The present invention is concerned with novel compounds of formula (I) having HIV replication inhibiting properties. The invention further relates to methods for preparing such novel compounds, pharmaceutical compositions comprising said novel compounds as well as the use as a medicine of said compounds.

Unexpectedly, it has now been found that the compounds of formula (I) effectively inhibit the replication of the Human Immunodeficiency Virus (HIV) and consequently may be useful for the treatment of individuals infected by HIV.

The present invention concerns the use of compounds of formula

![Chemical Structure]

the pharmaceutically acceptable acid addition salts and the stereochemically isomeric forms thereof, wherein

R1 and R2 are each independently selected from hydrogen; hydroxy; amino; C1-6 alkyl; C1-6 alkoxy; C1-6 alkylcarbonyl; C1-6 alkoxy carbonyl; Ar1; mono- or di(C1-6 alkyl) amino; mono- or di(C1-6 alkyl)aminocarbonyl; dihydro-2(3H)-furanone; C1-6 alkyl substituted with one or two substituents each independently selected from amino, imino, aminocarbonyl, aminocarbonylamino, hydroxy, hydroxy C1-6 alkoxy, carboxyl, mono- or di(C1-6 alkyl) amino, C1-6 alkoxy carbonyl and thienyl; or

R1 and R2 taken together may form pyrrolidinyl, piperidinyl, morpholinyl, azido or mono- or di(C1-6 alkyl) amino C3-4 alkyldiene;

R3 is hydrogen, Ar1, C1-6 alkyl carbonyl, C1-6 alkyl, C1-6 alkoxy carbonyl, C1-6 alkyl substituted with C1-6 alkoxy carbonyl; and

R4, R5, R6, R7 and R8 are each independently selected from hydrogen, hydroxy, halo, C1-6 alkyl, C1-6 alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl or trihalomethyloxy;

L is C1-10 alkyl; C3-10 alkenyl; C3-10 alkynyl; C3-7 cycloalkyl; or

L is C1-10 alkyl substituted with one or two substituents independently selected from

a) C3-7 cycloalkyl;

b) indolyl or indolyl substituted with one, two, three or four substituents each independently selected from halo, C1-6 alkyl, C1-6 alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C1-6 alkoxy carbonyl;

c) phenyl or phenyl substituted with one, two, three, four or five substituents each independently selected from halo, hydroxy, C1-6 alkyl, C1-6 alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C1-6 alkoxy carbonyl; and,

Ar1 is phenyl, or phenyl substituted with one, two or three substituents each independently selected from halo, C1-6 alkyl, C1-6 alkoxy, cyano, nitro or trifluoromethyl; for the manufacture of a medicine for the treatment of subjects suffering from HIV (Human Immunodeficiency Virus) infection.
This invention also concerns novel compounds of formula (I) or (I'), both in pure form or in admixture with each other are intended to be embraced within the pharmaceutically acceptable acid addition salts and the stereochemically isomeric forms thereof, wherein the substituents are as defined under formula (I); with the proviso that R^6 is cyano or aminocarbonyl.

As used in the foregoing definitions and hereinafter halo defines fluoro, chloro, bromo and iodo; C_{1-2}alkyl includes methyl and ethyl; C_{1-3}alkyl defines straight and branched chained saturated hydrocarbon radicals having from 1 to 3 carbon atoms such as, for example, methyl, ethyl, propyl and the like; C_{1-4}alkyl encompasses the straight and branched chained saturated hydrocarbon radicals as defined in C_{1-3}alkyl as well as the higher homologues thereof containing 4 carbon atoms such as, for example, butyl and the like; C_{1-6}alkyl encompasses the straight and branched chained saturated hydrocarbon radicals as defined in C_{1-4}alkyl as well as the higher homologues thereof containing 5 or 6 carbon atoms such as, for example pentyl or hexyl; C_{2-6}alkyl defines straight and branched chained saturated hydrocarbon radicals having from 3 to 6 carbon atoms such as, for example, propyl, butyl, pentyl, hexyl and the like; C_{2-6}alkyl encompasses the straight and branched chained saturated hydrocarbon radicals as defined in C_{1-6}alkyl as well as the higher homologues thereof containing 7 to 10 carbon atoms such as, for example heptyl, octyl, nonyl or decyl; C_{1-10}alkylidene defines bivalent straight and branched chained hydrocarbons having from 1 to 4 carbon atoms such as, for example, methylene, ethylenedi, propylened, butylened and the like; C_{3-7}cycloalkyl defines generic to cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl and cycloheptyl; C_{3-10}alkenylnyl defines straight and branch chained hydrocarbon radicals containing one double bond and having from 3 to10 carbon atoms such as, for example, 2-propenyl, 2-butenyl, 2-pentenyl, 3-pentenyl, 3-methyl-2-butynyl, 3-hexenyl, 2-octynyl, 2-nononyl, 2-decenyln and the like, whereby the carbon atom attached to the triazine ring is preferably an aliphatic carbon atom; C_{3-10}alkynyl defines straight and branch chained hydrocarbon radicals containing one triple bond and having from 3 to 10 carbon atoms such as, for example, 2-propynyl, 2-butylnyl, 2-pentylnyl, 3-pentylnyl, 3-methyl-2-butynyl, 3-hexynyl, 3-heptynylnyl, 2-octynyl, 2-nononylnyl, 2-decynyl and the like, whereby the carbon atom attached to the triazine ring is preferably an aliphatic carbon atom; C_{1-6}alkanediylnyl defines bivalent straight and branched chained saturated hydrocarbon radicals having from 1 to 6 carbon atoms, such as, for example, methylene, 1,2-ethanedi, 1,3-propanedi, 1,4-butanedi, 1,5-pentanedi, 1,6-hexanediyl and the branched isomers thereof.

The pharmaceutically acceptable acid addition salts as mentioned hereinabove are meant to comprise the therapeutically active non-toxic acid addition salt forms which the compounds of formula (I) or (I') are able to form. The compounds of formula (I) or (I') which have basic properties can be converted in their pharmaceutically acceptable acid addition salts by treating said base form with an appropriate acid. Appropriate acids comprise, for example, inorganic acids such as hydrohalic acids, e.g. hydrochloric or hydrobromic acid; sulfuric; nitric; phosphoric and the like acids; or organic acids such as, for example, acetic, propanoic, hydroxyacetic, lactic, pyruvic, oxalic, malonic, succinic (i.e. butanedioic acid), maleic, fumaric, malic, tartaric, citric, methanesulfonic, ethanesulfonic, benzenesulfonic, p-toluenesulfonic, cycloaliphatic, salicylic, p-amino-salicylic, pamoic and the like acids.

The term addition salts also comprises the hydrates and the solvent addition forms which the compounds of formula (I) or (I') are able to form. Examples of such forms are e.g. hydrates, alcolholates and the like.

The term stereochemically isomeric forms of compounds of formula (I) or (I'), as used hereinbefore, defines all possible compounds made up of the same atoms bonded by the same sequence of bonds but having different three-dimensional structures which are not interchangeable, which the compounds of formula (I) or (I') may possess. Unless otherwise mentioned or indicated, the chemical designation of a compound encompasses the mixture of all possible stereochemically isomeric forms which said compound may possess. Said mixture may contain all diastereomers and/or enantiomers of the basic molecular structure of said compound. All stereochemically isomeric forms of the compounds of formula (I) or (I') both in pure form or in admixture with each other are intended to be embraced within the
Some of the compounds of formula (I) or (I’) may also exist in their tautomeric forms. Such forms although not explicitly indicated in the above formula are intended to be included within the scope of the present invention.

Whenever used hereinafter, the term “compounds of formula (I) or (I’)” is meant to include also the pharmaceutically acceptable acid addition salts and all stereoisomeric forms.

A special group of compounds are the compounds of formula (I-P) and include those compounds of formula (I) or (I’) wherein

R<sub>1</sub> and R<sub>2</sub> are each independently selected from hydrogen, C<sub>1-6</sub>alkyl, Ar<sup>1</sup> or mono- or di(C<sub>1-6</sub>alkyl)aminocarbonyl; or

R<sub>1</sub> and R<sub>2</sub> taken together may form pyrrolidinyl, piperidinyl or morpholinyl;

R<sup>3</sup> is hydrogen, C<sub>1-6</sub>alkyl or Ar<sup>1</sup>; and

Ar<sup>1</sup> is phenyl, or phenyl substituted with 1, 2 or 3 substituents each independently selected from halo, C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, nitro or trifluoromethyl; and

L is a radical of formula

\[-\text{CH}=\text{CH}-\text{NR}^9-\]  \hspace{1cm} (a-1),

\[-\text{NR}^9-\text{CH}=\text{CH}-\]  \hspace{1cm} (a-2),

wherein Alk is C<sub>1-6</sub>alkanediyl;

R<sub>a</sub>, R<sub>b</sub>, R<sub>c</sub>, R<sub>d</sub>, R<sub>e</sub>, R<sub>f</sub>, R<sub>g</sub>, R<sub>j</sub>, R<sub>k</sub>, R<sub>l</sub>, R<sub>m</sub>, R<sub>n</sub>, R<sub>o</sub> are each independently selected from hydrogen, halo, C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, amino, trihalomethyl or trihalomethyloxy; or

R<sub>a</sub> and R<sub>b</sub> taken together may form a bivalent radical of formula

\[-\text{NR}^9-\text{CH}=\text{CH}_{\text{a}-1}\]  \hspace{1cm} (a-3),

\[-\text{CH}=\text{CH}_{\text{a}-2}\]  \hspace{1cm} (a-4),

[0014] Interesting compounds are those compounds of formula (I’) wherein NR<sub>1</sub>R<sub>2</sub> is other than amino.

[0015] Other interesting compounds are those compounds of formula (I’) wherein L is C<sub>1-10</sub>alkyl; C<sub>3-10</sub>alkenyl; C<sub>3-10</sub>alkynyl; C<sub>3-7</sub>cycloalkyl; or L is C<sub>1-10</sub>alkyl substituted with one or two substituents independently selected from

a) C<sub>3-7</sub>cycloalkyl;
b) indolyl or indolyl substituted with one, two, three or four substituents each independently selected from halo, C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C<sub>1-6</sub>alkylcarbonyl;
c) phenyl substituted with one, two, three, four or five substituents each independently selected from halo, C<sub>1-6</sub>alkyl, C<sub>3-6</sub>alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C<sub>1-6</sub>alkylcarbonyl.

[0016] Still other interesting compounds are those compounds of formula (I) wherein one of the following restrictions apply:

i) R<sub>4</sub> is hydroxy, halo, C<sub>2-6</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, amino, trihalomethyl or trihalomethyloxy; or

ii) R<sub>5</sub> is hydroxy, halo, C<sub>1-3</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, nitro, amino, or trihalomethyloxy; or

iii) R<sub>6</sub> is C<sub>2-6</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, nitro, trihalomethyl or trihalomethyloxy; or

iv) R<sub>7</sub> is hydroxy, halo, C<sub>1-3</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl or trihalomethyloxy; or

v) R<sub>8</sub> is hydroxy, halo, C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl or trihalomethyloxy.
Particular compounds are those compounds of formula (I) or (I') wherein L is C₃₋₁₀ alkenyl or C₁₋₂ alkyl substituted with one or two substituents independently selected from:

- a) C₃₋₇ cycloalkyl;
- b) indolyl or indolyl substituted with one, two, three or four substituents each independently selected from halo, C₁₋₆ alkyloxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethoxy, C₁₋₆ alkylcarbonyl;
- c) phenyl or phenyl substituted with one, two, three, four or five substituents each independently selected from halo, hydroxy, C₁₋₆ alkyl, C₁₋₆ alkyloxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethoxy, C₁₋₆ alkylcarbonyl;

more in particular, wherein L is C₅₋₈ alkenyl or C₁₋₂ alkyl substituted with one or two substituents independently selected from:

- a) cyclopentyl;
- b) indolyl or indolyl substituted with halo;
- c) phenyl or phenyl substituted with one, two, three, four or five substituents each independently selected from halo, hydroxy, C₁₋₆ alkyl, C₁₋₆ alkyloxy, trihalomethyl, trihalomethoxy, C₁₋₆ alkylcarbonyl.

Also particular compounds are those compounds of formula (I) or (I') wherein R₄, R₇ and R₈ are hydrogen and R₅ and R₆ each independently are hydrogen, cyano, halo or aminocarbonyl; more in particular, wherein R₄, R₅, R₇ and R₈ are hydrogen and R₆ is cyano.

Other particular compounds are those compounds of formula (I) or (I') wherein R¹ and R² are each independently selected from hydrogen; hydroxy; amino; C₁₋₆ alkyl; C₁₋₆ alkyloxy; C₁₋₆ alkylcarbonyl; C₁₋₆ alkyloxy carbonyl; Ar¹; mono- or di(C₁₋₆ alkyl)-aminocarbonyl; dihydro-2(3H)-furanone; C₁₋₆ alkyl substituted with one or two substituents each independently selected from amino, imino, aminocarbonyl, aminocarbonylamino, hydroxy, hydroxyC₁₋₆ alkyl, carbonyl, mono- or di(C₁₋₆ alkyl)amino, C₁₋₆ alkyloxy carbonyl and thiényl; or R¹ and R² taken together form azido or mono- or di(C₁₋₆ alkyl)aminoC₁₋₆ alkylidene; more in particular wherein R¹ is hydrogen and R² is hydrogen; hydroxy; amino; C₁₋₆ alkyl; C₁₋₆ alkyloxy; C₁₋₆ alkylcarbonyl; C₁₋₆ alkyloxy carbonyl; Ar¹; mono- or di(C₁₋₆ alkyl)aminocarbonyl; dihydro-2(3H)-furanone; C₁₋₆ alkyl substituted with one or two substituents each independently selected from amino, imino, aminocarbonyl, aminocarbonylamino, hydroxy, hydroxyC₁₋₆ alkyl, carbonyl, mono- or di(C₁₋₆ alkyl)amino, C₁₋₆ alkyloxy carbonyl or thiényl.

A preferred group of compounds are those compounds of formula (I) or (I') wherein L is 2,6-dichlorophenylmethyl.

Another preferred group of compounds are those compounds of formula (I) or (I') wherein R¹ is hydrogen, R², R₅, R₇ and R₈ are hydrogen and R₆ is cyano.

Yet another group of preferred compounds are those compounds of formula (I) or (I') wherein R¹ is hydrogen and R² is hydrogen or hydroxy.

More preferred are those compounds or formula (I) or (I') wherein L is 2,6-dichlorophenylmethyl, R¹ is hydrogen, R², R₅, R₇ and R₈ are hydrogen and R₆ is cyano.

Most preferred compounds are:

- 4-[[4-amino-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]amino]benzonitrile;
- 4-[[4-[(2,6-dichlorophenyl)methyl]-6-(hydroxyamino)-1,3,5-triazin-2-yl]amino]benzonitrile and the pharmaceutically acceptable acid addition salts thereof.

In general, compounds of formula (I) can be made according to the methods described in DE-2,121,694, DE-2,226,474 and Guioca, Ann. Pharm. Fr., 31:283 - 292 (1973).

The compounds of formula (I-a), being compounds of formula (I) wherein R¹ and R² are hydrogen, can be prepared by reacting an intermediate of formula (II) with an intermediate of formula (III) in a reaction-inert solvent such as, e.g. N,N-dimethyl-formamide.
Compounds of formula (I-b), being compounds of formula (I) wherein R₃ is hydrogen, can be prepared by reacting an intermediate of formula (IV) with an intermediate of formula (V) in a reaction-inert solvent such as, e.g. N,N-dimethylformamide.

Compounds of formula (I) wherein L is C₁₋₁₀ alkyl substituted with indolyl or indolyl substituted with one, two, three or four substituents each independently selected from halo, C₁₋₆ alkyl, C₁₋₆ alkyloxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C₁₋₆ alkylcarbonyl, said substituents being represented by (R')ₙ whereby n is 1 to 4 and said compounds being represented by formula (I-c), may be prepared by deprotecting an intermediate of formula (VI) wherein P is a suitable protecting group such as, for example, a toluenesulfonyloxy group or the like, according to art-known deprotection techniques such as refluxing in a reaction-inert solvent, e.g. water, methanol or a mixture thereof, in the presence of a base, e.g. potassium carbonate or the like.

Compounds of formula (I) wherein R¹ is hydrogen, said compounds being represented by formula (I-d), can be prepared by reacting an intermediate of formula (VII) wherein W¹ is a suitable leaving group such as, for example, a halogen, with an amino derivative of formula (VIII) in a reaction inert solvent such as, for example, 1,4-dioxane and the like, in the presence of a suitable base such as, for example, sodiumhydroxide, triethylamine or N,N-diisopropyl-ethylamine or the like.
In case R² contains a hydroxy moiety, it may be convenient to perform the above reaction with a protected form of intermediate (VIII) whereby the hydroxy moiety bears a suitable protecting group P being, for instance, a trialkysilyl group, and subsequently removing the protective group according to art-known methodologies.

Compounds of formula (I) whereby R¹ and R³ are hydrogen and R² and the C₆ (R⁴ R⁵ R⁶ R⁷ R⁸) moiety are identical, said compounds being represented by formula (I-e), may be prepared by reacting an intermediate of formula (IX) wherein W² is a suitable leaving group such as, for example, a halogen or the like, with an intermediate of formula (X) in a reaction inert solvent such as, for example, 1,4-dioxane.

Compounds of formula (I) wherein R¹ and R² are other than hydrogen and are being represented by R¹' and R²' respectively, said compounds being represented by formula (I-f-1), can be prepared by reacting an intermediate of formula (XI) with an intermediate of formula (XII) wherein W³ is a suitable leaving group such as, for example, a halogen, in a reaction-inert solvent such as, for example, N,N-dimethyl-formamide or N,N-dimethylacetamide, and in the presence of a suitable base such as, for example, sodium hydride or potassium carbonate.

In case intermediate (XII) is limited to W³-Ar¹ (XII-b) and R³ is hydrogen, the reaction time may be adjusted to form the disubstituted analogues being represented by formula (I-f-2)
[0034] The compounds of formula (I) may further be prepared by converting compounds of formula (I) into each other according to art-known group transformation reactions.

[0035] For instance, compounds of formula (I-a) may be reacted with an anhydride of formula (XIII) wherein R is defined such that -C(=O)-R is part of the definition of R₁ or R₂, according to the method described in Arch. Pharm. (Waldheim) 1986, 319, 275, thus forming compounds of formula (I-g). In this reaction, the reflux time is critical; longer times led to lower yield of the monosubstituted endproducts and increased formation of di- and where possible, trisubstituted endproducts.

* : only in case R³ is hydrogen

[0036] Compounds of formula (I-a) can also be reacted with a reagent of formula (XIV) in a reaction-inert solvent such as, for example, N,N-dimethylformamide, in the presence of a base such as, for example, sodium hydride.
Some of the intermediates as mentioned hereinabove are commercially available or can be prepared according to art-known procedures, while other intermediates are deemed novel.

Intermediates of formula (II) can be prepared by reacting a cyano derivative of formula (XV) with ammonium chloride (XVI) or a functional derivative thereof in a reaction-inert solvent such as, for example, toluene, and in the presence of a suitable catalyst such as, for example, trimethylaluminium.

Intermediates of formula (III) can generally be made by reacting diphenyl N-cyano-carbonimidate of formula (XVII), which can be prepared according to Webb R.L. et al., *J. Heterocyclic Chem.*, 19:1205-1206 (1982), with an aniline derivative of formula (XVIII) in a reaction-inert solvent such as, e.g. N,N-dimethylformamide.

Intermediates of formula (VII) can be prepared by first making a Grignard reagent of an intermediate of formula (XIX) wherein $W_4$ is a suitable leaving group such as, for example, a halogen, e.g. bromine, in the presence of magnesium in a reaction-inert solvent such as, for example, diethyl ether, and subsequently reacting said Grignard reagent with an intermediate of formula (XX) wherein $W_5$ is a suitable leaving group such as, for example, a halogen, e.g. chlorine, in a reaction-inert solvent such as, for example, benzene, thus forming an intermediate of formula (XXI). It may be convenient to perform the above reaction under a inert atmosphere such as, for instance, argon. Intermediate (XXI) may be isolated from its reaction medium, or may be *in situ* further reacted with an intermediate of formula (XXII) in a reaction-inert solvent such as, for example, 1,4-dioxane, and in the presence of a suitable base such as, for example, disopropylethamine or the like, thus forming an intermediate of formula (VII). The intermediates of formula (VII) are deemed novel.
Intermediates of formula (XI) can be prepared by reacting an intermediate of formula (XXIII) with an intermediate of formula (XXIV) in a reaction-inert solvent such as, for example, N,N-dimethylformamide.

Compounds of formula (I) and some of the intermediates may have one or more stereogenic centers in their structure, present in a R or a S configuration.

The compounds of formula (I) as prepared in the hereinabove described processes may be synthesized as a mixture of stereoisomeric forms, in particular in the form of racemic mixtures of enantiomers which can be separated from one another following art-known resolution procedures. The racemic compounds of formula (I) may be converted into the corresponding diastereomeric salt forms by reaction with a suitable chiral acid. Said diastereomeric salt forms are subsequently separated, for example, by selective or fractional crystallization and the enantiomers are liberated therefrom by alkali. An alternative manner of separating the enantiomeric forms of the compounds of formula (I) involves liquid chromatography using a chiral stationary phase. Said pure stereochemically isomeric forms may also be derived from the corresponding pure stereochemically isomeric forms of the appropriate starting materials, provided that the reaction occurs stereospecifically. Preferably if a specific stereoisomer is desired, said compound will be synthesized by stereospecific methods of preparation. These methods will advantageously employ enantiomerically pure starting materials.

The compounds of formula (I) show antiretroviral properties, in particular against Human Immunodeficiency Virus (HIV), which is the aetiologic agent of Acquired Immune Deficiency Syndrome (AIDS) in humans. The HIV virus preferentially infects human T-4 cells and destroys them or changes their normal function, particularly the coordination of the immune system. As a result, an infected patient has an everdecreasing number of T-4 cells, which moreover behave abnormally. Hence, the immunological defense system is unable to combat infections and neoplasms and the HIV infected subject usually dies by opportunistic infections such as pneumonia, or by cancers. Other conditions associated with HIV infection include thrombocytopenia, Kaposi's sarcoma and infection of the central nervous system characterized by progressive demyelination, resulting in dementia and symptoms such as, progressive dysarthria, ataxia and disorientation. HIV infection further has also been associated with peripheral neuropathy, progressive generalized lymphadenopathy (PGL) and AIDS-related complex (ARC).

The present compounds also show activity against HIV-1 strains that have acquired resistance to art-known non-nucleoside reverse transcriptase inhibitors. They also have little or no binding affinity to human α-1 acid glycoprotein.

Due to their antiretroviral properties, particularly their anti-HIV properties, especially their anti-HIV-1-activity, the compounds of formula (I), their pharmaceutically acceptable salts and the stereochemically isomeric forms thereof, are useful in the treatment of individuals infected by HIV and for the prophylaxis of these individuals. In general, the compounds of the present invention may be useful in the treatment of warm-blooded animals infected with viruses whose existence is mediated by, or depends upon, the enzyme reverse transcriptase. Conditions which may be prevented or treated with the compounds of the present invention, especially conditions associated with HIV and other
pathogenic retroviruses, include AIDS, AIDS-related complex (ARC), progressive generalized lymphadenopathy (PGL), as well as chronic CNS diseases caused by retroviruses, such as, for example HIV mediated dementia and multiple sclerosis.

The compounds of the present invention therefore may be used as medicines against above-mentioned conditions. Said use as a medicine or method of treatment comprises the systemic administration to HIV-infected subjects of an amount effective to combat the conditions associated with HIV and other pathogenic retroviruses, especially HIV-1.

The subject compounds may be formulated into various pharmaceutical forms for administration purposes. Said pharmaceutical forms or compositions are deemed novel and consequently constitute another aspect of the present invention. Also the preparation of said compositions constitutes a further aspect of the present invention. As appropriate compositions there may be cited all compositions usually employed for systemically administering drugs. To prepare the pharmaceutical compositions of this invention, an effective amount of the particular compound, optionally in acid addition salt form, as the active ingredient is combined in intimate admixture with a pharmaceutically acceptable carrier, which carrier may take a wide variety of forms depending on the form of preparation desired for administration. These pharmaceutical compositions are desirable in unitary dosage form suitable, particularly, for administration orally, rectally, percutaneously, or by parenteral injection. For example, in preparing the compositions in oral dosage form, any of the usual pharmaceutical media may be employed such as, for example, water, glycols, oils, alcohols and the like in the case of oral liquid preparations such as suspensions, syrups, elixirs and solutions; or solid carriers such as starches, sugars, kaolin, lubricants, binders, disintegrating agents and the like in the case of powders, pills, capsules, and tablets. Because of their ease in administration, tablets and capsules represent the most advantageous oral dosage unit forms, in which case solid pharmaceutical carriers are obviously employed. For parenteral compositions, the carrier will usually comprise sterile water, at least in large part, though other ingredients, for example, to aid solubility, may be included. Injectable solutions, for example, may be prepared in which the carrier comprises saline solution, glucose solution or a mixture of saline and glucose solution. Injectable suspensions may also be prepared in which case appropriate liquid carriers, suspending agents and the like may be employed. Also included are solid form preparations which are intended to be converted, shortly before use, to liquid form preparations. In the compositions suitable for percutaneous administration, the carrier optionally comprises a penetration enhancing agent and/or a suitable wetting agent, optionally combined with suitable additives of any nature in minor proportions, which additives do not introduce a significant deleterious effect on the skin.

It is especially advantageous to formulate the aforementioned pharmaceutical compositions in dosage unit form for ease of administration and uniformity of dosage. Dosage unit form as used herein refers to physically discrete units suitable as unitary dosages, each unit containing a predetermined quantity of active ingredient calculated to produce the desired therapeutic effect in association with the required pharmaceutical carrier. Examples of such dosage unit forms are tablets (including scored or coated tablets), capsules, pills, powder packets, wafers, injectable solutions or suspensions and the like, and segregated multiples thereof.

Those of skill in the treatment of HIV-infection could determine the effective daily amount from the test results presented here. In general it is contemplated that an effective daily amount would be from 0.01 mg/kg to 50 mg/kg body weight, more preferably from 0.1 mg/kg to 10 mg/kg body weight. It may be appropriate to administer the required dose as two, three, four or more sub-doses at appropriate intervals throughout the day. Said sub-doses may be formulated as unit dosage forms, for example, containing 1 to 1000 mg, and in particular 1 to 200 mg of active ingredient per unit dosage form.

The exact dosage and frequency of administration depends on the particular compound of formula (I) used, the particular condition being treated, the severity of the condition being treated, the age, weight and general physical condition of the particular patient as well as other medication the individual may be taking, as is well known to those skilled in the art. Furthermore, it is evident that said effective daily amount may be lowered or increased depending on the response of the treated subject and/or depending on the evaluation of the physician prescribing the compounds of the instant invention. The effective daily amount ranges mentioned hereinabove are therefore only guidelines and are not intended to limit the scope or use of the invention to any extent.

Also, the combination of an antiretroviral compound and a compound of formula (I) can be used as a medicine. Thus, the present invention also relates to a product containing (a) a compound of formula (I), and (b) another antiretroviral compound, as a combined preparation for simultaneous, separate or sequential use in anti-HIV treatment. The different drugs may be combined in a single preparation together with pharmaceutically acceptable carriers. Said other antiretroviral compounds may be known antiretroviral compounds such as nucleoside reverse transcriptase inhibitors, e.g. zidovudine (3’-azido-3’-deoxythymidine, AZT), didanosine (dideoxyinosine; ddI), zalcitabine (dideoxycytidine, ddC) or lamivudine (3’-thia-2’-3’-dideoxycytidine, 3TC) and the like; non-nucleoside reverse transcriptase inhibitors such as suramin, pentamidine, thymopentin, castanospermine, dextran (dextran sulfate), foscarnet-sodium (trisodium phosphonoformate), nevirapine (11-cyclopropyl-5,11-dihydro-4-methyl-6H-dipyrido[3,2-b:2’,3’-e][1,4]diazepin-6-one), tacrine (tetrahydro-aminoacridine) and the like; compounds of the TIBO (tetrahydro-imidazo[4,5,1-jk][1,4]-benzodiazepine-2(1H)-one and thione)-type e.g. (S)-8-chloro-4,5,6,7-tetrahydro-5-methyl-6-(3-methyl-2-buteny1)imidazole...
zo-[4,5,1-jk][1,4]benzodiazepine-2(1H)-thione; compounds of the α-APA (α-anilino phenyl acetamide) type e.g. α-[(2-nitro-phenyl)amino]-2,6-dichlorobenzene-acetamide and the like; TAT-inhibitors, e.g. RO-5-3335 and the like; protease inhibitors e.g. indinavir, ritonavir, saquinovir and the like; or immunomodulating agents, e.g. levamisole and the like.

The following examples are intended to illustrate and not to limit the scope of the present invention.

Experimental part

Hereinafter "RT" means room temperature, "DCM" means dichloromethane, "DMF" means N,N-dimethylformamide and "ACN" means acetonitrile.

A. Preparation of the intermediates

Example A.1

a) A mixture of 4-cyano-aniline (2.48 g) and diphenyl N-cyano-carbonimidate (5.0 g) in DMF (25 ml) was stirred for 20 hours at 110°C under argon flow. Water was added and the resulting precipitate was filtered off, to give a brownish solid. This fraction was recrystallized from ACN. The precipitate was filtered off and dried, yielding 1.67 g (30%) of phenyl N'-cyano-N-(4-cyanophenyl)carbamimidate (intermediate 1). In a similar way, phenyl N'-cyano-N-(3-cyanophenyl)carbamimidate (intermediate 2); phenyl N'-cyano-N-(4-chlorophenyl)carbamimidate (intermediate 3) and O-phenyl N'-cyano-N,N-dimethylcarbamimidate (intermediate 7) were prepared.

b) A mixture of intermediate (7) (0.01746 mol) and 2,6-dichloro-benzene-ethanimidamide (0.01746 mol) in DMF (30 ml) was stirred for 24 hours at 85°C. After cooling, the reaction mixture was quenched with H₂O and the precipitate was filtered off and dried, yielding 5.00 g (96.0%) of 6-[(2,6-dichlorophenyl)methyl]-N₂-dimethyl-1,3,5-triazine-2,4-diamine (intermediate 31).

Example A.2

a) A mixture of NH₄Cl (2.55 g) in toluene (100 ml) was stirred and cooled in an ice bath under argon flow. Al(CH₃)₃/toluene (23.9 ml; 2.0 M) was added and the resulting mixture was stirred for 1.5 hours at RT. 5-Chloro-1-[(4-methylphenyl)sulfonyl]-1H-indole-4-acetonitrile, which can be prepared according to Matsumoto et al., Heterocycles, 24(11), 3157 - 3162 (1986), (3.0 g) was added and the reaction mixture was stirred for 24 hours at 80°C. Then, the reaction mixture was poured into a slurry of 96 g of silica gel in DCM (200 ml), stirred, filtered, and the filter cake was washed with methanol (400 ml), and evaporated to give 5.35 g of white solid. The solid was dissolved in DCM, washed with 3 N NaOH, dried with potassium carbonate, filtered, and the filtrate was evaporated, yielding 2.80 g (89%, white solid) of 5-chloro-1-[(4-methylphenyl)sulfonyl]-1H-indole-4-ethanimidamide (intermediate 4).

b) A mixture of intermediate (4) (2.61 g) and intermediate (1) (1.89 g) in DMF (25 ml) was stirred for 24 hours at 65°C under argon flow. Water was slowly added and the precipitate filtered to give 3.55 g of an off-white solid. The solid was stirred in refluxing ACN, cooled and filtered to give 2.54 g (66%) of white solid. A 0.30 g sample was recrystallized in methanol. The precipitate was filtered off and dried, yielding 0.28 g (62%, white solid) of 4-[[4-amino-6-[(4-cyanoanilino)amino]-1,3,5-triazin-2-yl]methyl]-5-chloro-1-[(4-methylphenyl)sulfonyl]-1H-indole (intermediate 5). Table 1 lists intermediates which were prepared according to the procedure described in example A.2a.
Example A.3

[0057] Iodomethane (1.76 ml) was added to 4-cyanophenyl-thiourea (5.0 g) in acetone (100 ml). The reaction mixture was stirred overnight at RT. The precipitate was filtered off, dried and dissolved in DCM. The organic solution was washed with NH₃ (aq.) (excess), dried with potassium carbonate, filtered, and the solvent was evaporated, yielding 4.53 g (84%, white solid) of methyl N'-(4-cyanophenyl)-carbamimidothioate (intermediate 6).

Example A.4

[0058] a) A solution of 2-(bromomethyl)-1,3-dichlorobenzene (about 10% of 0.383 mol) in diethylether (240 ml) was added to magnesium (0.383 mol) in diethylether (240 ml) under argon. Once the reaction started, the remainder of 2-(bromomethyl)-1,3-dichlorobenzene in diethylether was added. The solution was stirred at RT for 2.5 hours and then added via canula to a solution of 2,4,6-trichloro-1,3,5-triazine (0.319 mol) in benzene (480 ml) while keeping the temperature below 15 °C. The reaction mixture was stirred for one hour in an ice bath, then for 2 hours at RT. A solution of 4-amino-benzonitrile (0.351 mol) in N,N-diisopropylethylamine (61.0 ml) and 1,4-dioxane (500 ml) was added and the reaction mixture was stirred at RT for 40 hours. The solvent was evaporated. Water and ethylacetate were added. The solution was stirred, then the solid was filtered off, washed with ethylacetate and water, yielding 129.9 g of 4-[4-chloro-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]-amino]benzonitrile (intermediate 27; mp. 243-244° C).

In a similar way, 4-[4-chloro-6-[(2,4-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]-amino]benzonitrile (intermediate 28) and 4-[4-chloro-6-[(2-chlorophenyl)methyl]-1,3,5-triazin-2-yl]-amino]benzonitrile (intermediate 29) were prepared.

b) 2,4-dichloro-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazine (intermediate 30) was prepared according to the procedure described in example A.4a but was stopped prior to the addition of 4-aminobenzonitrile.
B. Preparation of the final compounds

Example B.1

[0059]

a) Intermediate (1) (1.66 g) was added to a solution of 2,6-dichlorobenzene-ethanimidamide (1.29 g) in DMF (13 ml). The reaction mixture was stirred for three days at RT, then for two days at 60°C under argon flow. Water was added and the precipitate was filtered off. This fraction was refluxed in ACN (500 ml), cooled and the precipitate was filtered off and dried, yielding 1.58 g (67%, white solid) of 4-[[4-amino-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]amino]benzonitrile (compound 1).

b) Compound (1) (0.00135 mol) and acetic acid anhydride (20 ml) were combined and heated to reflux for 10 minutes. The reaction mixture was then removed from the oil bath and cooled to RT. The precipitate was filtered off, yielding 0.25 g (45%) of N-[[4-(cyanophenyl)amino]-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]acetamide (compound 22).

An increase of the time of reflux led to the disubstituted (compound 40) and the trisubstituted (compound 41) analogue of compound 22.

Example B.2

[0060] Methanol (120 ml) was added to a mixture of intermediate (5) (2.35 g) and K2CO3 (9.19 g) in water (40 ml). The resulting reaction mixture was stirred and refluxed for 19 hours under argon. Water (120 ml) was added, the precipitate was filtered off and purified by column chromatography over silica gel (eluent : DCM / 2-propanone 90/10). Two desired fractions were collected and their solvent was evaporated. The first fraction group was slurried in ACN, cooled, filtered off and dried, yielding 0.75 g (45%, white solid) of 4-[[4-amino-6-[(5-chloro-1H-indol-4-yl)methyl]-1,3,5-triazin-2-yl]amino]benzonitrile (compound 8, mp. 267 - 268°C). The second column fraction group yielded 0.15 g of 4-[[4-amino-6-[(5-chloro-1H-indol-4-yl)methyl]-1,3,5-triazin-2-yl]amino]benzamide (compound 9). After 24 hours at RT the aqueous filtrate was filtered to give 0.25 g of compound (9). The two fractions of compound 9 were combined, dissolved in 500 ml of refluxing methanol, hot filtered, the filtrate concentrated to 50 ml, cooled and filtered, then dried, yielding 0.25 g (14%) of 4-[[4-amino-6-[(5-chloro-1H-indol-4-yl)methyl]-1,3,5-triazin-2-yl]amino]benzamide (compound 9, mp. 204 - 205°C).

Example B.3

[0061] A mixture of compound (1) (1.0 g) and sodium hydride (0.11 g), in DMF (20 ml) was stirred for 20 minutes at RT under argon flow. Then, 2-isocyanato-propane (0.27 ml) was added dropwise over 30 minutes and the reaction mixture was allowed to stir at RT overnight. The solvent was evaporated and water added. The residue was filtered, washed with water and diethyl ether, and recrystallized from 1,4-dioxane. The precipitate was filtered off and dried, yielding 0.95 g (85.1 %) of N-[[4-(cyano-phenyl)amino]-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]-N’-(1-methyl-ethyl)-urea (compound 6, mp. 267 - 268°C).

Example B.4

[0062] A mixture of N-[amino(methylamino)methyl]-2,6-dichlorobenzeneacetamide (4.15 g) and intermediate 6 (3.05 g) in DMF (25 ml) was stirred and refluxed for 20 hours. The solvent was evaporated, the residue dissolved in DMF (25 ml) and heated at 80°C for 16 hours and at 100-108°C for another 66 hours. The reaction mixture was cooled, quenched with water, extracted with diethyl ether, and washed with dilute NaOH, water, brine, and dried over K2CO3. The solvent was evaporated, and the residue was purified by flash column chromatography, and recrystallized from 2-propanol, and finally from methanol, yielding 0.78 g (12.6%) of 4-[[4-[(2,6-dichlorophenyl)methyl]-6-(methyl-amino)-1,3,5-triazin-2-yl]amino]benzonitrile (compound 7, mp. 229 - 230°C).

Example B.5

[0063] a) Intermediate (27) (0.00423 mol), 2-amino-acetamide (0.00431 mol), 1,4-dioxane (20 ml) and N,N-diisopropyl-ethylamine (0.00862 mol) were combined and stirred at RT for 16 hours under argon. The reaction mixture was quenched with H2O and filtered. The residue was washed with H2O, filtered and recrystallized from ACN (200 ml).
Example B.6

[0064]

a) Intermediate (27) (0.0128 mol), 1,4-dioxane (50 ml), and O-(trimethylsilyl)hydroxyl-amine, (0.134 mol) were combined under argon. The reaction mixture was stirred at RT for 20 hours. The reaction mixture was concentrated and DCM (50 ml), NaOH (1 N; 50 ml), and HCl (1N; 100 ml) were added. The solution was stirred for one hour. The precipitate was filtered off and recrystallized from methanol. The precipitate was filtered off and dried, yielding 2.96 g (59.8%) of 4-[4-[(2,6-dichlorophenyl)methyl]-6-(hydroxyamino)-1,3,5-triazin-2-yl]amino]benzonitrile mono-hydrochloride monohydrate (compound 21).

b) Compound (21) (0.00227 mol) was stirred in ethylacetate (50 ml). The mixture was washed with NaHCO₃ (50 ml saturated solution), then washed with brine, dried, filtered and the solvent was evaporated. The residue was crystallized from methanol, filtered off and dried, yielding 0.60 g (70.6%) of 4-[4-[(2,6-dichlorophenyl)methyl]-6-(hydroxyamino)-1,3,5-triazin-2-yl]amino]benzonitrile (compound 33).

Example B.7

[0065] A mixture of intermediate (30) (0.068 mol) and 4-amino-benzonitrile (0.0420 mol) in 1,4-dioxane (100 ml) was stirred and refluxed for 16 hours under argon. The hot reaction mixture was filtered, and the resulting filtrate was concentrated. The residue was dissolved in DCM (30 ml). The precipitate was filtered off and recrystallized from methanol. The precipitate was filtered off and dried, yielding 1.00 g (5.0%) of N,N'-[6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2,4-diyl] bis[4-aminobenzonitrile] (compound 11).

Example B.8

[0066]

a) DMF (9.0 ml) and intermediate (31) (0.00295 mol) were added to sodium hydride (0.00354 mol) under argon. The reaction mixture was stirred for 10 minutes before adding 4-fluorobenzonitrile (0.00301 mol) and was heated at 80 °C for 3.5 hours. After cooling to RT, the reaction mixture was quenched with H₂O. The precipitate was filtered off, dried and purified by flash column chromatography over silica gel (eluent: DCM). The desired fractions were collected and the solvent was evaporated, yielding 4-[4-[(2,6-dichlorophenyl)methyl]-6-(dimethylamino)-1,3,5-triazin-2-yl]amino]benzonitrile (compound 10).

b) Intermediate (31) (0.00671 mol), dimethylacetamide (20 ml), 4-fluorobenzonitrile (0.01007 mol), and K₂CO₃ (0.02685 mol) were combined and refluxed for 4 hours under argon. The reaction mixture was stirred and refluxed overnight and was quenched with water and extracted with DCM. The separated organic layer was washed with brine, dried, filtered, and the solvent was evaporated. The residue was purified by flash column chromatography (eluent: DCM). The desired fractions were collected and the solvent was evaporated. The residue was recrystallized from CH₂OH, recrystallized from ACN and finally treated with CH₂OH. The precipitate was filtered off and dried, yielding 0.32 g of 4,4'-[4-[(2,6-dichlorophenyl)methyl]-6-(dimethylamino)-1,3,5-triazin-2-yl]amino]bisbenzonitrile (compound 38).

Example B.9

[0067] A solution of sodium hydride (0.00195 mol) in DMF (7 ml) was added to compound (1) (0.00186 mol) and the resulting solution was stirred for 5 minutes under argon. Then, chloroacetic acid methyl ester (0.0186 mol) and the reaction mixture was heated to 70 °C for 19 hours. The reaction mixture was then quenched with water and the resulting solid was filtered off. The residue was treated with hot ACN, then filtered while still hot. The residue from the cooled filtrate was recrystallized from 1,4-dioxane. The precipitate was filtered off, yielding 0.16 g (19.4%) of methyl N-(4-cyanophenyl)-N-[4-amino-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]glycine (compound 39).
Example B.10

Sodium hydride (0.00150 mol), ACN (5 ml), compound (1) (0.00135 mol) in 1,4-dioxane (10 ml), and ACN (10 ml) were combined under argon. The solution was stirred for 1 hour. 1-chloro-3-isocyanato-propane (0.00137 mol) was added. The reaction mixture was stirred for 1 hour. 1-methyl-pyrrolidinone (10 ml) was added. The reaction mixture was stirred for 16 hours. Then, the mixture was concentrated. The concentrate was partitioned between DCM/H2O. The resulting solution was filtered, dried over K2CO3, filtered, concentrated and the residue was treated with NH3 in 1,4-dioxane (12 ml, 0.5 M) and heated under pressure at 55 °C. The resulting solution was concentrated and further purified by flash column chromatography (elucent: DCM/CH3OH 95/5). The pure fractions were collected and the solvent was evaporated, yielding 0.12 g (18.9%) of N-[3-[(4-[(4-cyanophenyl)amino]-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]amino]propyl]urea (compound 23).

Example B.11

NaOH (0.0128 mol), 1,4-dioxane (5 ml), and guanidine (0.0128 mol) were combined and stirred at RT for 5 minutes under argon. Then, intermediate (27) (0.00128 mol) was added and the reaction mixture was stirred at RT for 16 hours. The reaction mixture was quenched with H2O, and stirred. The resulting precipitate was filtered off, and the residue was stirred in refluxing methanol, cooled, and filtered, yielding 0.34 g (64.3%) of N-[4-[(4-cyanophenyl)amino]-6-[[2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]-guanidine (compound 20).

Example B.12

A mixture of intermediate (27) (0.00256 mol) and 3-amino-1,2-propanediol (0.00563 mol) in 1,4-dioxane (10 ml) and 1-methyl-pyrrolidinone (2 ml) was stirred at RT for 48 hours under argon. The reaction mixture was concentrated, quenched with DCM/H2O and stirred. The precipitate was filtered off, yielding 1.12 g (86.9%) of (+)-4-[[4-[(2,6-dichlorophenyl)methyl]-6-[[2,3-dihydroxypropyl]amino]-1,3,5-triazin-2-yl]amino]benzonitrile (compound 26).

Example B.13

Compound (1) (0.0016 mol) and 1,1-dimethoxy-N,N-dimethylmethanamine (21 ml) were combined and stirred vigorously at ambient temperature for 8 hours. The reaction mixture was filtered and the collected solid was washed with ether (Fraction A). Additional compound was obtained by concentration of the filtrate (Fraction B). Fractions A and B were combined and recrystallized from ethanol, yielding 0.15 g (72.7%) of N-[4-[(4-cyanophenyl)-amino]-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]glycine (compound 16).

Example B.14

A solution of compound (13) (0.000519 mol), LiOH.H2O (0.000571 mol), methanol (5.0 ml) and H2O (5.0 ml) was stirred at RT for 16 hours under argon. The reaction mixture was concentrated, redissolved in H2O, acidified with 1.0 N HCl (0.52 ml), and stirred for 3 days. Then, the solution was filtered, an excess of 1 N HCl and CH3OH was added to the filtrate, and the solution was stirred for 16 hours. The resulting precipitate was filtered off and dried, yielding 0.18 g (72.7%) of N-[4-[(4-cyanophenyl)-amino]-6-[[2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]glycine (compound 16).

Example B.15

A mixture of compound (32) (0.00378 mol) in NH3 in dioxane (50 ml) was heated in a pressure vessel at 85 °C for 9 days. The solvent was evaporated and the resulting residue was partitioned between DCM/H2O. The organic layer was filtered, washed with ethanol and concentrated to ±25 ml and filtered, yielding 0.54g (30.3%) of (±)-2-[(4-azido-6-[(4-cyanophenyl)amino]-6-[[2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]amino]4-hydroxybutanamide (compound 34).

Example B.16

A solution of intermediate (27) in dimethylsulfoxide was treated with NaN3 in one portion and was stirred at RT for 28 hours. The reaction mixture was poured into ice and then filtered. The precipitate was washed with cold water and was recrystallized from ACN, yielding 0.46 g of 4-[[4-azido-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]
Tables 2 to 5 list the compounds that were prepared according to one of the above Examples.

C. Pharmacological example

Example C.1

[0076] A rapid, sensitive and automated assay procedure was used for the *in vitro* evaluation of anti-HIV agents. An HIV-1 transformed T4-cell line, MT-4, which was previously shown (Koyanagi et al., *Int. J. Cancer*, 36, 445-451, 1985) to be highly susceptible to and permissive for HIV infection, served as the target cell line. Inhibition of the HIV-induced cytopathic effect was used as the end point. The viability of both HIV- and mock-infected cells was assessed spectrophotometrically via the *in situ* reduction of 3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide (MTT). The 50% cytotoxic concentration (CC<sub>50</sub> in µM) was defined as the concentration of compound that reduced the absorbance of the mock-infected control sample by 50%. The percent protection achieved by the compound in HIV-infected cells was calculated by the following formula:

\[
\frac{(OD_{T})_{HIV} - (OD_{C})_{HIV}}{(OD_{C})_{MOCK} - (OD_{C})_{HIV}} \text{ expressed in } \%
\]

whereby \( (OD_{T})_{HIV} \) is the optical density measured with a given concentration of the test compound in HIV-infected cells; \( (OD_{C})_{HIV} \) is the optical density measured for the control untreated HIV-infected cells; \( (OD_{C})_{MOCK} \) is the optical density measured for the control untreated mock-infected cells; all optical density values were determined at 540 nm. The dose achieving 50% protection according to the above formula was defined as the 50% inhibitory concentration (IC<sub>50</sub> in µM). The ratio of CC<sub>50</sub> to IC<sub>50</sub> was defined as the selectivity index (SI). The compounds of formula (I) were shown to inhibit HIV-1 effectively. Particular IC<sub>50</sub>, CC<sub>50</sub> and SI values are listed in Table 6 hereinbelow; the numbers between brackets in the columns "IC<sub>50</sub> (µM)" and "CC<sub>50</sub> (µM)" list the number of experiments used to calculate the mean IC<sub>50</sub> and CC<sub>50</sub> values.
D. Composition examples

[0077] The following formulations exemplify typical pharmaceutical compositions suitable for systemic or topical administration to animal and human subjects in accordance with the present invention.

"Active ingredient" (A.I.) as used throughout these examples relates to a compound of formula (I) or a pharmaceutically
acceptable addition salt thereof.

Example D.1: film-coated tablets

Preparation of tablet core

[0078] A mixture of 100 g of the A.I., 570 g lactose and 200 g starch was mixed well and thereafter humidified with a solution of 5 g sodium dodecyl sulfate and 10 g polyvinylpyrrolidone in about 200 ml of water. The wet powder mixture was sieved, dried and sieved again. Then there was added 100 g microcrystalline cellulose and 15 g hydrogenated vegetable oil. The whole was mixed well and compressed into tablets, giving 10,000 tablets, each comprising 10 mg of the active ingredient.

Coating

[0079] To a solution of 10 g methyl cellulose in 75 ml of denaturated ethanol there was added a solution of 5 g of ethyl cellulose in 150 ml of dichloromethane. Then there were added 75 ml of dichloromethane and 2.5 ml 1,2,3-propanetriol. 10 g of polyethylene glycol was molten and dissolved in 75 ml of dichloromethane. The latter solution was added to the former and then there were added 2.5 g of magnesium octadecanoate, 5 g of polyvinylpyrrolidone and 30 ml of concentrated color suspension and the whole was homogenated. The tablet cores were coated with the thus obtained mixture in a coating apparatus.

Claims

1. A compound of formula

![Chemical Structure](image)

a pharmaceutically acceptable acid addition salt or a stereochemically isomeric form thereof, wherein

R¹ and R² are each independently selected from hydrogen; hydroxy; amino; C₁₋₆ alkyl; C₁₋₆ alkoxy; C₁₋₆ alkylcarbonyl; C₁₋₆ alkoxy carbonyl; Ar¹; mono- or di(C₁₋₆ alkyl)amino; mono- or di(C₁₋₆ alkyl)aminocarbonyl; dihydro-2(3H)-furanone; C₁₋₆ alkyl substituted with one or two substituents each independently selected from amino, imino, aminocarbonyl, aminocarbonylamino, hydroxy, hydroxyC₁₋₆ alkoxy, carboxyl, mono- or di(C₁₋₆ alkyl)amino, C₁₋₆ alkoxy carbonyl and thienyl; or

R¹ and R² taken together may form pyrrolidinyl, piperidinyl, morpholinyl, azido or mono- or di(C₁₋₆ alkyl) aminoC₁₋₄ alkyldiene;

R³ is hydrogen, Ar¹, C₁₋₆ alkyl carbonyl, C₁₋₆ alkyl, C₁₋₆ alkoxy carbonyl, C₁₋₆ alkyl substituted with C₁₋₆ alkoxy carbonyl; and

R⁴, R⁵, R⁶ and R⁷ are each independently selected from hydrogen, hydroxy, halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl or trihalomethoxy ;

R⁶ is cyano or aminocarbonyl;

L is C₁₋₁₀ alkyl; C₅₋₁₀ alkenyl; C₃₋₁₀ alkynyl; C₃₋₇ cycloalkyl; or

L is C₁₋₁₀ alkyl substituted with one or two substituents independently selected from

a) C₃₋₇ cycloalkyl;

b) indolyl or indolyl substituted with one, two, three or four substituents each independently selected from halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethoxy, C₁₋₆ alkyl carbonyl;

c) phenyl or phenyl substituted with one, two, three, four or five substituents each inde-
pendently selected from halo, hydroxy, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C₁₋₆ alkylcarbonyl; and,

\[ \text{Ar}^1 \]
is phenyl, or phenyl substituted with one, two or three substituents each independently selected from halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, nitro or trifluoromethyl.

2. A compound according to claim 1 wherein R¹ and R² are each independently selected from hydrogen, C₁₋₆ alkyl, Ar¹ or mono- or di(C₁₋₆ alkyl)aminocarbonyl; or R¹ and R² taken together may form pyrrolidinyl, piperidinyl or morpholinyl; R³ is hydrogen, C₁₋₆ alkyl or Ar¹; and Ar¹ is phenyl, or phenyl substituted with one, two or three substituents each independently selected from halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, nitro or trifluoromethyl; and

L is a radical of formula

\[
\text{Alk}\]
wherein Alk is C₁₋₆ alkanediyl;
Rₐ, Rₐ, R₃, R₆, R₆, R₇ and R₆ are each independently selected from hydrogen, halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl or trihalomethyloxy; or Rₐ and Rₐ taken together may form a bivalent radical of formula

\[
-\text{CH=CH-NR}^9-\quad (a-1),
\]

\[
-\text{NR}^9-\text{CH=CH-}\quad (a-2),
\]

wherein R⁹ is hydrogen or C₁₋₆ alkyl.

3. A compound according to claim 1 or 2 wherein L is C₃₋₁₀ alkenyl or C₁₋₂ alkyl substituted with one or two substituents independently selected from

a) C₃₋₇ cycloalkyl;  
b) indolyl or indolyl substituted with one, two, three or four substituents each independently selected from halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C₁₋₆ alkylcarbonyl;  
c) phenyl or phenyl substituted with one, two, three, four or five substituents each independently selected from halo, hydroxy, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C₁₋₆ alkylcarbonyl.

4. A compound according to any one of claims 1 to 3 wherein L is 2,6-dichlorophenylmethyl.

5. A compound according to any one of claims 1 to 4 wherein NR¹R² is other than amino.

6. A compound according to claim 1 wherein the compound is 4-[[4-amino-6-[(2,6-dichlorophenyl)methyl]-1,3,5-triazin-2-yl]amino]benzonitrile; 4-[[4-[[2,6-dichlorophenyl]methyl]-6-(hydroxyamino)-1,3,5-triazin-2-yl]amino]benzonitrile or a pharmaceutically acceptable acid addition salt thereof.

7. A compound according to any one of claims 1 to 6 for use as a medicine.

8. The use of a compound of formula (I)
wherein

- $R^1$ and $R^2$ are each independently selected from hydrogen; hydroxy; amino; $C_1$-$C_6$ alkyl; $C_1$-$C_6$ alkoxy; $C_1$-$C_6$ alkylcarbonyl; $C_1$-$C_6$ alkoxy carbonyl; $Ar^1$; mono- or di($C_1$-$C_6$ alkyl)amino; mono- or di($C_1$-$C_6$ alkyl)aminocarbonyl; dihydro-2(3H)furanone; $C_1$-$C_6$ alkyl substituted with one or two substituents each independently selected from amino, imino, aminocarbonyl, aminocar- bonylamino, hydroxy, hydroxy$C_1$-$C_6$ alkoxy, carboxyl, mono- or di($C_1$-$C_6$ alkyl)amino, $C_1$-$C_6$ alkoxy carbonyl and thieryl; or
- $R^1$ and $R^2$ taken together may form pyrrolidinyl, piperidinyl, morpholinyl, azido or mono- or di($C_1$-$C_6$ alkyl)amino$C_1$-$C_4$ alkylidene;
- $R^3$ is hydrogen, $Ar^1$, $C_1$-$C_6$ alkyl carbonyl, $C_1$-$C_6$ alkyl, $C_1$-$C_6$ alkoxy carbonyl, $C_1$-$C_6$ alkyl substituted with $C_1$-$C_6$ alkoxy carbonyl; and
- $R^4$, $R^5$, $R^6$, $R^7$ and $R^8$ are each independently selected from hydrogen, hydroxy, halo, $C_1$-$C_6$ alkyl, $C_1$-$C_6$ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl or trihalomethyloxy;
- $L$ is $C_1$-$C_{10}$ alkenyl; $C_3$-$C_{10}$ alkyl; $C_3$-$C_{10}$ alkynyl; $C_3$-$C_7$ cycloalkyl; or
- $L$ is $C_1$-$C_{10}$ alkyl substituted with one or two substituents independently selected from
  - a) $C_3$-$C_7$ cycloalkyl;
  - b) indolyl or indolyl substituted with one, two, three or four substituents each independ-ently selected from halo, $C_1$-$C_6$ alkyl, $C_1$-$C_6$ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, $C_1$-$C_6$ alkyl carbonyl;
  - c) phenyl or phenyl substituted with one, two, three, four or five substituents each independently selected from halo, hydroxy, $C_1$-$C_6$ alkyl, $C_1$-$C_6$ alkoxy, cyano, aminocar-bonyl, nitro, amino, trihalomethyl, trihalomethyloxy, $C_1$-$C_6$ alkyl carbonyl; and,
- $Ar^1$ is phenyl, or phenyl substituted with one, two or three substituents each independently selected from halo, $C_1$-$C_6$ alkyl, $C_1$-$C_6$ alkoxy, cyano, nitro or trifluoromethyl; for the manufacture of a medicine for the treatment of subjects suffering from HIV (Human Immuno-deficiency Virus) infection.

9. A compound of formula

wherein $W^5$ is halo and $L$, $R^3$, $R^4$, $R^5$, $R^6$, $R^7$ and $R^8$ are defined as in claim 1.

10. A pharmaceutical composition comprising a pharmaceutically acceptable carrier and a therapeutically active amount of a compound as claimed in any one of claims 1 to 6.

11. A process for preparing a pharmaceutical composition as claimed in claim 10 characterized in that a therapeu-
A process for preparing a compound as claimed in claim 1, characterized by:

a) reacting an intermediate of formula (II) with an intermediate of formula (III)

wherein R³ to R⁶ and L are as defined in claim 1, in a reaction-inert solvent thus forming a compound of formula (I-α);

b) reacting an intermediate of formula (IV) with an intermediate of formula (V)

wherein R¹, R², R⁴ to R⁸ and L are as defined in claim 1, in a reaction-inert solvent thus forming a compound of formula (I-β);

c) deprotecting an intermediate of formula (VI)

wherein n is 1 to 4 and each R' is independently selected from halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, cyano, aminocarbonyl, nitro, amino, trihalomethyl, trihalomethyloxy, C₁₋₆ alkylcarbonyl, according to art-known deprotection techniques thus forming a compound of formula (I-γ);

d) reacting an intermediate of formula (VII) with an amino derivative of formula (VIII)
wherein \( W^1 \) is a suitable leaving group and \( R^2 \) to \( R^8 \) are defined as in claim 1, in a reaction inert solvent and in the presence of a suitable base, and in case \( R^2 \) contains a protected hydroxy moiety, by subsequently removing the protective group according to art-known methodologies, thus forming a compound of formula (I-d);

e) reacting an intermediate of formula (IX) with an intermediate of formula (X)

wherein \( W^2 \) is a suitable leaving group and \( Ar^1 \) and \( L \) are as defined in claim 1, in a reaction inert solvent thus forming a compound of formula (I-e);

f) reacting an intermediate of formula (XI) with an intermediate of formula (XII)

wherein \( W^3 \) is a suitable leaving group, \( R^4 \) to \( R^7 \) are as defined in claim 1 and \( R^1' \) and \( R^2' \) are the same as \( R^1 \) and \( R^2 \) as defined in claim 1 but are other than hydrogen, in a reaction-inert solvent and in the presence of a suitable base; thus forming a compound of formula (I-f-1);

g) reacting an intermediate of formula (XI-b) with an intermediate of formula (XII-b)
wherein $W^3$ is a suitable leaving group, $Ar^1$ is as defined in claim 1 and $R^1'$ and $R^2'$ are the same as $R^1$ and $R^2$ as defined in claim 1 but are other than hydrogen, in a reaction-inert solvent and in the presence of a suitable base; thus forming a compound of formula (I-f-2);

or, if desired, converting compounds of formula (I) into each other following art-known transformation reactions; and further, if desired, converting the compounds of formula (I) into an acid addition salt by treatment with an acid, or conversely, converting the acid addition salt form into the free base by treatment with alkali; and, if desired, preparing stereochemically isomeric forms thereof.

13. The combination of a compound of formula (I) as defined in claim 8 and another antiretroviral compound.

14. A combination as claimed in claim 13 for use as a medicine.

15. A product containing (a) a compound of formula (I) as defined in claim 8, and (b) another antiretroviral compound, as a combined preparation for simultaneous, separate or sequential use in anti-HIV treatment.

16. A pharmaceutical composition comprising a pharmaceutically acceptable carrier and as active ingredients (a) a compound of formula (I) as defined in claim 8, and (b) another antiretroviral compound.

Patentansprüche

1. Verbindungen der Formel

\[
\begin{align*}
R^1 & \text{ und } R^2 \text{ jeweils unabhängig voneinander aus Wasserstoff; Hydroxy; Amino; } C_{1-6}\text{-Alkyl; } C_{1-6}\text{-Alk oxy; } C_{1-6}\text{-Alky carbonyl; } C_{1-6}\text{-Alkylcarbonyl; } Ar^1; \text{ Mono- oder Di}(C_{1-6}\text{-alkyl})\text{amino; Mono- oder Di}(C_{1-6}\text{-alkyl})\text{aminocarbonyl; Dihydro-2(3}\text{-H})\text{-furanon; durch einen oder zwei Substituenten unabhängig voneinander ausgewählt aus Amino, Imino, Aminocarbonyl, Aminocarbonyl- amino, Hydroxy, Hydroxy-C}_{1-6}\text{-alkyloxy, Carboxyl, Mono- oder Di}(C_{1-6}\text{-alkyl})\text{amino, } C_{1-6}\text{-Al kyloxycarbonyl und Thienyl substituiertes } C_{1-6}\text{-Alkyl ausgewählt sind; oder}
\end{align*}
\]

R$^1$ und $R^2$ zusammen Pyrrolidinyl, Piperidinyl, Morpholinyl, Azido oder Mono- oder Di(C$_{1-6}$-alkyl)amino-C$_{1-4}$-alkylen bilden können;

R$^3$ Wasserstoff, Ar$^1$, C$_{1-6}$-Alkylcarbonyl, C$_{1-6}$-Alkyl, C$_{1-6}$-Alkylcarbonyl, durch C$_{1-6}$-Alkylxycarbonyl substituiertes C$_{1-6}$-Alkyl steht; und
R⁴, R⁵, R⁷ und R⁸ jeweils unabhängig voneinander aus Wasserstoff, Hydroxy, Halogen, C₁₋₆-Alkyl, C₁₋₆-Alkyl- 
loxy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl oder Trihalogenmethyloxy aus- 
gewählt sind; für Cyano oder Aminocarbonyl steht; 

L für C₁₋₆-Alkyl; C₃₋₁₀-Alkenyl; C₃₋₁₀-Alkinyl; C₃₋₇-Cycloalkyl steht; oder 

L für C₁₋₁₀-Alkyl steht, das durch einen oder zwei Substituenten unabhängig voneinander aus- 
gewählt aus 

a) C₃₋₇-Cycloalkyl; 

b) Indolyl oder durch einen, zwei, drei oder vier Substituenten, jeweils unabhängig von- 
einander ausgewählt aus Halogen, C₁₋₆-Alkyl, C₁₋₆-Alkyl-oxo, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyloxy, C₁₋₆-Alkyl- 
carbonyl, substituiertes Indolyl; 

c) Phenyl oder durch einen, zwei, drei, vier oder fünf Substituenten, jeweils unabhängig 

evoneinander ausgewählt aus Halogen, Hydroxy, C₁₋₆-Alkyl, C₁₋₆-Alkyl-oxo, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyloxy, C₁₋₆-Alkyl- 
carbonyl, substituiertes Phenyl; substituierter ist und 

Ar¹ für Phenyl oder durch einen, zwei oder drei Substituenten, jeweils unabhängig 
evoneinander ausgewählt aus Halogen, C₁₋₆-Alkyl, C₁₋₆-Alkyl-oxo, Cyano, Nitro oder Trifu 

lormethylen, substituiertes Phenyl steht. 

2. Verbindungen nach Anspruch 1, wobei R¹ und R² jeweils unabhängig voneinander aus Wasserstoff, C₁₋₆-Alkyl, 

Ar¹ oder Mono- oder Di(C₁₋₆-alkyl)aminocarbonyl ausgewählt sind; oder R¹ und R² zusammen Pyrrolidinyl, Piper- 
ridinyl oder Morpholinyl bilden können; R³ für Wasserstoff, C₁₋₆-Alkyl oder Ar¹ steht; und Ar¹ für Phenyl oder durch 
einen, zwei oder drei Substituenten, jeweils unabhängig voneinander ausgewählt aus Halogen, C₁₋₆-Alkyl, C₁₋₆- 
Alkyl-oxo, Cyano, Nitro oder Trifluormethyl, substituiertes Phenyl steht; und 

L für einen Rest der Formel 

Ar¹ für Phenyl oder durch einen, zwei oder drei Substituenten, jeweils unabhängig voneinander ausgewählt 
aus Halogen, C₁₋₆-Alkyl, C₁₋₆-Alkyl-oxo, Cyano, Nitro oder Trifluormethyl, substituiertes Phenyl steht; 

R⁴, R⁵, R⁷ und R⁸ stehen, wobei Alk für C₁₋₆-Alkandiyl steht; 

jeweils unabhängig voneinander ausgewählt sind aus Wasserstoff, Hal- 
logen, C₁₋₆-Alkyl, C₁₋₆-Alkyl-oxo, Cyano, Aminocarbonyl, Nitro, Amino, 
Trihalogenmethyl oder Trihalogenmethyloxy; oder 

R⁴ und R⁵ zusammen einen zweiwertigen Rest der Formel 

-CH=CH-NR⁹ - (a-1), 

-NR⁹=CH=CH- (a-2), 

wobei R⁹ für Wasserstoff oder C₁₋₄-Alkyl steht,
3. Verbindungen nach Anspruch 1 oder 2, wobei \( \text{L} \) für C\(_{3-10}\)-Alkenyl oder C\(_{1-2}\)-Alkyl, das durch einen oder zwei Substituenten unabhängig voneinander ausgewählt aus

a) C\(_{3-7}\)-Cycloalkyl;

b) Indolyl oder durch einen, zwei, drei oder vier Substituenten, jeweils unabhängig voneinander ausgewählt aus Halogen, C\(_{1-6}\)-Alkyl, C\(_{1-6}\)-Alkoxy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl, Trihalogenmethylxoy, C\(_{1-6}\)-Alkylicarbonyl, substituiertes Indolyl;

c) Phenyl oder durch einen, zwei, drei, vier oder fünf Substituenten, jeweils unabhängig voneinander ausgewählt aus Halogen, Hydroxy, C\(_{1-6}\)-Alkyl, C\(_{1-6}\)-Alkoxy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl, Trihalogenmethyloxoy, C\(_{1-6}\)-Alkylicarbonyl, substituiertes Phenyl, substituiert ist.

4. Verbindungen nach einem der Ansprüche 1 bis 3, wobei \( \text{L} \) für 2,6-Dichlorphenylmethyl steht.

5. Verbindungen nach einem der Ansprüche 1 bis 4, wobei NR\(^1\)R\(^2\) nicht für Amino steht.

7. Verbindungen nach einem der Ansprüche 1 bis 6 zur Verwendung als Arzneimittel.

8. Verwendung einer Verbindung der Formel (I)

![Image](https://example.com/image.png)

wobei \( \text{R}^1 \) und \( \text{R}^2 \) jeweils unabhängig voneinander aus Wasserstoff, Hydroxy, Amino, C\(_{1-6}\)-Alkyl, C\(_{1-6}\)-Alkoxy, C\(_{1-6}\)-Alkylicarbonyl, C\(_{1-6}\)-Alkoxyycarbonyl; \( \text{Ar}^1 \); Mono- oder Di(C\(_{1-6}\)-alkyl)amino; Mono- oder Di(C\(_{1-6}\)-alkyl)amino-carbonyl; Dihydro-2(3\(^H\))-furanon; durch einen oder zwei Substituenten unabhängig voneinander ausgewählt aus Amino, Imino, Aminocarbonyl, Aminocarbonylamino, Hydroxy, Hydroxy-C\(_{1-6}\)-alkoxy, Carboxyl, Mono- oder Di (C\(_{1-6}\)-alkyl)amino, C\(_{1-6}\)-Alkoxyycarbonyl und Thietyl substituiertes C\(_{1-6}\)-Alkyl ausgewählt sind; oder

\( \text{R}^3 \) Wasserstoff, \( \text{Ar}^1 \), C\(_{1-6}\)-Alkylcarbonyl, C\(_{1-6}\)-Alkyl, C\(_{1-6}\)-Alkoxyycarbonyl, durch C\(_{1-6}\)-Alkoxyycarbonyl substituiertes C\(_{1-6}\)-Alkyl steht; und

\( \text{R}^4, \text{R}^5, \text{R}^6, \text{R}^7 \) und \( \text{R}^8 \) jeweils unabhängig voneinander aus Wasserstoff, Hydroxy, Halogen, C\(_{1-6}\)-Alkyl, C\(_{1-6}\)-Alkoxy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl oder Trihalogenmethyloxoy ausgewählt sind;

\( \text{L} \) für C\(_{1-10}\)-Alkyl; C\(_{3-10}\)-Alkenyl; C\(_{3-7}\)-Cycloalkyl steht; oder

\( \text{L} \) für C\(_{1-10}\)-Alkyl steht, das durch einen oder zwei Substituenten unabhängig voneinander ausgewählt aus
a) C₃₋₇-Cycloalkyl;

b) Indolyl oder durch einen, zwei, drei oder vier Substituenten, jeweils unabhängig voneinander ausgewählt aus Halogen, C₁₋₆-Alkyl, C₁₋₆-Alkylroy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl, Trihalogenmethylroy, C₁₋₆-Alkylcarbonyl, substituiertes Indolyl;

c) Phenyl oder durch einen, zwei, drei, vier oder fünf Substituenten, jeweils unabhängig voneinander ausgewählt aus Halogen, Hydroxy, C₁₋₆-Alkyl, C₁₋₆-Alkylroy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl, Trihalogenmethylroy, C₁₋₆-Alkylcarbonyl, substituiertes Phenyl; substituiert ist und

Ar¹ für Phenyl oder durch einen, zwei oder drei Substituenten, jeweils unabhängig voneinander ausgewählt aus Halogen, C₁₋₆-Alkyl, C₁₋₆-Alkylroy, Cyano, Nitro oder Trifluormethyl, substituiertes Phenyl steht; zur Herstellung eines Arzneimittels zur Behandlung von Patienten, die an einer HIV-(Human Immunodeficiency Virus-)Infektion leiden.

9. Verbindungen der Formel

wobei W⁵ für Halogen steht und L, R³, R⁴, R⁵, R⁶, R⁷ und R⁸ wie in Anspruch 1 definiert sind.

11. Verfahren zur Herstellung einer pharmazeutischen Zusammensetzung nach Anspruch 10, dadurch gekennzeichnet, daß man eine therapeutisch wirksame Menge einer Verbindung nach einem der Ansprüche 1 bis 6 innig mit einem pharmazeutisch unbedenklichen Träger mischt.

12. Verfahren zur Herstellung einer Verbindung nach Anspruch 1, dadurch gekennzeichnet, daß man

a) ein Zwischenprodukt der Formel (II) in einem reaktionsinerten Lösungsmittel mit einem Zwischenprodukt der Formel (III), wobei R³ bis R⁸ und L wie in Anspruch 1 definiert sind, unter Bildung einer Verbindung der Formel (I-a) umsetzt;

b) ein Zwischenprodukt der Formel (IV) in einem reaktionsinerten Lösungsmittel mit einem Zwischenprodukt der Formel (V), wobei R¹, R², R⁴ bis R⁸ und L wie in Anspruch 1 definiert sind, unter Bildung einer Verbindung
c) ein Zwischenprodukt der Formel (VI), wobei \( n \) für 1 bis 4 steht und die Reste \( R' \) jeweils unabhängig von einander aus Halogen, \( C_{1-6} \)-Alkyl, \( C_{1-6} \)-Alkyloxy, Cyano, Aminocarbonyl, Nitro, Amino, Trihalogenmethyl, Trihalogenmethyloxy, \( C_{1-6} \)-Alkylcarbonyl ausgewählt sind, nach im Stand der Technik bekannten Entschutzungsverfahren unter Bildung einer Verbindung der Formel (I-c) entschützt;

d) ein Zwischenprodukt der Formel (VII) in einem reaktionsinerten Lösungsmittel und in Gegenwart einer geeigneten Base mit einem Aminodervat der Formel (VIII), wobei \( W^1 \) für eine geeignete Abgangsgruppe steht und \( R^2 \) bis \( R^8 \) wie in Anspruch 1 definiert sind, umsetzt und, falls \( R^2 \) eine geschützte Hydroxylgruppe enthält, anschließend die Schutzgruppe nach im Stand der Technik bekannten Verfahren entfernt und so eine Verbindung der Formel (I-d) bildet;

e) ein Zwischenprodukt der Formel (IX) in einem reaktionsinerten Lösungsmittel unter Bildung einer Verbindung der Formel (I-e) mit einem Zwischenprodukt der Formel (X), wobei \( W^2 \) für eine geeignete Abgangsgruppe steht und \( A_r^1 \) und L wie in Anspruch 1 definiert sind, umsetzt;

f) ein Zwischenprodukt der Formel (XI) in einem reaktionsinerten Lösungsmittel und in Gegenwart einer geeigneten Base unter Bildung einer Verbindung der Formel (I-f-1) mit einem Zwischenprodukt der Formel (XII)
umsetzt, wobei $W^3$ für eine geeignete Abgangsgruppe steht, $R^4$ bis $R^7$ wie in Anspruch 1 definiert sind und $R^1'$ und $R^2'$ die gleichen Werte wie die in Anspruch 1 definierten Reste $R^1$ bzw. $R^2$ haben, jedoch nicht für Wasserstoff stehen;

\[ \text{Gleichung} \]

\[ (\text{XI-b}) \]

\[ (\text{XII-b}) \]

oder, falls gewünscht, Verbindungen der Formel (I') nach im Stand der Technik bekannten Transformationsreaktionen ineinander umwandelt und weiterhin, falls gewünscht, die Verbindungen der Formel (I) durch Behandlung mit einer Säure in ein Säureadditionssalz umwandelt oder umgekehrt die Säureadditionssalzformen durch Behandlung mit Alkali in die freie Base umwandelt und, falls gewünscht, stereochemisch isomere Formen davon herstellt.

13. Kombination einer wie in Anspruch 8 definierten Verbindung der Formel (I) und einer anderen antiretroviralen Verbindung.

15. Produkt, enthaltend (a) eine wie in Anspruch 8 definierte Verbindung der Formel (I) und (b) eine andere antiretrovirale Verbindung, als Kombinationspräparat zur gleichzeitigen, getrennten oder aufeinanderfolgenden Anwendung bei einer Anti-HIV-Behandlung.

16. Pharmazeutische Zusammensetzung, enthaltend einen pharmazeutisch unbedenklichen Träger und, als Wirkstoffe, (a) eine wie in Anspruch 8 definierte Verbindung der Formel (I) und (b) eine andere antiretrovirale Verbindung.

Rewendung

1. Composé de formule
un sel d'addition d'acide pharmaceutiquement acceptable ou une forme stéréochimiquement isomère de celui-ci, dans laquelle

\[ R^1 \text{ et } R^2 \text{ sont choisis chacun indépendamment parmi hydrogène ; hydroxy ; amine ; } C_{1-6}\text{alkyle ; } C_{1-6}\text{alkyloxy} ; C_{1-6}\text{alkylcarbonyle} ; C_{1-6}\text{alkyloxycarbonyle} ; Ar^1 \text{ ; mono- ou di}(C_{1-6}\text{alkyl})\text{amino ; mono- ou di}(C_{1-6}\text{alkyl})\text{aminocarbonyle ; dihydro-2(3H)-furanone ; } C_{1-6}\text{alkyle substitué par un ou deux substituants choisis chacun indépendamment parmi amino, imino, aminocarbonyle, aminocarbonylamino, hydroxy, hydroxyC}_{1-6}\text{alkyloxy, carboxy, mono- ou di}(C_{1-6}\text{alkyl})\text{amino, } C_{1-6}\text{alkyloxycarbonyle et thiényle ; ou}
\]

\[ R^1 \text{ et } R^2 \text{ pris ensemble peuvent former pyrrolidinyne, pipéridinyne, morpholininyne, azido ou mono- ou di}(C_{1-6}\text{alkyl})\text{aminoC}_{1-4}\text{alkylidène ;}
\]

\[ R^3 \text{ est hydrogène, } Ar^1,C_{1-6}\text{alkylcarbonyle, } C_{1-6}\text{alkyle, } C_{1-6}\text{alkyloxycarbonyle, } C_{1-6}\text{alkyle substitué par } C_{1-6}\text{alkyloxycarbonyle ; et}
\]

\[ R^4, R^5, R^7 \text{ et } R^8 \text{ sont choisis chacun indépendamment parmi hydrogène, hydroxy, halogéno, } C_{1-6}\text{alkyle, } C_{1-6}\text{alkyloxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle ou trihalogénométhyloxy ;}
\]

\[ R^6 \text{ est cyano ou aminocarbonyle ;}
\]

\[ L \text{ est } C_{1-10}\text{alkyle ; } C_{3-10}\text{alcényle ; } C_{3-10}\text{alcynyle ; } C_{3-7}\text{cycloalkyle ; ou}
\]

\[ L \text{ est } C_{1-10}\text{alkyle substitué par un ou deux substituants choisis indépendamment parmi}
\]

\[ a) C_{3-7}\text{cycloalkyle ;}
\]

\[ b) \text{indolyne ou indolyle substitué par un, deux, trois ou quatre substituants choisis chacun indépendamment parmi halogéno, } C_{1-6}\text{alkyle, } C_{1-6}\text{alkyloxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, } C_{1-6}\text{alkylcarbonyle ;}
\]

\[ c) \text{phényne ou phénylé substitué par un, deux, trois, quatre ou cinq substituants choisis chacun indépendamment parmi halogéno, hydroxy, } C_{1-6}\text{alkyle, } C_{1-6}\text{alkyloxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, } C_{1-6}\text{alkylcarbonyle ; et,}
\]

\[ Ar^1 \text{ est phényne, ou phénylé substitué par un, deux ou trois substituants choisis chacun indépendamment parmi halogéno, } C_{1-6}\text{alkyle, } C_{1-6}\text{alkyloxy, cyano, nitro ou trifluorométhyle.}
\]

2. Composé selon la revendication 1, caractérisé en ce que \( R^1 \text{ et } R^2 \) sont choisis chacun indépendamment parmi hydrogène, \( C_{1-6}\text{alkyle, } Ar^1 \text{ ou mono- ou di}(C_{1-6}\text{alkyl})\text{-aminocarbonyle ; ou}
\]

\[ R^1 \text{ et } R^2 \text{ pris ensemble peuvent former pyrrolidinyne, pipéridinyne ou morpholininyne ; } R^3 \text{ est hydrogène, } C_{1-6}\text{alkyle ou } Ar^1 ; \text{ et } Ar^1 \text{ est phényne ou phénylé substitué par un, deux ou trois substituants choisis chacun indépendamment parmi halogéno, } C_{1-6}\text{alkyle, } C_{1-6}\text{alkyloxy, cyano, nitro ou trifluorométhyle ; et}
\]

\[ L \text{ est un radical de formule}
\]

\[
\text{[Diagramme]}\]
dans laquelle Alk est C₁₋₆ alcanediyle ;
R⁰, R¹, R², R³, R⁴, R⁵, R⁶ et R⁷ sont choisis chacun indépendamment parmi hydrogène, halogéno, C₁₋₆ alkyyle,
C₁₋₆ alkoxy, cyano, aminocarboxyl, nitro, amino, trihalogénométhyle ou trihalogénométhyloxy ; ou
R⁰ et R¹ pris ensemble peuvent former un radical bivalent de formule

-CH=CH-NR⁹⁻

(a-1),

- NR⁹⁻CH=CH-

(a-2),
dans laquelle R⁹ est hydrogène ou C₁₋₄ alkyyle.

3. Composé selon la revendication 1 ou 2, **caractérisé en ce que** L est C₃₋₁₀ alcényle ou C₁₋₂ alkyyle substitué par un
ou deux substituants choisis indépendamment parmi
a) C₃₋₇ cycloalkyle ;
b) indolyke ou indolyke substitué par un, deux, trois ou quatre substituants choisis chacun indépendamment parmi halogéno, C₁₋₆ alkyyle, cyano, aminocarboxyl, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, C₁₋₆ alkylcarboxyl ;
c) phényle ou phényl substitué par un, deux, trois, quatre ou cinq substituants choisis chacun indépendamment parmi halogéno, hydroxy, C₁₋₆ alkyyle, C₁₋₆ alkoxy, cyano, aminocarboxyl, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, C₁₋₆ alkylcarboxyl.

4. Composé selon l'une quelconque des revendications 1 à 3, **caractérisé en ce que** L est 2,₆-dichlorophénylméthyle.

5. Composé selon l'une quelconque des revendications 1 à 4, **caractérisé en ce que** NR¹⁰R² est autre que amino.

6. Composé selon la revendication 1, **caractérisé en ce que** le composé est le 4-[(4-amino-6-[(2,₆-dichlorophényl)méthyl]-1,₃,₅-triazin-2-yl]amino]benzonitrile ;
le 4-[(4-[(2,₆-dichlorophényl)méthyl]-6-(hydroxyamino)-1,₃,₅-triazin-2-yl]amino]benzonitrile ou un sel d'addition d'acide pharmaceutiquement acceptable de celui-ci.

7. Composé selon l'une quelconque des revendications 1 à 6, destiné à être utilisé comme médicament.

8. Utilisation d'un composé de formule (I)

![Diagram](image)
substitué par $C_{1-6}$-alkyloxycarbonyle ; et
R$^4$, R$^5$, R$^6$, R$^7$ et R$^8$ sont choisis chacun indépendamment parmi hydrogène, hydroxy, halogéno, $C_{1-6}$-alkyle, $C_{1-6}$-alkoxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle ou trihalogénométhyloxy :

L est $C_{1-10}$-alkyle ; $C_{3-10}$-alcényle ; $C_{3-7}$-cycloalkyle ; ou
L est $C_{1-10}$-alkyle substitué par un ou deux substituants choisis indépendamment parmi

a) $C_{3-7}$-cycloalkyle ;
b) indolyle ou indolyle substitué par un, deux, trois ou quatre substituants choisis chacun indépendamment parmi halogéno, $C_{1-6}$-alkyle, $C_{1-6}$-alkoxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, $C_{1-6}$-alkylcarbonyle ;
c) phényle ou phényle substitué par un, deux, trois, quatre ou cinq substituants choisis chacun indépendamment parmi halogéno, hydroxy, $C_{1-6}$-alkyle, $C_{1-6}$-alkoxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, $C_{1-6}$-alkylcarbonyle ; et,

Ar$^1$ est phényle, ou phényle substitué par un, deux ou trois substituants choisis chacun indépendamment parmi halogéno, $C_{1-6}$-alkyle, $C_{1-6}$-alkoxy, cyano, nitro ou trifluorométhyle ;
pour la fabrication d'un médicament destiné au traitement de sujets atteints d'infection à VIH (Virus de l'Immunodéficience Humaine).

9. Composé de formule

\[ \text{VII} \]

dans laquelle W$^5$ est halogéno et L, R$^3$, R$^4$, R$^5$, R$^6$, R$^7$ et R$^8$ sont définis comme dans la revendication 1.

10. Composition pharmaceutique comprenant un support pharmaceutiquement acceptable et une quantité thérapeutiquement active d'un composé selon l'une quelconque des revendications 1 à 6.

11. Procédé de préparation d'une composition pharmaceutique selon la revendication 10, caractérisé en ce que une quantité thérapeutiquement efficace d'un composé selon l'une quelconque des revendications 1 à 6 est mélangée intimement avec un support pharmaceutiquement acceptable.

12. Procédé de préparation d'un composé selon la revendication 1, caractérisé par

a) la réaction d'un intermédiaire de formule (II) avec un intermédiaire de formule (III)
dans lesquelles R³ à R⁸ et L sont tels que définis dans la revendication 1, dans un solvant inerte vis-à-vis de la réaction, formant ainsi un composé de formule (I-a) ;
b) la réaction d'un intermédiaire de formule (IV) avec un intermédiaire de formule (V)
dans lesquelles R¹, R², R⁴ à R⁸ et L sont tels que définis dans la revendication 1, dans un solvant inerte vis-à-vis de la réaction, formant ainsi un composé de formule (I-b) ;
c) la déprotection d'un intermédiaire de formule (VI)
dans laquelle n est 1 à 4 et chaque R' est choisi indépendamment parmi halogéno, C₁-₆ alkyle, C₁-₆ alkyloxy, cyano, aminocarbonyle, nitro, amino, trihalogénométhyle, trihalogénométhyloxy, C₁-₆ alkylcarbonyle, selon des techniques de déprotection connues dans l'art, formant ainsi un composé de formule (I-c) ;
d) la réaction d'un intermédiaire de formule (VII) avec un dérivé amino de formule (VIII)
dans lesquelles $W^1$ est un groupement partant convenable et $R^2$ à $R^8$ sont définis comme dans la revendication 1, dans un solvant inerte vis-à-vis de la réaction et en présence d'une base convenable, et dans le cas où $R^2$ contient un motif hydroxy protégé, par l'élimination ultérieure du groupement protecteur selon les méthodologies connues dans l'art, formant ainsi un composé de formule (I-d) ;
e) la réaction d'un intermédiaire de formule (IX) avec un intermédiaire de formule (X)

dans lesquelles $W^2$ est un groupement partant convenable et $Ar^1$ et L sont tels que définis dans la revendication 1, dans un solvant inerte vis-à-vis de la réaction, formant ainsi un composé de formule (I-e) ;
f) la réaction d'un intermédiaire de formule (XI) avec un intermédiaire de formule (XII)

dans lesquelles $W^3$ est un groupement partant convenable, $R^4$ à $R^7$ sont tels que définis dans la revendication 1 et $R^1'$ et $R^2'$ sont identiques à $R^1$ et $R^2$ comme définis dans la revendication 1 mais sont différents d'hydrogène, dans un solvant inerte vis-à-vis de la réaction et en présence d'une base convenable, formant ainsi un composé de formule (I-f-1) ;
g) la réaction d'un intermédiaire de formule (XI-b) avec un intermédiaire de formule (XII-b)
dans lesquelles \( W^3 \) est un groupement partant convenable, \( Ar^1 \) est tel que défini dans la revendication 1 et \( R^1' \) et \( R^2' \) sont identiques à \( R^1 \) et \( R^2 \) comme définis dans la revendication 1 mais sont différents d'hydrogène, dans un solvant inerte vis-à-vis de la réaction et en présence d'une base convenable, formant ainsi un composé de formule (I-f-2) ;

ou, si on le souhaite, la transformation des composés de formule (I') les uns en les autres en suivant des réactions de transformation connues dans l'art ; et de plus, si on le souhaite, la transformation des composés de formule (I) en un sel d'addition d'acide par traitement avec un acide, ou inversement la transformation de la forme de sel d'addition d'acide en la base libre par traitement avec un alcali ; et, si on le souhaite, la préparation des formes stéréochimiquement isomères de ceux-ci.

13. Association d'un composé de formule (I) telle que définie dans la revendication 8 et d'un autre composé antirétroviral.

15. Produit contenant (a) un composé de formule (I) telle que définie dans la revendication 8, et (b) un autre composé antirétroviral, sous forme de préparation combinée destinée à une utilisation simultanée, séparée ou séquentielle dans un traitement anti-VIH.

16. Composition pharmaceutique comprenant un support pharmaceutiquement acceptable et comme principes actifs (a) un composé de formule (I) telle que définie dans la revendication 8, et (b) un autre composé antirétroviral.
