COMMONWEALTH OF AUSTRALIA
PATENTS ACT 1952-1973
APPLICATION FOR A PATENT

SCHERING CORPORATION

2000 Galloping Hill Road, Kenilworth,
NEW JERSEY 07033, U.S.A.

hereby apply for a grant of a Patent for an invention entitled:

1,3-BIS(1H-1,2,4-TRIAZOL-1-YL)-2,4-DIFLUOR-2-(2,4-DIFLUOROPHENYL)
PROPANE, ANTIFUNGAL COMPOSITION CONTAINING IT, AND PROCESS
FOR PREPARATION OF THE COMPOUND AND THE COMPOSITIONS

which is described in the accompanying complete specification.
This Application is a Convention Application and is based on the
Application(s) numbered: 662,856

for a Patent or similar protection made in U.S.A.

on 19 October 1984

Our address for service is care of GRIFFITH HASSEL &
FRAZER, Patent Attorneys of 71 York Street, Sydney 2000,
in the State of New South Wales, Commonwealth of Australia.

Dated this 17th day of October 1985

SCHERING CORPORATION

By: [Signature]

GRIFFITH HASSEL & FRAZER

To: THE COMMISSIONER OF PATENTS
COMMONWEALTH OF AUSTRALIA
In support of an Application made by: SCHERING CORPORATION 2000 Galloping Hill Road Kenilworth, New Jersey 07033 U.S.A.

for a patent for an invention entitled: 1,3-BIS(1H-1,2,4-TRIAZOL-1-YL)-2-FLUORO-2-(2,4-DIFLUOROPHENYL)PROPANE, ANTIFUNGAL COMPOSITION CONTAINING IT, AND PROCESS FOR PREPARATION OF THE COMPOUND AND I, THE COMPOSITIONS.

Steinar V. Kanstad

of the applicant's address
do solemnly and sincerely declare as follows:

1. I am authorised by the above mentioned applicant for the patent to make this Declaration on its behalf.

2. The name and address of each actual inventor of the invention is as follows:
   Jagdish Armitial Desai, citizen of India, residing at 114 Stuyvesant Avenue, Jersey City, New Jersey 07306 U.S.A.; and
   Alan Bruce Cooper, citizen of the U.S.A., residing at 14 Aldon Circle West Caldwell, New Jersey 07006 U.S.A.

and the fact(s) upon which the applicant is entitled to make this application are as follows:

   The applicant is the assignee of the above mentioned inventors.

3. The basic application(s) as defined by Section 141 of the Act was(were) made as follows:

   Country: United States of America on October 19, 1984
   in the name(s) Jagdish Armitial Desai and Alan Bruce Cooper
   and in on
   in the name(s)
   and in on
   in the name(s)

4. The basic application(s) referred to in the preceding paragraph of this Declaration was(were) the first application(s) made in a Convention country in respect of the invention the subject of this application.

Declared at Madison this 4th day of October 1985.

SCHERING CORPORATION

Signed: Steinar V. Kanstad
Position: Director, International Patents

GRIFFITH HASSEL & FRAZER, P.O. BOX 2133, G.P.O., SYDNEY, NSW 2001
AUSTRALIA
The compound of the invention is useful in treating fungal infections.

Claim
1. 1,3-Bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl) propane or a pharmaceutically acceptable salt thereof.

SYDNEY, N.S.W. 2000, AUSTRALIA

Complete Specification for the invention entitled: 1,3-BIS(1H,2,4-TRIAZOL-1-YL)-2-FLUORO-2-(2,4-DIFLUOROPHENYL)PROPANE, ANTI FUNGAL COMPOSITION CONTAINING IT, AND PROCESS FOR PREPARATION OF THE COMPOUND AND THE COMPOSITIONS

The following statement is a full description of this invention, including the best method of performing it known to me:

Note: The description is to be typed in double spacing, pica type face, in an area not exceeding 250 mm in depth and 160 mm in width, on good quality paper and it is to be inserted inside this form.
1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane, antifungal composition containing it, and process for preparation of the compound and the composition

This invention relates to 1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane, an antifungal compound, pharmaceutical compositions containing it and their use in treating fungal infections in animals, including humans.

U.S. Patent 4,404,216 (Richardson) discloses that 1,3-bis(1H-1,2,4-triazol-1-yl)-2-(2,4-difluorophenyl)propan-2-ol and its pharmaceutically acceptable acid addition salts are useful for treating fungal infections in animals.

European Patent Application No. 96,569, published December 21, 1983, and assigned to Pfizer Limited, discloses 1,3-bis(1H-1,2,4-triazol-1-yl)-2-aryl-2-halopropane antifungal compounds which are generic to the compound of this invention. However, there is no specific disclosure of the compound of this invention.

The compound of this invention, 1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane, or a pharmaceutically acceptable salt thereof
possesses advantageous antifungal properties and low toxicity.

The present invention also provides pharmaceutical compositions comprising an effective antifungal amount of 1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or a pharmaceutically acceptable acid salt thereof, together with a pharmaceutically acceptable carrier or diluent. The pharmaceutical compositions of the present invention exhibit extended shelf-lifetime.

The present invention further provides a method of treating susceptible fungal infections which comprises administering to a host, e.g., a warm blooded animal such as man, in need of such treatment 1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or a pharmaceutically acceptable salt thereof, or a pharmaceutical composition comprising such a compound or a salt thereof, together with a pharmaceutically acceptable carrier or diluent.

The compound of this invention may be prepared by reacting 1,3-bis(1H-1,2,4-triazol-1-yl)-2-(2,4-difluorophenyl)propan-2-ol with an active fluorinating reagent such as SF₄ or N,N-diethylaminosulfur trifluoride (Et₂NSF₃) in a suitable organic solvent e.g., dry tetrahydrofuran (THF) or dry methylene chloride at a temperature of from about -10°C to the reflux temperature, preferably at about -10°C to 0°C optionally in the presence of a base. The product is isolated and purified in a conventional manner, e.g. by column chromatography. 1,3-Bis(1H-1,2,4-triazol-1-yl)-2-(2,4-difluorophenyl)-propan-2-ol is a known compound which may be prepared in accordance with the procedures disclosed in USP 4,404,216.

The compound of the present invention and ketoconazole, a present commercial antifungal product,
when tested in conventional antifungal screening tests, exhibited negligible in vitro activity against a large number of fungi in Sabourand broth medium but the compound of this invention exhibited significantly lower in vitro activity against six strains of Candida in Eagles medium compared to ketoconazole. The compound of this invention had a mean Minimum Inhibitory Concentration (MIC) of 4 mcg/mL after 48 hours; the MIC for ketoconazole was <0.031 mgc/mL. However, the compound of the present invention exhibited superior antifungal activity in in vivo tests in animals compared to ketoconazole. For example, in a mouse Candida albicans oral infection model, the preventive dosage of the compound of the present invention required for survival of 100% of the test animals was lower than that required for ketoconazole.

The present invention also provides a pharmaceutical composition comprising an effective antifungal amount of 1,3-bis(lH-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or a pharmaceutically acceptable salt thereof and a pharmaceutically acceptable carrier or diluent.

The preferred pharmaceutically acceptable salts are nontoxic acid addition salts and/or adducts formed by adding to the compound of the present invention about a stoichiometric amount of a mineral acid, such as HCl, HBr, H₂SO₄ or H₃PO₄ or of an organic acid, such as acetic, propionic, valeric, oleic, palmitic, stearic, lauric, benzoic, lactic, para-toluene sulfonic, methane sulfonic, citric, maleic fumaric, succinic and the like, respectively.

The pharmaceutical compositions of the present invention may be formulated by combining the compound of this invention or a pharmaceutically acceptable salt and/or adduct thereof with any suitable, i.e., inert,
pharmaceutical carrier or diluent adapted for administration orally, parentally or topically in a variety of formulations. The preferred mode of administration is oral.

Examples of suitable compositions include solid or liquid compositions for oral administration such as tablets, capsules, pills, powders, granules, solutions, suspensions or emulsions. They may also be manufactured in the form of sterile solid compositions which can be dissolved in sterile water, physiological saline or some other sterile injectable medium immediately before use.

Parenteral forms to be injected intravenously, intramuscularly, or subcutaneously are usually in the form of a sterile solution, and may contain salts or glucose to make the solution isotonic.

Based on the greater in vivo oral activity for the compound of this invention compared to ketoconazole, the dosage of the compound of the present invention employed to combat a given fungal infection in animals, e.g., man, is likely to be generally somewhat less than the dosage requirements of present commercial products such as ketoconazole.

In general, the dosage for man ranges from about 50 mg per day to about 800 per day, with about 100 mg to 400 mg per day in single or divided doses being preferred.

It will be appreciated that the actual preferred dosages of the compound of the present invention or pharmaceutically acceptable salts thereof will vary according to the particular composition formulated, the mode of application and the particular situs, host and disease being treated. Many factors that modify the action of the drug will be taken into account by the attending clinician, e.g., age, body weight, sex, diet, time of administration, rate of excretion, condition of
the host, drug combinations, reaction sensitivities and severity of the disease. Administration can be carried out continuously or periodically within the maximum tolerated dose. Optimal application rates for a given set of conditions can be readily ascertained by the attending clinician using conventional dosage determination tests.

The following Examples illustrate the invention.

**EXAMPLE 1**

1,3-Bis(1H-1,2,4-triazol-1-yl)-2-(2,4-difluorophenyl)-2-fluoro-propane

Dissolve 1,3-bis(1H-1,2,4-triazol-1-yl)-2-(2,4-difluorophenyl)propan-2-ol (4.76g, 15.5 mmole) in 125 mL of dry THF under a nitrogen atmosphere. Cool to 0° to -10°C in a methanol/ice bath. Add, dropwise N,N-diethylaminosulfur trifluoride (5.00 g, 31.0 mmole) over a period of 10 minutes. Stir the reaction mixture so formed for 3 hours. Carefully pour the reaction mixture into 500 mL of aqueous saturated NaHCO₃ solution. Extract with two 500 mL portions of CH₂Cl₂. Dry the separated CH₂Cl₂ layers over MgSO₄, filter and evaporate to give a solid residue. Chromatograph the residue on a silica gel column eluting with 1:99, v/v methanol:chloroform to obtain the title compound:

1H NMR (90 MHz, CDCl₃) : 8.09 (s,2H), 7.82 (s,2H), 7.4-6.6 (m,3H), 4.93 (dd,2H, J=18 and 15 Hz), 4.69 (s,2H)

Mass Spectrum, m/e (relative intensity): 55(88), 56(19), 82(72), 83(22), 119(27), 125(25), 127(96), 138(40), 139(38), 145(95), 152(65), 154(64), 158(98), 179(34), 181(100), 199(94), 219(90), 220(73), 226(65), 288(94), 289(20), and 308(M⁺,7).
EXAMPLE 2

The following are typical pharmaceutical formulations containing as the active ingredient (designated "Drug") the compound of this invention.

**FORMULATION 1**

<table>
<thead>
<tr>
<th>Ingredient</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tablet 125.00 mg. tab.</td>
<td></td>
</tr>
<tr>
<td>Drug</td>
<td>125.00 mg.</td>
</tr>
<tr>
<td>Polyethylene glycol 6000</td>
<td>100.00 mg.</td>
</tr>
<tr>
<td>Sodium lauryl sulfate</td>
<td>6.25 mg.</td>
</tr>
<tr>
<td>Corn starch</td>
<td>30.00 mg.</td>
</tr>
<tr>
<td>Lactose, anhydrous</td>
<td>87.25 mg.</td>
</tr>
<tr>
<td>Magnesium stearate</td>
<td>1.50 mg.</td>
</tr>
</tbody>
</table>

**Procedure:**

Heat the polyethylene glycol 6000 to 70-80°C. Mix the drug, sodium lauryl sulfate, corn starch, and lactose into the liquid and allow the mixture to cool. Pass the solidified mixture through a mill. Blend granules with magnesium stearate and compress into tablets.

**FORMULATION 2**

<table>
<thead>
<tr>
<th>Ingredient</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capsule 250 mg. tab.</td>
<td></td>
</tr>
<tr>
<td>Drug</td>
<td>250.00 mg.</td>
</tr>
<tr>
<td>Lactose, anhydrous</td>
<td>100.00 mg.</td>
</tr>
<tr>
<td>Corn starch</td>
<td>50.00 mg.</td>
</tr>
<tr>
<td>Microcrystalline cellulose</td>
<td>95.00 mg.</td>
</tr>
<tr>
<td>Magnesium stearate</td>
<td>5.00 mg.</td>
</tr>
</tbody>
</table>
Procedure:

Mix the first four ingredients in a suitable mixer for 10-15 minutes. Add the magnesium stearate and mix for 1-3 minutes. Fill the mixture into suitable two-piece hard gelatin capsules using an encapsulating machine.
CLAIMS
The claims defining the invention are as follows:

1. 1,3-Bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or a pharmaceutically acceptable salt thereof.

2. 1,3-Bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or a pharmaceutically acceptable salt thereof as claimed in claim 1 for use in the treatment of fungal infections.

3. A process for the preparation of 1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or pharmaceutically acceptable salts thereof as claimed in claim 1 or 2, characterized in that 1,3-bis(1H-1,2,4-triazol-1-yl)-2-(2,4-difluorophenyl)propan-2-ol is reacted with a fluorinating reagent followed by isolating the product in the free form or in the form of its pharmaceutically acceptable salt.

4. Process according to claim 3, characterized in that SF₄ or N,N-diethylaminosulfur trifluoride is used as fluorinating agent.

5. Pharmaceutical composition containing as active ingredient 1,3-bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-difluorophenyl)propane or a pharmaceutically acceptable salt thereof together with a pharmaceutical carrier or excipient.

6. Composition according to claim 5 in form suitable for oral administration.
7. A process for the preparation of 1,3-Bis(1H-1,2,4-triazol-1-yl)-2-fluoro-2-(2,4-
difluorophenyl)propane substantially as disclosed in Example 1.

8. Pharmaceutical composition
substantially as disclosed in Formulation 1 or 2.
