Note: Within nine months from the publication of the mention of the grant of the European patent, any person may give notice to the European Patent Office of opposition to the European patent granted. Notice of opposition shall be filed in a written reasoned statement. It shall not be deemed to have been filed until the opposition fee has been paid. (Art. 99(1) European Patent Convention.)
FIELD OF THE INVENTION

This invention relates to a series of C-6-substituted pyrido[1,2-\text{a}]benzimidazole derivatives and to pharmaceutical compositions containing them. The compounds are ligands for the BZD site on GABA-A receptors and are thus useful for the treatment of disorders of the central nervous system.

BACKGROUND OF THE INVENTION

The gamma-aminobutyric acid-A (GABA-A receptor) is the most abundant inhibitory receptor in the brain of mammals. It is comprised of a heteropolymorphic structure that forms a chloride ion channel, and bears multiple recognition sites for the binding of modulatory molecules. The binding of GABA to its specific recognition site on the GABA-A receptor opens the ion channel and allows chloride ions to flow into the nerve cell. This action hyperpolarizes the cell membrane of that neuron and thereby makes the cell less reactive to excitatory stimuli. The chloride ion current may also be regulated by various drugs that serve as positive or negative modulators of the GABA-A receptor (Smith and Olsen, Trends Pharm. Sci., 1995, 16, 162; Stephenson, Biochem. J., 1995, 310, 1). The so-called benzodiazepine (BZD) receptor is a site for such allosteric modulators on the GABA-A receptor. This site mediates two opposing effects, one that amplifies the action of GABA ("positive" efficacy) and the other that reduces the action of GABA ("negative" efficacy). Agents facilitating GABA-receptor/chloride ion-channel functions via the BZD site are referred to as agonists, while agents reducing such function are referred to as inverse agonists. Antagonists at this site block the effects of agonists or inverse agonists by competitively inhibiting their binding. It is thus possible to have a series of compounds in which members equally bind to the BZD site but have equal and opposite regulatory effects on the GABA-A receptor/chloride ion channel. Also, within the series a continuum of activity is possible (Takada, S. et al. J. Med. Chem. 1988, 31, 1738). Thus, BZD receptor ligands can induce a wide spectrum of pharmacological effects ranging from muscle relaxant, hypnotic, sedative, anxiolytic, and anticonvulsant activities, produced by full or partial agonists ("positive"), to the proconvulsant, anti-inebriant, and anxiogenic activities, produced by inverse agonists ("negative"). (A further understanding of this area can be gleaned from: Mohler, H. Arzneim.-Forsch./Drug Res. 1992, 42 (2a), 211; Haefely, W. et al., Advances in Drug Research, Academic Press, vol. 14, 985, pp. 165-322; Skolnick, P. et al. GABA and Benzodiazepine Receptors, Squires, R., Ed., 1987, pp. 99-102 and references cited therein.)

The benzodiazepines are a class of compounds which bind to the BZD receptor with high affinity. Most of the drugs in use are agonist-type ligands for the receptor. Such compounds are generally useful for their anticonvulsant, anxiolytic, sedative, and muscle relaxant effects. Antagonists of the BZD binding site are thus useful for the treatment of benzodiazepine drug overdose and inverse agonists are useful in managing alcoholism.

DISCLOSURE OF THE INVENTION

The present invention is directed to compounds of the following formula:
wherein \( R_1 , R_2 , R_3 , X \) and \( n \) are as defined in claim 1. The compounds of Formula 1 are useful in treating central nervous system disorders. The compounds are ligands for the BZD binding site on GABA-A receptors and are thus useful as muscle relaxants, hypnotics/sedatives including sleep-aids, anxiolytics, antidepressants, anticonvulsants/antiepileptics, anti-inerbriants, and antidotes for drug overdose.

The present invention also comprises pharmaceutical compositions containing one or more of the compounds of formula 1 as the active ingredient and the use of such compounds for the manufacture of a medicament for the treatment of disorders to the central nervous system including convulsions such as epileptic seizures, anxiety, depression, muscular spasms, sleep disorders, attention deficit hyperactivity disorder (ADHD) and benzodiazepine overdoses.

DETAILED DESCRIPTION OF THE INVENTION

More particularly, the present invention is directed to compounds of the general formula:

\[
\begin{align*}
&\text{wherein:} \\
&R_1 \text{ is independently selected from the group consisting of hydrogen; } C_{1-8} \text{alkyl (including } C_{1-8} \text{ straight chain alkyl and } C_{3-8} \text{ branched chain alkyl); halogen; perfluoro-C}_{1-4} \text{alkyl; hydroxy; } C_{1-4} \text{alkoxy; amino; di(C}_{1-4} \text{alkyl)amino; amino(C}_{1-4} \text{alkyl)amino; nitro; } C_{1-4} \text{alkoxycarbonyl; and } C_{1-4} \text{alkythio; There may be up to three independent } R_1 \text{ substituents on the ring (} n = 1-3); } R_1 \text{ is preferably hydrogen, } C_{1-8} \text{alkyl, halogen or } C_{1-4} \text{alkoxy;}
\\
&R_2 \text{ is selected from the group consisting of hydrogen; } C_{1-8} \text{alkyl (including } C_{1-8} \text{ straight chain alkyl and } C_{3-8} \text{ branched chain alkyl); aryl(C}_{1-8} \text{alkyl); heteroaryl(C}_{1-8} \text{alkyl; } (R_4)_2N\text{(CH}_2\text{)}_p \text{ wherein } R_4 \text{ is the same or different and is independently selected from H, } C_{1-8} \text{alkyl, aralkyl, aryl or substituted aryl wherein the substituents are independently selected from } C_{1-4} \text{alkyl, } C_{1-4} \text{alkoxy, nitro, amino or halo, and } p \text{ is 1-5; or } R_4 \text{ together with the nitrogen to which they are attached may form a heterocyclic group selected from piperidinyl, pyrrolidinyl, morpholinyl, thiomorpholinyl, piperazinyl, pyrazolyl, triazolyl, indolyl, indolinyl, imidazolyl, benzimidazolyl, pyrrolyl or indazolyl, preferably morpholinyl, piperidinyl or pyrrolidinyl; } R_2O(CH}_2\text{)}_p \text{ wherein } R_2 \text{ is selected from } C_{1-4} \text{alkyl, aralkyl, aryl or substituted aryl wherein the substituents are independently selected from } C_{1-8} \text{alkyl, } C_{1-4} \text{alkoxy, nitro, amino or halo and } p \text{ is 1-5; and } R_2S\text{(CH}_2\text{)}_p \text{ wherein } R_2 \text{ and } p \text{ are as defined above; } R_2 \text{ is preferably H or } C_{1-8} \text{alkyl;}
\\
&R_3 \text{ is independently selected from the group consisting of aryl; substituted aryl, wherein the substituents are selected from } C_{1-8} \text{alkyl, halo, perfluoro-C}_{1-4} \text{alkyl, hydroxy, } C_{1-4} \text{alkoxy, amino, nitro di(C}_{1-4} \text{alkyl)amino, } C_{1-4} \text{alkoxycarbonyl, amino-C}_{2-8} \text{alkoxy, } C_{1-8} \text{alkylamino-C}_{2-8} \text{alkoxy, di(C}_{1-8} \text{alkyl)amino-C}_{2-8} \text{alkoxy, or } C_{1-4} \text{alkylthio; a heteroaryl group selected from pyridyl; thiadiazolyl; thiophenyl; furyl; indolyl; imidazolyl; benzothiophenyl; pyridazinyl; pyrimidinyl; indole; quinolinyl; indazolyl; benzofuryl; triaziny; pyrazinyl; isquinolinyl; isoxazolyl; thiadiazolyl; benzothiazolyl; triazolyl; or benzotriazolyl; a substituted heterocyclic group wherein the substituent is selected from oxo, halo, perfluoro-C}_{1-4} \text{alkyl, nitro, amino, } C_{1-4} \text{alkylthio, } C_{1-4} \text{alkoxy, } C_{1-4} \text{alkylamino, di(C}_{1-4} \text{alkyl)amino, carboxy or } C_{1-4} \text{alkoxycarbonyl; and cycloalkyl having 3-8 carbon atoms; } R_3 \text{ is preferably aryl, haloaryl, } C_{1-8} \text{alkoxyaryl or heteroaryl;}
\\
&X \text{ is a heterocyclic or carbocyclic ring selected from the group consisting of piperidinyl, pyrrolidinyl, morpholinyl, thiomorpholinyl, piperazinyl, perfluoro-piperazinyl, pyrazolyl, imidazolyl, pyridyl, pyrimidinyl, pyrazidinyl, isoxazolyl, oxazolyl, isoxazolyl, triazolyl, tetrazolyl, oxadiazolyl, dioxazaspirodecanyl, thiadiazolyl, purinyl, benzimidazolyl, benzothiophenyl, benzothiazolyl, indolyl; cyclo(C}_{3-8} \text{alkyl)phenyl; and naphthyl; a substituted heterocyclic, carbocyclic, or aryl ring (as defined in claim 1) wherein the substituents are independently selected from } C_{1-8} \text{alkyl (including } C_{1-8} \text{ straight chain alkyl and } C_{3-8} \text{ branched chain alkyl), halogen, perfluoro-C}_{1-4} \text{alkyl, hydroxy, amino, nitro, o xo, } C_{1-8} \text{alkoxy, di(C}_{1-8} \text{alkyl)amino, } C_{1-4} \text{alkoxycarbonyl, } C_{1-4} \text{alkoxyC}_{4-4} \text{alkyloscarboxyl, aryl, substituted aryl wherein the substituents are independently selected from } C_{1-8} \text{alkyl, } C_{1-4} \text{alkoxy, nitro, amino, or halo;}
\end{align*}
\]
heteroaryl and C$_{1-4}$alkylthio; preferably, X is a heterocyclic ring;

and pharmaceutically acceptable salts thereof.

[0008] As used herein unless otherwise noted the terms "alkyl" and "alkoxy" whether used alone or as part of a substituent group, include straight and branched chains having 1-8 carbon atoms. For example, alkyl radicals include methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl, t-butyl, pentyl, 2-methyl-3-butyl, 1-methylbutyl, 2-methylbutyl, neopentyl, hexyl, 1-methylpentyl, 3-methylpentyl. Alkyl oxides are formed from the previously described straight or branched chain alkyl groups. The term "aryl" is intended to include phenyl and naphthyl. The term "halo", unless otherwise indicated, includes bromo, chloro, fluoro and iodo. The term "cycloalkyl" is intended to include cycloalkyl groups having 3-8 carbon atoms. The term "aralkyl" is intended to include an aryl group attached to a C$_{1-8}$alkyl group, preferably a C$_{1-4}$alkyl group (e.g., benzyl, phenylethyl).

[0009] The term "heteroaryl" is intended to include an aromatic ring containing at least one heteroatom selected from sulfur, oxygen or nitrogen, optionally containing one to three additional heteroatoms independently selected from sulfur, oxygen or nitrogen, such as, but not limited to, pyridyl, thiazolyl, thiophenyl, furyl, indolyl, imidazolyl, benzothiophenyl, pyridazinyl, pyrimidinyl, indolyl, quinolinyl, indazolyl, benzofuryl, isoquinolinyl, triazinyl, pyrazinyl, isoxazolyl, thiazolyl, benzothiazolyl, triazolyl, benzotriazolyl, oxazolyl, and the like.

[0010] The term "heterocyclic ring" is intended to include a saturated, partially unsaturated, partially aromatic or aromatic ring structure containing at least one heteroatom selected from sulfur, oxygen or nitrogen, optionally containing one to three additional heteroatoms independently selected from sulfur, oxygen or nitrogen, such as, but not limited to, piperidinyl, pyrrolidinyl, morpholinyl, thiomorpholinyl, piperazinyl, indolyl, pyrazinyl, triazinyl, indolyl, benzimidazolyl, pyrrolyl, indazolyl, pyrrolidinyl, pyrazinyl, pyrimidinyl, pyridazinyl, thiazolyl, isoazolyl, oxazolyl, dioxaazaspirodecanyl, thiazolyl, purinyl, benzimidazolyl, benzothiazolyl, benzophenyl, benzothiazolyl, indolyl, and the like. The term "carbocyclic ring" is intended to include saturated, partially unsaturated, partially aromatic or aromatic ring structure such as, but not limited to cyclopropyl, cyclobutyl, cyclohexyl, cycloheptyl, cyclooctyl, phenyl, naphthyl, and the like.

[0011] When a particular group (e.g., aryl, heteroaryl) is substituted, that group may have one or more substituents (preferably, one to five, more preferably, one to three, most preferably, one or two substituents) independently selected from the listed substituents. With reference to substituents, the term "independently" means that when more than one of such substituent is possible, such substituents may be the same or different from each other.

[0012] As used herein, the abbreviation "Ph" shall mean phenyl, "Me" shall mean methyl, "Et" shall mean ethyl, "MeOH" shall mean methanol, "EtOH" shall mean ethanol and "EtOAc" shall mean ethyl acetate.

[0013] Those compounds of the present invention which contain a basic moiety can be converted to the corresponding acid addition salts by techniques known to those skilled in the art. Suitable acids which can be employed for this purpose include hydrochloric, hydrobromic, hydriodic, perchloric, sulfuric, nitric, phosphoric, acetic, propionic, glycolic, lactic, pyruvic, oxalic, malonic, succinic, maleic, fumaric, malic, tartaric, citric, benzoic, cinnamic, mandelic, methanesulfonic, p-toluenesulfonic, cyclohexanesulfamic, salicylic, 2-phenoxybenzoic, 2-acetoxycinnamic, or saccharin, and the like. In general, the acid addition salts can be prepared by reacting the free base of compounds of formula 1 with the acid and isolating the salt.

[0014] Where the compounds according to this invention have at least one chiral center, they may accordingly exist as enantiomers. Where the compounds possess two or more chiral centers, they may additionally exist as diastereomers. It is to be understood that all such isomers and mixtures thereof are encompassed within the scope of the present invention. Furthermore, some of the crystalline forms for the compounds may exist as polymorphs and as such are intended to be included in the present invention.

[0015] The compounds of Formula 1 are prepared as outlined in the following Scheme:
More specifically, an appropriately substituted benzoic acid (24) was treated with sodium azide, or under other suitable conditions known to promote a Curtius type rearrangement, to form a substituted nitro aniline (25). Treatment of the nitro aniline (25) with an appropriate nucleophile such as, for example, piperidine, imidazole, thiazole or morpholine, gives the chlorine displaced nitroaniline product (26 in the case of piperidine). The reaction is generally carried out at elevated temperatures (100-125°C). Alternatively, carbon-carbon bond formation can be achieved by suitable protection of the aniline nitrogen of 25 followed by organometallic coupling reactions, e.g. organocopper coupling to incorporate phenyl substitution and Grignard reagent formation followed by condensation with ketones, elimination, and reduction for saturated carbocyclics. In the case of piperidine substitution, nitroaniline 26 is reacted with acrylonitrile in a suitable solvent such as dioxane, tetrahydrofuran or chloroform, for example, at a temperature ranging from room temperature to about 40°C, to incorporate the cyanoalkyl group. The resulting material is then reacted with hydrogen in the presence of a catalyst, such as Pd/C, in a solvent such as ethanol, for example, to form an amino nitrile, which is then reacted with ethoxycarbonylacetic acid under reflux conditions to form 1-cyanoethyl-2-(ethoxycarbonylmethyl) derivative 27. The cyanoalkyl derivative (27) is then hydrolyzed with ethanolic hydrochloric acid to form the 1-(ethoxycarbonyl)-2-(ethoxycarbonylmethyl) derivative (28). The diester (28) is reacted with a base such as, for example, sodium ethoxide, yields the corresponding ethyl ester derivative (29). At this stage the N-5 nitrogen can be further substituted under basic conditions for those compounds of the invention where R₂ is other than hydrogen. Reaction of the ethyl ester (29) with an amine such as, for example, 2,6-difluoroaniline, in a suitable solvent such as xylene, for example, at reflux temperatures yields the substituted benzimidazole-4-carboxamine derivative (10).

During any of the processes for preparation of the compounds of the present invention, it may be necessary and/or desirable to protect sensitive or reactive groups on any of the molecules concerned. This may be achieved by means of conventional protecting groups, such as those described in Protective Groups in Organic Chemistry, ed. J.F.W. McOmie, Plenum Press, 1973; and T.W. Greene & P.G.M. Wuts, Protective Groups in Organic Synthesis, John Wiley
to limit it. All compounds were identified by a variety of methods including nuclear magnetic resonance spectroscopy,
mass spectrometry and in some cases, infrared spectroscopy and elemental analysis. Nuclear magnetic resonance
(300 MHz NMR) data are reported in parts per million downfield from tetramethylsilane. Mass spectra data are reported
charge (m/z) units. Unless otherwise noted, the materials used in the examples were obtained from readily
available commercial sources or synthesized by standard methods known to those skilled in the art.

Example 1.

**Pyrido[1,2-a]benzimidazole-4-carboxamide, N-(2,6-difluorophenyl)-1,2,3,5-tetrahydro-3-oxo-6-(1-piperidinyl)-
(#10).**

**[0021]**

**A.** Preparation of 3-(1-piperidinyl)-2-nitroaniline (26). Compound (25) was prepared from compound (24) by the
method described in W. N. White and J. R. Klink J. Org. Chem. 1977, 42, 166. A mixture of 5 g (0.03 mol) of 3-chloro-
2-nitroaniline (25) and 15 mL of piperidine was heated to 120°C for 1.5 h, the mixture was cooled, and excess
piperidine was evaporated off under reduced pressure while maintaining the water bath temperature below 50°C.
After cooling, the residue was redissolved in methylene chloride, washed with water and brine, dried (Na$_2$SO$_4$),
and concentrated to provide 26 as a brown syrup, which was stored under argon. MS m/z = 222(M+H). 300-MHz $^1$H
NMR (CDCl$_3$) δ 7.10 (t, 1H), 6.30-6.40 (m, 2H), 4.80 (s, broad, 2H), 2.90 (m, 4H), 1.55-1.70 (m, 4H), 1.49-1.54 (m,
2H). Compound 26 was used in the next step without further purification.

**B.** 1-(2-Cyanoethyl)-2-(ethoxycarbonylmethyl)-4-(1-piperidinyl)benzimidazole (27). A 40% solution of benzyltrimeth-
ylammonium hydroxide in MeOH (2.6 mL) was added to a solution of 3-(1-piperidinyl)-2-nitroaniline (6) (6.4 g, 0.03
mol) in dioxane (70 mL) at room temperature. Acrylonitrile (3.0 g, 0.06 mol) was added dropwise to the reaction
mixture, and the resulting exotherm was controlled by means of an external ice bath so that the temperature did not
increase past 35-40°C. The solution was then stirred at room temperature for 24 h and concentrated under vacuum,
while maintaining the water-bath temperature below 50°C, to give a dark yellow syrup (10.0 g). This air sensitive
cyanoalkyl compound was immediately dissolved in 200 mL of ethanol and 30 mL of THF (tetrahydrofuran), and
the resultant solution was treated with 10% Pd/C (1.5 g), placed in a Parr bottle, and hydrogenated at 50-60 psig
for 3-4 h. The resultant aminonitrile was treated under inert atmosphere with ethoxycarbonylaceticamidite hydrocho-
ride (5.8 g, 0.03 mol), heated under reflux for 12 h, and allowed to cool to room temperature overnight. The mixture was filtered and the filtrate concentrated in vacuo to provide a gray residue, which was redissolved in methylene chloride, washed once with water, once with brine, dried (Na₂SO₄), filtered, and concentrated in vacuo. The residue was purified on a Waters prep-500 HPLC (ethylacelate:hexane, 1:1) to give cyanoalkyl benzimidazole 27 as a pale yellow syrup. MS m/z = 341 (M+H). 300-MHz ¹H NMR (CDCl₃) δ 7.50 (t, 1H), 6.80 (d, 1H), 6.65 (d, 1H), 4.40 (t, 2H, CH₂N), 4.20 (q, 2H, CH₃), 4.05 (s, 2H, CH₂CO₂), 3.50 (m, 4H), 2.90 (t, 2H), 1.75 (m, 4H), 1.65 (m, 2H), 1.30 (t, 3H).

C. 1-[2-(Ethoxycarbonyl)ethyl]-2-(ethoxycarbonylmethyl)-4-(1-piperidinyl)benzimidazole (28). Cyanoalkyl derivative 27 (5.02 g, 0.015 mol) was treated with 6N ethanolic HCl (60 mL) and the mixture was stirred under argon for 14 h. The solution was concentrated in vacuo to a syrup, which was treated with ice and water, neutralized with 15% NaOH (pH = 8-10), and extracted into methylene chloride. The extracts were washed with brine, dried (Na₂SO₄), filtered, and concentrated in vacuo to give desired diester 28 as a light brown solid: mp 82-85°C. MS m/z = 388 (M+H). 300-MHz ¹H NMR (CDCl₃) δ 7.5 (t, 1H), 6.80 (d, 1H), 6.65 (d, 1H), 4.45 (t, 2H, CH₂N), 4.18-4.25 (q, 2H), 4.10 (s, 2H, CH₂CO₂), 4.05-4.14 (q, 2H), 3.45 (m, 4H), 2.85 (t, 2H), 1.75 (m, 4H), 1.65 (m, 2H), 1.24-1.31 (t, 3H), 1.12-1.23 (t, 3H).

D. Pyrido[1,2-α]benzimidazole-4-ethoxycarbonyl, 1,2,3,5-tetrahydro-3-oxo-6-(1-piperidinyl)- (29). Sodium (1.18 g, 0.05 mol) was added to a stirred solution of absolute EtOH (60 mL) under argon until all solids dissolved. Diester derivative 28 (4.90 g, 0.013 mol) in 10 mL of ethanol was added dropwise to the sodium ethoxide solution thus prepared, and the mixture was stirred for 24 h. It was then concentrated in vacuo to a yellow solid, which was suspended in water (20 mL) and the pH was then adjusted to 8-10 by addition of 1N HCl. The resulting precipitate was filtered and dried under vacuum at 40°C to give derivative 29 as a solid: mp 206-208°C. MS m/z = 342 (M+H). 300-MHz ¹H NMR (CDCl₃) δ 11.00 (s, broad, 1H), 10.00 (s, 1H), 7.25-7.39 (m, 3H), 7.10-7.24 (m, 2H), 7.00 (m, 1H), 4.30 (t, 2H), 3.00-3.20 (m, 4H), 2.80 (t, 2H), 1.70-1.80 (m, 4H), 1.55-1.65 (m, 2H). Anal. calc’d for C₃₂H₃₀N₃O₂•HCl•0.5H₂O: C, 73.65; H, 5.00; N, 11.93; KF, 0.60. Found: C, 73.92; H, 5.15; Cl, 7.54; N, 11.92; KF, 0.92. Compound 29 was recrystallized from a mixture of methylene chloride and 95% ethanol to afford the title compound (10) as a light yellow solid: mp 240-241°C. MS m/z = 425 (M+H). 300-MHz ¹H NMR (DMSO-d₆) δ 11.15 (s, 1H), 7.25-7.39 (m, 3H), 7.15-7.24 (m, 2H), 7.00 (m, 1H), 4.30 (t, 2H), 3.00-3.20 (m, 4H), 2.80 (t, 2H), 1.70-1.80 (m, 4H), 1.55-1.65 (m, 2H).

E. Pyrido[1,2-α]benzimidazole-4-carboxamide, N-(2,6-difluorophenyl)-1,2,3,5-tetrahydro-3-oxo-6-(1-piperidinyl)- (10). Ethyl ester 29 (7.10 g, 0.02 mol) and 2,6-difluoroaniline (7.5 g, 0.058 mol) were combined in xylenes (180 mL) and heated to reflux for 6 h. The resulting solution was concentrated in vacuo to give desired diester 10 (8.5 g) as a light brown solid which was treated with ethanolic HCl solution to afford the monohydrochloride salt. This material was recrystallized from methylene chloride and ethanol. mp 240-242°C. MS m/z = 425 (M+H). 300-MHz ¹H NMR (DMSO-d₆) δ 11.15 (s, 1H), 7.25-7.39 (m, 3H), 7.15-7.24 (m, 2H), 7.00 (m, 1H), 4.30 (t, 2H), 3.00-3.20 (m, 4H), 2.80 (t, 2H), 1.70-1.80 (m, 4H), 1.55-1.65 (m, 2H). Anal. calc’d for C₂₃H₂₂F₂N₂O₂•HCl•0.5H₂O: C, 58.79; H, 5.15; Cl, 7.54; N, 11.92; KF, 0.92. Found: C, 58.99; H, 4.94; Cl, 7.19; N, 11.93; KF, 0.88.

[0022] Compounds 9 and 11 (see Table 1) were prepared in a similar manner using either 2-fluoroaniline or 4-methoxyaniline, respectively, instead of 2,6-difluoroaniline in step E. Compound 4 was prepared in a similar manner using morpholine instead of piperidine in step A. Compound 14 was prepared in a similar manner using thiomorpholine instead of piperidine in step A and 2-fluoroaniline instead of 2,6-difluoroaniline in step E. Compounds 3, 7, and 8 were prepared in a similar manner using morpholine instead of piperidine in step A and either 2-fluoroaniline, 4-methoxyaniline, or 3-methoxyaniline, respectively, instead of 2,6-difluoroaniline in step E. Compound 6 was prepared in a similar manner using 1-(2-methoxyphenyl)piperazin-4-yl instead of piperidine in step A. Compound 8 was prepared in a similar manner using 1-(2-methoxyphenyl)piperazin-4-yl instead of piperidine in step A and 2-fluoroaniline instead of 2,6-difluoroaniline in step E.
Example 2.

Pyrido[1,2-a]benzimidazole-4-carboxamide, N-2-fluorophenyl-1,2,3,5-tetrahydro-3-oxo-6-[8-(1,4-dioxa-8-azaspiro[4,5]decanyl)]- (#20).

[0023]

A. 3-Chloro-2-nitro-N-(2-cyanoethyl)aniline (30). Triton B (0.04 ml, 4 mol%) was added to a solution of 25 (1.0 gm, 5.8 mmol) in dioxane (20 ml). After cooling to 0°C, acrylonitrile (1.53 ml, 23 mmol) was added. The resulting solution was stirred at room temperature overnight. The solvent was vacuum evaporated and the residue was subjected to
column chromatography (CHCl₃) to give 30. MS MH⁺ 226.0. ¹H NMR (300 MHz, CDCl₃) δ 2.69 (t, 2H, J=6.86 MHz, J=6.78 MHz), 3.62 (t, 2H, J=5.99 MHz, J=6.15 MHz), 5.85 (m, 1H, NH), 6.74 (d, 1H, J=8.57 MHz), 6.87 (d, 1H, J=8.57 MHz), 7.28 (t, 1H, J=8.57 MHz, J=8.57 MHz).

B. 3-[8-(1,4-Dioxa-8-azaspiro[4,5]decanyl)]-2-nitro-N-(2-cyanoethyl)aniline (31). Compound 30 (23 gm, 0.1 mol) and 1,4-dioxo-8-azaspiro[4,5]decane (35 gm, 0.24 mol) was heated to 80°C overnight. The resulting mixture was separated by column chromatography (1:4 EtOAc/hexane) to give 31. MS MH⁺ 333.1. ¹H NMR (300 MHz, CDCl₃) δ 1.83 (t, 4H, J=8.57 MHz, J=7.71 MHz), 2.67 (t, 2H, J=8.57 MHz, J=8.57 MHz), 3.14 (t, 4H, J=4.28 MHz, J=7.71 MHz), 3.58 (m, 2H), 3.99 (s, 4H), 6.05 (m, 1H, NH), 6.33 (d, 1H, J=9.0 MHz), 6.46 (d, 1H, J=9.1 MHz), 7.22 (t, 1H, J=9.0 MHz, J=9.1 MHz).

C. 3-[8-(1,4-Dioxa-8-azaspiro[4,5]decanyl)]-2-amino-N-(2-cyanoethyl)aniline (32). A solution of 31 (11.1 gm) in EtOAc (50mL) was placed in a hydrogenation bottle and the bottle was flushed with nitrogen. Palladium (10% Pd/C, 2.2 gm) was added and the mixture was subjected to hydrogenation under 53 psig for 2 hrs. The catalyst was filtered and the solvent was evaporated under vacuum to give 32. MS MH⁺ 303.1. ¹H NMR (300 MHz, CD₂OD) δ 1.86 (m, 4H), 2.72 (t, 2H, J=7.71 MHz, J=7.81 MHz), 2.88 (m, 4H), 2.95 (t, 2H, J=7.71 MHz, J=7.81 MHz), 3.93 (s, 4H), 6.05 (m, 1H, NH), 6.46 (d, 1H, J=9.0 MHz), 6.59 (d, 1H, J=8.57 MHz), 6.67 (t, 1H, J=8.57 MHz, J=9.0 MHz).

D. 1-(2-Cyanoethyl)-2-(ethoxycarbonylmethyl)-4-[8-(1,4-dioxa-8-azaspiro[4,5]decanyl)]benzimidazole (33). A solution of 32 (7.5 gm, 0.025 mol) in EtOH (100 mL) was refluxed overnight. The solvent was evaporated under vacuum and the mixture was purified by column chromatography (1:3 EtOAc/hexane) to give 33. MS MH⁺ 399.0. ¹H NMR (300 MHz, CDCl₃) δ 1.21-1.30 (m, 3H), 1.55 (s, 2H), 1.97 (m, 4H), 2.95 (t, 1H, J=7.71 MHz, J=7.81 MHz), 3.63 (m, 4H), 4.03 (s, 4H), 4.20 (q, 2H), 4.46 (t, 2H, J=8.57 MHz, J=7.71 MHz), 6.69 (d, 1H, J=9.0 MHz), 6.85 (d, 1H, J=9.43 MHz), 7.11 (t, 1H, J=9.43 MHz, J=9.0 MHz).

E. 1-[2-(Ethoxycarbonyl)ethyl]-2-(ethoxycarbonylmethyl)-4-[8-(1,4-dioxa-8-azaspiro[4,5]decanyl)]benzimidazole (34). A solution of 33 (7.5 gm, 0.019 mol) in 1N HCl/EtOH (120 mL) was refluxed for 2 hrs. The solution was then added to water (20 mL) and extracted with EtOAc (100 mL). The solvent was dried with sodium sulfate and evaporated to give 34. MS MH⁺ 446.6. ¹H NMR (300 MHz, CDCl₃) δ 1.51-1.55 (m, 3H), 1.99 (s, 2H), 2.06 (s, 2H), 2.87 (t, 2H), 3.63 (m, 4H), 4.0 (s, 4H), 4.05-4.15 (m, 4H), 4.41 (t, 2H, J=8.14 MHz, J=8.57 MHz), 6.65 (d, 1H, J=8.51 MHz), 6.89 (d, 1H, J=8.57 MHz), 7.14 (t, 1H, J=8.51 MHz, J=8.57 MHz).

F. Pyrido[1,2-a]benzimidazole-4-ethoxycarbonyl. 1,2,3,5-tetrahydro-3-oxo-6-[8-(1,4-dioxa-8-azaspiro[4,5]decanyl)]- (35). A solution of 34 (3.85 gm, 0.0086 mol) in EtOH (20 mL) was added to a solution of sodium (0.37 gm, 0.016 mol) in 1N HCl/EtOH (120 mL) was refluxed for 2 hrs. The solution was then added to water (20 mL) and extracted with EtOAc (100 mL). The solvent was dried with sodium sulfate and evaporated under vacuum to give 35. MS MH⁺ 399.7. ¹H NMR (300 MHz, CD₂OD) δ 1.48 (t, 3H, J=8.57 MHz, J=6.89 MHz), 1.95 (m, 4H), 2.80 (t, 2H, J=5.99 MHz, J=7.71 MHz), 3.20 (m, 4H), 4.0 (s, 4H), 4.20-4.32 (m, 4H), 6.96 (d, 1H, J=7.71 MHz), 7.13 (d, 1H, J=8.57 MHz), 7.27 (t, 1H, J=8.57 MHz, J=7.71 MHz).

G. Pyrido[1,2-a]benzimidazole-4-carboxamide, N-2-fluorophenyl-1,2,3,5-tetrahydro-3-oxo-6-[8-(1,4-dioxa-8-azoniaspiro[4,5]decanyl)]- (20). A solution of 35 (2.0 gm, 6.46 mmol) and 2-fluorobenzene (1.1 ml, 19 mmol) in xylene (50 mL) was refluxed overnight. The reaction mixture was then cooled to room temperature and the product precipitated. The crude solid was filtered and the product was purified by column chromatography (1:3 EtOAc/hexane) to give 20. MS MH⁺ 465.0. ¹H NMR (300 MHz, CDCl₃) δ 2.0 (m, 4H), 2.94 (t, 2H, J=8.57 MHz, J=7.73 MHz), 3.23 (m, 4H), 4.0 (s, 4H), 4.18 (t, 2H, J=8.21 MHz, J=7.99 MHz), 6.88 (m, 2H), 7.0 (m, 1H), 7.08 (m, 2H), 7.21 (t, 1H, J=8.57 MHz, J=7.71 MHz), 8.44 (t, 1H, J=8.71 MHz, J=9.0 MHz). Anal. calcd for C₂₅H₂₃N₃O₂F•0.9 HCl•0.1 H₂O: C, 60.16; H, 5.27; N, 11.23; Cl, 7.10. Found: C, 60.76; H, 4.83; N, 11.53; Cl, 7.08.

Example 3.

Pyrido[1,2-a]benzimidazole-4-carboxamide, N-2-fluorophenyl-1,2,3,5-tetrahydro-3-oxo-1-(4-oxopiperidinyl)- (#23).

[0024] A solution of 20 (0.4 gm) in THF (5 mL) and 1N HCl in water (5 mL) was refluxed for 2 hrs. The solution was then added to water (10 mL) and the resultant mixture was extracted with EtOAc (50 mL). The solvent was dried with sodium sulfate and evaporated under vacuum to give 23 as a crude oil which was purified by column chromatography.
Example 4.

Pyrido[1,2-a]benzimidazole-4-carboxamide, N-2 fluorophenyl-1,2,3-trihydro-3-oxo-5-methyl-6-[8-(1,4-dioxa-8-azaspiro[4,5]decanyl)]- (#21)

[0025]

[0026] MeOH(0.04 mL, 1.1 mmol) was added to a solution of 20 (0.25 gm, 0.538 mmol), triphenylphosphine (Ph3P) (0.42 gm, 1.6 mmol), diethylazodicarboxylate (DEAD) (0.25 ml, 1.6 mmol) in CH2Cl2 (5 mL). The resultant solution was then stirred at room temperature overnight. The solvent was evaporated by vacuum, and the crude product was purified by chromatography to isolate 21. MS MH+ 479.0. 1H NMR (300 MHz, CDCl3) δ 1.85-2.05 (m, 4H), 2.80 (t, 2H, J=6.42 MHz, J=7.28 MHz), 2.97-3.05 (m, 2H), 3.29-3.47 (m, 2H), 4.02 (s, 4H), 4.05 (s, 3H), 4.15 (m, 2H), 6.95 (t, 2H, J=8.14 MHz, J=7.28 MHz), 7.08 (m, 2H), 7.26 (m, 2H), 8.48 (t, 1H, J=8.14 MHz, J=8.57 MHz), 11.96 (s, 1H, NH). Anal. calc’d for C26H27N4O4F•1.8 HCl: C, 54.47; H, 4.64; N, 9.47; F, 3.79; Cl, 16.63.

[0027] Compounds 12, 15, 16, and 18 were prepared in a similar manner starting from 3, 14, 17, and 9, respectively, instead of 20.
Example 5.

Pyrido[1,2-a]benzimidazole-4-carboxamide, N-2-fluorophenyl-1,2,3,5-tetrahydro-3-oxo-6-(1-imidazolyl)- (#2).

[0028]

A. 3-(1-Imidazolyl)-2-nitroaniline (36). Compound 25 (26.7 g, 0.154 mol) and imidazole (66 g, 0.97 mol) were heated together at 180°C under nitrogen. After 18 hrs, water (400 mL) was added with stirring, the product extracted into methylene chloride and the solution was washed with saturated aqueous NaCl. The organic layer was concentrated to give 36 as an orange semi-solid. MS m/e 205 (MH+).

B. 3-(1-Imidazolyl)-2-nitro-N-(2-cyanoethyl)aniline (37). A solution of 36 (10.6 g, 52 mmol), 40% Triton-B (1.37 mL, 40 mmol), and acrylonitrile (4.03 g, 76 mmol) in dioxane (170 mL) was stirred for 18 hrs at room temperature. The solution was then treated with ether (ca. 200 mL), and the precipitate was filtered to give 11.3 g of 37.

C. 3-(1-Imidazolyl)-2-amino-N-(2-cyanoethyl)aniline (38). Compound 37 (11.1 g) and palladium (10% Pd/C, 3 g) in THF (500 mL) was shaken under 50 psig of hydrogen for 18 hrs. The suspension was filtered, and the filtrate
concentrated to yield 38 as a syrup.

D. 1-(2-Cyanoethyl)-2-(ethoxycarbonylmethyl)-4-(1-imidazolyl)benzimidazole (39). Ethyl ethoxycarbonylacetic acid (29 g) was added to a solution of 38 (11 g, 0.048 mol) in EtOH (240 mL). The resultant solution was heated at reflux for 2.5 hrs and then allowed to sit at room temperature overnight. The solvent was removed, and the residue was dissolved in methylene chloride. The solution was washed with water, saturated aqueous NaCl, and concentrated to afford 39 as a white solid which was recrystallized from EtOH/water.

E. 1-[2-(Ethoxycarbonyl)ethyl]-2-(ethoxycarbonylmethyl)-4-(1-imidazolyl)benzimidazole (40). A solution of 39 (5.8 g) in 6N HCl/EtOH (8 mL) was stirred at room temperature for 6 hrs. The solution was concentrated, treated with water (1 mL), and neutralized with 15% NaOH/water to a pH of 10. The product was extracted into methylene chloride. The solution was dried (sodium sulfate), filtered, and concentrated to give 40 as a syrup.

F. Pyrido[1,2-\(a\)]benzimidazole-4-ethoxycarbonyl, 1,2,3,5-tetrahydro-3-oxo-6-(1-imidazolyl)- (41). A solution of 40 (5.3 g) and sodium (0.62 g) in ethanol (65 mL) was stirred at room temperature for 24 hrs. The solution was concentrated, treated with water (30 mL), neutralized with 1N HCl in water to a pH of 10, and solid precipitated. The precipitate was filtered to give 41. MS MH\(^+\) 325.

G. Pyrido[1,2-\(a\)]benzimidazole-4-carboxamide, N -2-fluorophenyl-1,2,3,5-tetrahydro-3-oxo-6-(1-imidazolyl)- (2). A solution of 41 (1.20 g, 3.0 mmol) and 2-fluoroaniline (0.67 g) in xylenes (40 mL) was heated at reflux for 4 hrs. The solution was concentrated, treated with 6N HCl in EtOH, triturated with ether, and filtered to give an off-white solid which was recrystallized from 95% EtOH to give 2. MS MH\(^+\) 390. \(^1\)H NMR (300 MHz, DMSO-\(d_6\)) \(\delta\) 2.88 (t, 2H, J=5.14 MHz, J=6.0 MHz), 4.43 (t, 2H, J=5.14 MHz, J=6.0 MHz), 6.92-6.97 (m, 1H), 7.04-7.08 (m, 1H), 7.23 (m, 1H), 7.5 (m, 2H), 7.79 (s, 1H), 7.98 (s, 1H), 8.17 (s, 1H), 8.43 (t, 1H), 9.53 (s, 1H), 12.18 (s, 1H), 12.70 (s, 1H). Anal. calc’d for C\(_{21}\)H\(_{16}\)FN\(_5\)O\(_2\)•HCl•0.5H\(_2\)O: C, 58.00; H, 4.17; N, 10.19; H\(_2\)O, 2.07. Found: C, 57.91; H, 4.08; N, 16.02; H\(_2\)O, 1.04.

[0029] Compound 1 (see Table 1) was prepared in a similar manner using 2,6-difluoroaniline instead of 2-fluoroaniline in step G. Compound 17 was prepared in a similar manner using 2-aminothiazole instead of 2-fluoroaniline in step G.

Example 6.

Pyrido[1,2-\(a\)]benzimidazole-4-carboxamide, N-2-fluorophenyl-1,2,3-trihydro-3-oxo-5-methyl-6-(1-imidazolyl)- (13).

[0030] MeOH (0.5 mL) was added to a solution of 2 free base (1.6 gm, 4.1 mmol), Ph\(_3\)P (3.23 gm, 12.3 mmol), DEAD (1.95 mL, 12.3 mmol) in CH\(_2\)Cl\(_2\) (40 mL). The resultant solution was then stirred at room temperature overnight and the solvent was evaporated by vacuum. The crude product was purified by column chromatography (2% MeOH/CHCl\(_3\)) to give 13. MS MH\(^+\) 404.0. \(^1\)H NMR (300 MHz, CDCl\(_3\)) \(\delta\) 2.80 (t, 2H, J=6.0 MHz, J=5.14 MHz), 3.24 (s, 3H), 4.22 (t, 2H, J=5.14 MHz, J=6.0 MHz), 6.92-6.97 (m, 1H), 7.0-7.08 (m, 2H), 7.79 (s, 1H), 8.3 (t, 1H), 8.57 (m, 3H), 8.34 (t, 1H), 8.17 (s, 1H), 11.79 (s, 1H). Anal. calc’d for C\(_{22}\)H\(_{18}\)F\(_2\)N\(_5\)O\(_2\): C, 53.00; H, 4.13; N, 14.05; F, 3.81; Cl, 19.21. Found: C, 53.21; H, 4.23; N, 13.68; F, 3.69; Cl, 19.70.

12
Example 7.

Pyrido[1,2-\text{a}]benzimidazole-4-carboxamide, \(N(2\text{-fluorophenyl})-1,2,3\text{-tri hydro}-3\text{-oxo}-5\text{-methyl}-6\text{-}(1\text{-piperazinyl})\)- (#19).

[0031]

A. 3-\{(4-t\text{-Butoxycarbonyl)-1-piperazinyl)-2-nitro-N-(2-cyanoethyl)aniline (42)}\). A mixture of 30 (3.50 g, 0.016 mol) and \(t\text{-butoxycarbonylpiperazine (5.77 g, 0.031 mol)}\) was heated at 120° C for 18 hrs, cooled, and dissolved in ethanol (100 ml) from which precipitated a yellow crystalline solid of 42 (MS MH+ 376).

B. 3-\{(4-t\text{-Butoxycarbonyl)-1-piperazinyl)-2-nitro-N-(2-cyanoethyl)aniline (43)}\). A solution of 42 (1.00 g, 0.003 mol) and 10% Pd-C catalyst (0.052 g) in THF (15 mL) was shaken under 45-50 psig hydrogen for 48 hr. Filtration and evaporation gave a purple solid which was passed through flash silica (95/5 methylene chloride:methanol as eluant), to afford 43 as an off-white crystalline solid.

C. 1-(2-Cyanoethyl)-2-(ethoxycarbonylmethyl)-4-(4-t-butoxycarbonyl-1-piperazinyl)benzimidazole (44). A solution of 43 (2.20 g, 0.006 mol) and ethylmalonyl chloride (0.98 g, 0.007 mol) in ethyl acetate (20 mL) was refluxed overnight. Another 0.10 mL of ethylmalonyl chloride was added and the reaction was refluxed for 4 hr. After cooling, a light purple solid of 44 was filtered and isolated.

D. 1-(2-Ethoxycarbonyl)ethyl)-2-(ethoxycarbonylmethyl)-4-(1-piperazinyl)benzimidazole (45). A solution 44 (0.50g, 0.001 mol) in ethanol (25 mL) was treated with anhydrous HCl gas until the reflux ceased. The reaction mixture was refluxed for 15 min additionally, stirred at room temperature for 2 hr, and then evaporated. The residue was dissolved in water (3.0 mL), basified with 3N NaOH solution, and the solution was extracted with ethyl acetate. The organic phase was separated, dried, and evaporated to give diester 45 as a yellow-orange oil.

E. 1-(2-Ethoxycarbonyl)ethyl]-2-(ethoxycarbonylmethyl)-4-(4-t-butoxycarbonyl-1-piperazinyl)benzimidazole (46). A solution of 45 (0.68 g, 0.002 mol), \(d\text{-t-butyldicarbonate (0.47 g, 0.002 mol)}\), water (3 mL), and dioxane (3 mL) was stirred at room temperature for 6 hr and then treated with methylene chloride (20 mL) and 3N NaOH with thorough mixing. The organic layer was separated, dried, and evaporated to give 46 as a light colored oil.

F. Pyrido[1,2-\text{a}]benzimidazole-4-ethoxycarbonyl-1,2,3,5-tetrahydro-3-oxo-6-(4-t-butoxycarbonyl-1-piperazinyl)- (47). A solution of 46 (0.91 g, 0.002 mol) and ethanol (9 mL) was treated with sodium (0.17 g, 0.007 mol) and stirred overnight at room temperature. The ethanol was evaporated and water (5 mL) was added to the residue. After adjusting to pH 8 with 1 N HCl, a solid of 47 formed which was collected by filtration (MS MH+ 443.4).

G. Pyrido[1,2-\text{a}]benzimidazole-4-carboxamide, \(N(2,6\text{-difluorophenyl})-1,2,3,5\text{-tetrahydro}-3\text{-oxo}-6-(4\text{-t-butoxy carbonyl-1-piperazinyl})\)- (48), Compound 47 (0.38 g, 0.0008 mol) was treated with 2-fluoroaniline (0.269 g, 0.002 mol) in xylene (5 mL) at reflux overnight. Filtration of the solid that precipitated afforded 48 as a cream-colored solid (MS MH+ 508.4).

H. Pyrido[1,2-\text{a}]benzimidazole-4-carboxamide, \(N(2\text{-fluorophenyl})-1,2,3\text{-tri hydro}-3\text{-oxo}-5\text{-methyl}-6\text{-}(4\text{-t-butoxy carbonyl-1-piperazinyl})\)- (49), A mixture of 48 (0.071 g, 0.0001 mol), methanol (0.0138 g, 0.0004 mol), triphenylphosphine (0.108 g, 0.0004 mol), and THF (5 mL) was treated with diethylazodicarboxylate (0.072 g, 0.004 mol) and stirred at room temperature for 3 hr. The reaction mixture was evaporated to a residue which was passed through flash silica (95:5 methylene chloride:methanol) to give an oil. Diethyl ether was added causing a crystalline solid of 49 to form which was isolated by filtration (MS MH+ 522.2).

I. Pyrido[1,2-\text{a}]benzimidazole-4-carboxamide, \(N(2\text{-fluorophenyl})-1,2,3\text{-tri hydro}-3\text{-oxo}-5\text{-methyl}-6\text{-}(1\text{-piperazinyl})\)- (19), Compound 49 (0.066 g, 0.0001 mol) was treated with trifluoroacetic acid (0.643 g, 0.006 mol) in methylene chloride (1 mL) at room temperature for 2 hr. The solvents were evaporated and the residue was dissolved in methylene chloride and mixed thoroughly with 3N NaOH. The organic layer was separated, dried and evaporated to give 0.050 g of a clear oil. The material dissolved in ethanol and treated with fumaric acid (0.017 g). A crystalline fumarate solid formed which was isolated by filtration to give 19 as a white solid (MS MH+ 422.5).
Example 8.

Pyrido[1,2-ajbenzimidazole-4-carboxamide, N-2-fluorophenyl-1,2,3-trihydro-3-oxo-5-methyl-6-[4-(2-methoxyacetyl)-1-piperazinyl]- (##22).

[0032] A mixture of 19 (0.030 g, 0.07 mmol), N,N-diethylaminopropyl-N-ethylcarbodiimide hydrochloride (0.027g, 0.14 mmol), methoxyacetic acid (0.0064 g, 0.071 mmol), and methylene chloride (1 mL) was stirred at room temperature overnight. The reaction mixture was treated with 3N NaOH with vigorous stirring. The organic layer was separated, dried, and evaporated affording 22 as a solid (MS MH+ 494.2).

[0033] The compounds of this invention were tested for affinity for the benzodiazepine sites of the GABA-A receptor. Since compounds which bind to this receptor can be useful in treating central nervous system disorders, the compounds were also tested in appropriate screens to evaluate specific activities. The results of the various screens are shown in Table 1.

Benzodiazepine Receptor Binding Assay

[0034] Selected compounds, which were prepared according to the experimental details given in the following examples, were tested for binding to the benzodiazepine site of the GABA-A receptor (Williams, M. et al., J. Pharm. Exper. Therap. 1988, 248, 89). The ability of the compounds of the invention to inhibit the binding of flunitrazepam to prepared receptors was assessed. For each sample, membranes from ca. 10 mg of tissue were incubated in a K2HPO4-buffered incubation medium (final concentration = 2.0 mL). The concentration of ligand ([3H-flunitrazepam) was ca. 3 nM. Samples were incubated 10-20 min at 25°C, after which the membrane material and bound ligand was collected on glass fiber filter sheets using vacuum filtration. The collected material was washed with 10 mM HEPES buffered solution, and the radioactivity associated with each sample was measured by liquid scintillation spectrometry. The binding of the test drug to the receptor was determined by comparing the amount of radiolabeled ligand bound in control samples to the amount of ligand bound in the presence of the drug. Concentration-response data were analyzed in a variety of ways. The IC50 was usually calculated by transforming the data to a log-logit format, then performing a linear regression analysis. This procedure provides a Hill coefficient as well as the IC50 value. The IC50 value, for all tested compounds is listed in Table 1 in the fourth column from the right margin. An IC50 value of over 10,000 for a particular compound would indicate that the compound was not active in this screen. This is a general screen and compounds active here have potential utility for the treatment of one or more disorders of the central nervous system.

Assay to Determine the Suppression of Metrazol-Induced Convulsions in Adult Male Mice

[0035] Compounds of the invention were tested for their ability to reduce metrazol-induced convulsions in mice (Swinyard, E.A. J. Am. Pharm Assoc. 1949, 38, 201). Male CD1 mice, were fasted at least 16 hours, were divided into equal groups and test compounds or vehicle were administered parenterally. Water was not withheld except during the period of observations. At the time of suspected peak activity, anti-pentylenetetrazol (anti-metrazol) activity was evaluated by the subcutaneous administration of the CD90 dose of metrazol (the dose of metrazol was determined from the dose-response curve producing clonic convulsions in 90% of animals that received the corresponding vehicle for this experiment). Metrazol was dissolved in 0.9% sodium chloride solution, and its dose volume was 10 mL/kg. Animals were housed individually for observation of clonic convulsions, tonic convulsions and death for a period of 30 min. Test compounds that blocked the clonic seizure component of the convulsion in at least 50% of the animals were considered active. The biological assay was considered to be valid if the effects of a known anticonvulsant (positive control) were detected, within the same experiment. Activity was reported as percent reduction of clonic convulsions from the vehicle group. The ED50 values of active compounds were calculated by the method of probits (Finney, D. J. Probit Analysis, London: 1971, Cambridge University Press) and are listed in Table 1. An ED50 value of greater than 30 indicates that an active dose for the compound being tested had not been determined. Compounds active in this screen are considered active anticonvulsion/antiepileptic agents, as well as having potential anxiolytic activity. The data for the test compounds is listed in Table 1 as Met. for either PO (oral) or IP (parenteral) routes of administration.

Assay to Measure the Suppression of Anxiety in the Adult Male Rat

[0036] The anxiolytic activity of selected compounds of the invention was assessed by determining their ability to release (dissinhibit) behavior that had been suppressed by punishment (Vogel, J.R. et al. Psychopharmacology 1971, 21, 1). Male rats were deprived of water for 48 hrs and were deprived of food for 24 hrs prior to testing. After the first 24 hours of water deprivation, they were placed in the conflict chamber for a training period; wherein, they were allowed 200 unpunished licks from a bottle containing tap water. The experiment was run the next day. At the expected time of
peak activity, the animals were placed in the chamber and allowed access to tap water. If they failed to drink, the experiment was terminated in 5 min, and animals were evaluated for signs of CNS depression. Their first lick initiates a 3-min test session. Subsequently, every 20th lick was punished by a 0.2-s shock delivered via the stainless-steel drinking-tube. Vehicle-treated control animals generally were willing to accept a median number of 3 to 8 shocks per test session. Animals treated with an active anxiolytic drug tolerated significantly more shocks than control animals. The Wilcoxon rank-sum test (Mann-Whitney U-test) was used to test for an increase (p<0.05, 1-tailed) in the median number of shocks in drug-treated groups, compared to a concurrently run vehicle-treated group. The biological assay is considered to be valid if the effects of a known anxiolytic (positive control) are detected, within the same experiment. A compound was considered active if there is a significant difference in the median number of shocks tolerated between the drug-treated group and the control group. The minimum effective doses (MED) for the active compounds of the invention are listed in Table 1 under the heading Conf., with PO indicating an oral route of administration. The MED was defined as the minimum dose of the drug-treatment as analyzed using the Wilcoxon rank-sum test (SAS; Statistical Analysis System, version 5.16). If the MED value is greater than 10, an active dose of the compound being tested had not been determined.

**Table 1.** Biological activity of the compounds of formula 1 (R₁ = H, n=1):

While the foregoing specification teaches the principles of the present invention, with examples provided for the purpose of illustration, it will be understood that the practice of the invention encompasses all of the usual variations, adaptations and/or modifications as come within the scope of the following claims.

Claims

1. A compound of the formula:

\[
\begin{array}{c}
\text{R}_1 \text{ is independently selected from the group consisting of hydrogen; C}_1-8 \text{ alkyl; halogen; perfluoroC}_1-4 \text{ alkyl; hydroxy; C}_1-4 \text{ alkoxy; di (C}_1-4 \text{ alkoxy)amino; amino; amino(C}_1-8 \text{ alkyl)amino; nitro; C}_1-4 \text{ alkoxy carbonyl; and C}_1-4 \text{ alkylthio;}} \\
\text{R}_2 \text{ is selected from the group consisting of hydrogen; C}_1-8 \text{ alkyl; ary(C}_1-8 \text{ alkyl); heteroarylC}_1-4 \text{ alkyl; (R}_4\text{)}_2 \text{N(CH}_2\text{)}_2 \text{ wherein R}_4 \text{ is the same or different and are independently selected from H, C}_1-4 \text{ alkyl, aralkyl, aryl or substituted ary wherein the substituents are independently selected from C}_1-4 \text{ alkyl, C}_1-4 \text{ alkoxy, nitro, amino or halo; or R}_4 \text{ together with the nitrogen form a heterocyclic ring selected from piperidinyl, pyrrolidinyl, thiomorpholinyl, piperazinyl, imidazolyl, pyrazolyl, indolyl, indolyl, benzimidazolyl, pyrrolyl and indazolyl; R}_5\text{O (CH}_2\text{)}_p \text{ and R}_5\text{S (CH}_2\text{)}_p \text{ wherein R}_5 \text{ is selected from C}_1-4 \text{ alkyl, aralkyl, aryl or substituted ary wherein the substituents are independently selected from C}_1-4 \text{ alkyl, C}_1-4 \text{ alkoxy, nitro, amino or halo; and p is an integer from 1-5;}} \\
\text{R}_3 \text{ is selected from the group consisting of ary; substituted ary wherein the substituents are independently selected from C}_1-8 \text{ alkyl, halo, perfluoroC}_1-4 \text{ alkyl, hydroxy, C}_1-4 \text{ alkoxy, amino, nitro, di (C}_1-4 \text{ alkoxy)amino, C}_1-4 \text{ alkoxy carbonyl, aminoC}_2-6 \text{ alkoxy, C}_1-4 \text{ alkylaminoC}_2-6 \text{ alkoxy, di (C}_1-4 \text{ alkyl) aminoC}_2-6 \text{ alkoxy or C}_1-4 \text{ alkylthio; a heteroaryl ring selected from pyridyl; thiazolyl; thiophenyl; furyl; indolyl; benzothiophenyl; pyridinyl; pyrimidinyl; indolyl; indolyl; quinolyl; indazolyl; benzofuryl; triazinyl; pyrazinyl; isoquinolyl; isoxazolyl; thiazolyl; benzothiazolyl; triazolyl; and benzotriazolyl; a substituted heteroaryl ring wherein the substituents are independently selected from oxo, halo, perfluoroC}_1-4 \text{ alkyl, amino, nitro, C}_1-4 \text{ alkylthio, C}_1-4 \text{ alkoxy, C}_1-4 \text{ alkoxy amino, di (C}_4 \text{ alkoxy) amino, carboxy or C}_1-4 \text{ alkoxy carbonyl; and cycloalkyl having 3-8 carbon atoms; X is}} \\
\text{(a) a heterocyclic or carbocyclic ring selected from the group consisting of piperidinyl, pyrrolidinyl, morpholyl, thiomorpholinyl, piperazinyl, imidazolyl, pyrazolyl, pyridinyl, pyrimidinyl, pyridazinyl, thiazolyl, isothiazolyl, oxazolyl, isoxazolyl, oxazolyl, triazolyl, tetrazolyl, oxadiazolyl, dioxazaspirodecanyl, thiadiazolyl, purinyl, benzimidazolyl, benzothiophenyl, benzothiazolyl, indolyl; cyclo(C}_3-8\text{) alkyl, phenyl and naphthyl; or}} \\
\text{(b) a substituted heterocyclic, carbocyclic or aryl ring, selected from piperidinyl, pyrrolidinyl, morpholyl, thiomorpholinyl, piperazinyl, indolyl, pyrazolyl, triazolyl, indolyl, benzimidazolyl, pyrrolyl, indazolyl, pyrindyl, pyrazinyl, pyridazinyl, thiazolyl, isothiazolyl, oxazolyl, dioxazaspirodecanyl, thiadiazolyl,}
\end{array}
\]
purinyl, benzothienyl, benzothiazolyl, indolyl, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl,
cyclooctyl, phenyl and naphthyl; said heterocyclic, carbocyclic or aryl ring being substituted by C_{1-8}alkyl,
halogen, perfluoroC_{1-4}alkyl, hydroxy, amino, nitro, oxo, C_{1-4}alkoxy, C_{1-4}alkylamino, di(C_{1-4}alkyl)amino,
C_{1-4}alkoxy carbonyl, C_{1-4}alkoxyC_{1-4}alkyl carbonyl, aryl (optionally substituted by C_{1-4}alkyl, C_{1-4}alkoxy, nitro,
amino or halo), heteroaryl or C_{1-4}alkythio;
wherein "aryl" means phenyl or naphthyl, and "heteroaryl" means pyridyl, thiadiazolyl, thiophenyl, furyl, indolyl,
imidazolyl, benzothiazolyl, pyridazinyl, pyrimidinyl, indazolyl, indazolyl, benzofuryl, isoquinolinyl,
tri azinyl, pyrazinyl, isoazolyl, thiadiazolyl, benzothiazolyl, triazolyl, benzotriazolyl or oxazolyl; and
n is an integer from 1-3;
and pharmaceutically acceptable salts thereof.

2. A compound of claim 1 wherein R_1 is hydrogen or C_{1-8}alkyl, and R_2 is H, C_{1-8}alkyl, (R_4)_2N(CH_2)_p,
   R_5O(CH_2)_p, or R_5S(CH_2)_p.

3. The compound of claim 1 wherein R_1 is H; R_2 is H or C_{1-6}alkyl; R_3 is aryl, haloaryl, C_{1-4}alkoxyaryl or heteroaryl;
   and X is a heterocyclic ring.

4. The compound of claim 3 wherein X is a heterocyclic ring selected from imidazol-1-yl; morpholin-4-yl; alkoxyphenyl-
piperazin-4-yl; piperazin-1-yl; thiomorpholin-4-yl; piperazin-1-yl; 1,4-dioxo-8-azaspiro[4,5]decan-8-yl; 1-(2-methoxyacetyl)piperazin-4-yl and piperidinon-1-yl.

5. The compound of claim 1 wherein R_1 is H; R_2 is H or C_{1-6}alkyl; R_3 is aryl, haloaryl, C_{1-4}alkoxyaryl or heteroaryl;
   and X is a carbocyclic ring.

6. The compound of claim 5 wherein the carbocyclic ring is a phenyl ring.

7. The compound of claim 1 wherein
   R_2 is selected from the group consisting of hydrogen; C_{1-8}alkyl; phenyl(C_{1-4})alkyl; heteroaryl(C_{1-4})alkyl; (R_4)_2N
   (CH_2)_p wherein R_4 is the same or different and is independently selected from hydrogen, C_{1-4}alkyl, benzyl, phenyl
   or substituted phenyl wherein the substituent is C_{1-4}alkyl, C_{1-4}alkoxy, nitro, amino or halo; or R_4 together with the
   nitrogen form a heterocyclic ring; R_5O(CH_2)_p wherein R_5 is selected from C_{1-4}alkyl, benzyl, phenyl or substituted
   phenyl wherein the substituent is selected from C_{1-4}alkyl, C_{1-4}alkoxy, nitro, amino or halo; and R_5S(CH_2)_p wherein
   R_5 is selected from C_{1-4}alkyl, benzyl, phenyl or substituted phenyl wherein the substituent is selected from C_{1-4}alkyl,
   C_{1-4}alkoxy, nitro, amino or halo; and p is 1-5; and
   R_3 is independently selected from the group consisting of phenyl; substituted phenyl, wherein the substituents are
   independently selected from C_{1-8}alkyl, halo, perfluoroC_{1-4}alkyl, hydroxy, C_{1-4}alkoxy, amino, nitro, di(C_{1-4}alkyl)amino,
   C_{1-4}alkoxy carbonyl or C_{1-4}alkythio; a heteroaryl ring; a substituted heteroaryl ring; and cycloalkyl having 3-8 carbon
   atoms.

8. The compound of claim 1 wherein R_1 is H; R_2 is H or C_{1-6}alkyl; R_3 is selected from 2,6-difluorophenyl, 2-fluorophenyl,
   4-methoxyphenyl, 3-methoxyphenyl and thiazol-2-yl; and X is selected from imidazol-1-yl, morpholin-4-yl,
   1-(2-methoxyphenyl)piperazin-4-yl; piperazin-1-yl; thiomorpholin-4-yl; 1,4-dioxo-8-azaspiro[4,5]decan-8-yl; 1-(2-methoxyacetyl)piperazin-4-yl and 4-piperidinon-1-yl.

9. A pharmaceutical composition comprising a therapeutically effective amount of a compound of claim 1 and a phar-
   macetically acceptable carrier.

10. The use of a compound of claim 1 in the manufacture of a medicament for treating disorders of the central nervous
    system.

Patentansprüche

1. Verbindung der Formel:
Die Verbindung nach Anspruch 1, wobei $R_2$ ausgewählt ist aus der Gruppe bestehend aus Wasserstoff, $C_{1-6}$Alkyl, Aryl, $C_{1-6}$alkyl, Heteroaryl, $C_{1-6}$alkyl, (R_4)_2N(CH_2)_p, wobei $R_4$ gleich oder verschieden ist und unabhängig ausgewählt ist aus $H$, $C_{1-4}$Alkyl, Aryl, oder substituiertem Aryl, wobei die Substituenten unabhängig voneinander ausgewählt sind aus $C_{1-4}$Alkyl, $C_{1-4}$Alkoxy, Nitro, Amino oder Halo; oder $R_2$ zusammen mit dem Stickstoff ein Heterozyklus bildet, ausgewählt aus Piperidinyl, Pyrrolidinyl, Morpholinyl, Thiomorpholinyl, Piperazinyl, Imidazolyl, Pyrazolyl, Triazolyl, Indolyl; Indolinyl, Benzimidazolyl, Pyrrolyl und Indazolyl; $R_2$O(CH_2)_p und $R_2$S(CH_2)_p, wobei $R_2$ ausgewählt ist aus $C_{1-4}$Alkyl, Aryl, Aryl oder substituiertem Aryl, wobei die Substituenten unabhängig voneinander ausgewählt sind aus $C_{1-4}$Alkyl, $C_{1-4}$Alkoxy, Nitro, Amino oder Halo; und $p$ eine gerade Zahl von 1-5 ist; $R_3$ ausgewählt ist aus der Gruppe bestehend aus Aryl, substituiertem Aryl, wobei die Substituenten unabhängig voneinander ausgewählt sind aus $C_{1-6}$Alkyl, Halo, Perfluoro$C_{1-4}$alkyl, Hydroxy, $C_{1-4}$Alkoxy, Amino, Nitro, di$C_{1-4}$alkyl, $C_{1-6}$Alkoxy, $C_{1-6}$Alkoxy, $C_{1-6}$alkylamino, di$C_{1-6}$alkyl, eine heterozyklische Ring ausgewählt aus Pyrimidinyl, Thiadiazolyl, Pyridyl, Thiophenyl, Oxazolyl, Isothiazolyl, Oxazolidinyl, Triazolidinyl, Oxo, Halo, Perfluoro$C_{1-4}$alkyl, Amino, Nitro, $C_{1-4}$alkylthio, $C_{1-4}$alkyl, $C_{1-4}$alkylamino, di$C_{1-4}$alkyl, amino, Carboxy oder $C_{1-4}$alkoxy, und Cycloalkyl, das 3-8 Kohlenstoffatome aufweist; $X$ (a) ein heterozyklischer oder carbozyklischer Ring, ausgewählt aus der Gruppe bestehend aus Piperidinyl, Pyrrolindinyl, Morpholinyl, Piperazinyl, Imidazolyl, Pyrrolyl, Pyridinyl, Pyrimidinyl, Pyridazinyl, Thiazolyl, Isothiazolyl, Oxazolyl, Isoxazolyl, Oxazolinyl, Triazolyl, Tetrazolyl, Oxadiazolyl, Dioxazaaspiridendecanyl, Triadiazolyl, Purinyl, Benzimidazolyl, Benzo triphenylylphenyl, Benzothiazolyl, Indolyl; Cy clo$(C_{1-6})$alkyl, Phenyl und Naphthyl; oder (b) ein substitierter Heterozyklus, Carbozyklus oder ein Aryrtring, ausgewählt aus Piperidinyl, Pyrrolindinyl, Morpholinyl, Piperazinyl, Imidazolyl, Pyrrolyl, Pyridinyl, Pyrimidinyl, Pyridazinyl, Thiazolyl, Isothiazolyl, Oxazolyl, Isoxazolyl, Oxazolinyl, Triazolyl, Pyrazolyl, Thiadiazolyl, Pyridazinyl, Indolyl, Cyclo$(C_{1-6})$alkyl, Phenyl und Naphthyl; wobei der heterozyklische, carbozyklische oder Aryrtring durch $C_{1-4}$Alkyl, Halo gen, Perfluoro$C_{1-4}$alkyl, Hydroxy, Amino, Nitro, Oxyl, $C_{1-4}$alkylamino, di$C_{1-4}$alkyl, Amino, $C_{1-4}$alkoxy, $C_{1-4}$alkylcarbonyl, Aryl (gegebenenfalls substituiert durch $C_{1-4}$alkyl, $C_{1-4}$alkoxy, Nitro, Amino oder Halo), Heteroaryl oder $C_{1-4}$alkylthio substituiert; bedeutet, wobei "Aryl" Phenyl oder Naphthyl bedeutet und "Heteroaryl" Pyridyl, Thiadiazolyl, Thiophenyl, Furl, Indolyl, Pyrimidinyl, Pyridazinyl, Indolyl, Quinolinyl, Indazolyl, Benzofuryl, Isoquinolyl oder Oxazolyl bedeutet und $n$ eine gerade Zahl von 1-3 ist; und pharmazeutisch annehmbare Salze davon.

2. Die Verbindung nach Anspruch 1, wobei $R_1$ Wasserstoff oder $C_{1-8}$alkyl ist und $R_2$ H, $C_{1-4}$alkyl, (R_4)_2N(CH_2)_p, $R_5$O
3. Die Verbindung nach Anspruch 1, wobei R₁ H ist; R₂ H oder C₁₋₆ Alkyl ist; R₃ Aryl, Haloaryl, C₁₋₄ Alkoxyaryl oder Heteroaryl ist; und X ein heterozyklischer Ring ist.

4. Die Verbindung nach Anspruch 3, wobei X ein heterozyklischer Ring ist ausgewählt aus Imidazol-1-yl; Morpholin-4-yl; Alkoxyphenylpiperazin-4-yl; Piperidin-1-yl; Thiomorpholin-4-yl; 1,4-Dioxo-8-azaspiro[4,5]-decan-8-yl; 1-(2-Methoxyacetyl)piperazin-4-yl und Piperidinon-1-yl.

5. Die Verbindung nach Anspruch 1, wobei R₁ H ist; R₂ H oder C₁₋₆ Alkyl ist; R₃ Aryl, Haloaryl, C₁₋₄ Alkoxyaryl oder Heteroaryl ist und X ein carbozyklischer Ring ist.

6. Die Verbindung nach Anspruch 5, wobei der carbozyklische Ring ein Phenylring ist.

7. Die Verbindung nach Anspruch 1, wobei R₂ ausgewählt ist aus der Gruppe bestehend aus Wasserstoff; C₁₋₆ Alkyl; Phenyl(C₁₋₄)alkyl; Heteroaryl(C₁₋₄)alkyl; (R₄)₂N(CH₂)ₖ, wobei R₄ gleich oder verschieden ist und unabhängig ausgewählt ist aus Wasserstoff, C₁₋₄ Alkyl, Benzyl, Phenyl oder substituiertem Phenyl, wobei der Substituent C₁₋₄ Alkoxy, Nitro, Amino oder Halo ist; oder R₄ zusammen mit dem Stickstoff einen heterozyklischen Ring bildet; R₅O(CH₂)ₖ, wobei R₅ ausgewählt ist aus C₁₋₄ Alkyl, Benzyl, Phenyl oder substituiertem Phenyl, wobei der Substituent ausgewählt ist aus C₁₋₄ Alkyl, C₁₋₄ Alkoxy, Nitro, Amino oder Halo; und R₅S(CH₂)ₖ, wobei R₅ ausgewählt ist aus C₁₋₄ Alkyl, Benzyl, Phenyl oder substituiertem Phenyl, wobei der Substituent ausgewählt ist aus C₁₋₄ Alkyl, C₁₋₄ Alkoxy, Nitro, Amino oder Halo; und p 1-5 ist; und R₄ unabhängig ausgewähl ist aus der Gruppe bestehend aus Phenyl; substituiertem Phenyl, wobei die Substituenten unabhängig ausgewählt sind aus C₁₋₄ Alkyl, Halo, PerfluorC₁₋₄ alkyl, Hydroxy, , C₁₋₄ Alkoxy, Amino, Nitro, dic(C₁₋₄ Alkyl) amino, C₁₋₄ Alkoxy carbonyl oder C₁₋₄ Alkylthio; einem Heteroarylring; einem substituierten Heteroarylring; und Cycloalkyl, das 3-8 Kohlenstoffatome aufweist.

8. Die Verbindungen nach Anspruch 1, wobei R₁ H ist; R₂ H oder C₁₋₆ Alkyl ist; R₃ ausgewählt ist aus 2,6-Difluorphenyl, 2-Fluorphenyl, 4-Methoxyphenyl und Thiazol-2-y1; und X ausgewählt ist aus Imidazol-1-yl, Mor- pholin-4-yl, 1-(2-Methoxyphenyl)-piperazin-4-yl; Piperidin-1-yl; Thiomorpholin-4-yl; 1,4-Dioxo-8-azaspiro[4,5]-decan-8-yl; 1-(2-Methoxyacetyl)-piperazin-4-yl und 4-Piperidinon-1-yl.

9. Eine pharmazeutische Zusammensetzung umfassend eine therapeutisch wirksame Menge einer Verbindung nach Anspruch 1 und einem pharmazeutisch annehmbaren Träger.

10. Verwendung einer Verbindung nach Anspruch 1 zur Herstellung eines Medikaments für die Behandlung einer Erkrankung des zentralen Nervensystems.

Revendications

1. Composé de la formule:

où:

R₁ est indépendamment sélectionné dans le groupe consistant en hydrogène; alkyleC₁₋₈; halogène; perfluoralkyleC₁₋₄; hydroxy, alcoxyC₁₋₄, di(alkylC₁₋₄) amino; amino; amino (alkylC₁₋₄) amino; nitro;
alcoxy carbonyl C_{1-4}; et alkylthio C_{1-4};
R_5 est sélectionné dans le groupe consistant en hydrogène, alkyle C_{1-6}; aryalkyle C_{1-6}; hétéroaryalkyle C_{1-4};
(R_2)_2N(CH_2)p où R_4 est identique ou différent et ils sont indépendamment sélectionnés parmi H, alkyle C_{1-4};
aralkyle, aryle ou aryle substitué où les substituants sont indépendamment sélectionnés parmi alkyle C_{1-4},
alcoxy C_{1-4}, nitro, amino ou halo; ou bien R_4, avec l’azote, forment un cycle hétérocyclique sélectionné parmi
pipéridinyle, pyrrolidinyle, morpholinylen, thiomorpholinylen, pipérazinylen, imidazolyl, pyrazolyl, triazolyl, indolyl,
ilindolyl, benzimidazolyl, pyrrolylen et indazolyl; R_5O(CH_2)p et R_5S(CH_2)p où R_5 est sélectionné parmi
alkyle C_{1-4}, aralkyle, aryle ou aryle substitué où les substituants sont indépendamment sélectionnés parmi
alkyle C_{1-4}, alcoxy C_{1-4}, nitro, amino ou halo; et p est un entier de 1-5;
R_5 est sélectionné dans le groupe consistant en aryle; aryle substitué où les substituants sont indépendamment
sélectionnés parmi alkyle C_{1-6}, halo, perfluoroalkyle C_{1-4}, hydroxy, alkoxycarbonyl C_{1-4}, amino, nitro, di(alkyle C_{1-4})amino,
alcoxy carbonyl C_{1-4}, aminalcoxy C_{2-6}, alkyamine C_{1-6} alcoxy C_{2-6}, di(alkyle C_{1-6})aminalcoxy C_{2-6} ou
alkythio C_{1-4}; un cycle hétéroaryle sélectionné parmi pyridyle, thiazoyl, thiophénylen, furyl; indolyl; benzothiophénylen,
pyridazinylen, pyrimidinylen, imidazolyl, indolinylen, quinolinylen; indazolyl; benzofurylen; triazolyl; pyrazinylen;
isoquinolinylen; isoxazolyl; thiadiazolyl; benzothiazolyl; triazolyl; et benzotriazolyl; un cycle hétéroaryle
sélectionné où les substituants sont indépendamment sélectionnés parmi oxo, halo, perfluoroalke C_{1-4}, et
cycloalkyle ayant 3-8 atomes de carbone;
X est
(a) un cycle hétérocyclique ou carbocyclique sélectionné dans le groupe consistant en pipéridinyle, pyrrolidinyle,
morpholinylen, thiomorpholinylen, pipérazinylen, imidazolyl, pyrazolyl, pyrazinylen, pyrimidinylen, pyridazinylen,
pyridazinylen, thiazolyl, isothiazolyl, oxazolyl, isoxazolyl, oxazolinylen, triazolyl, tétrazolyl, oxadiazolyl,
dioxoazaspirodecanylen, thiadiazolyl, purinylen, benzimidazolyl, benzothiophénylen, benzothiazolyl, indolyl;
cyclo(alkyle C_{3-8}), phénylen et naphthyl; ou
(b) un cycle hétérocyclique, carbocyclique ou aryle substitué, sélectionné parmi pipéridinyle, pyrrolidinyle,
morpholinylen, thiomorpholinylen, pipérazinylen, indolinylen, benzimidazolyl, pyrazolyl, indolinylen, pyrazinylen,
pyrazinyl, pyrimidinylen, pyridazinylen, pyridazinylen, isothiazolyl, oxazolyl, dioxoazaspirodecanylen, thiadizolyl,
purinylen, benzothiophénylen, benzothiazolyl, indolinylen, cyclopropylen, cyclobutyl, cyclopentyl, cyclo-
hexylen, cycloheptylen, cyclooctylen, phénylen et naphthyl; ledit cycle hétérocyclique, carbocyclique, ou aryle
étant substitué par alkyle C_{1-4}, haloxylen, perfluoroalke C_{1-4}, hydroxy, amino, nitro, oxo, alkoxycarbonyl C_{1-4},
alkyamine C_{1-6}, di(alkyle C_{1-4})amino, alcoxy carbonyl C_{1-4}, alcocox C_{1-4}, alkylcarbo C_{1-4}, aryl(facultative-
ment substitué par alkyle C_{1-4}, alcocys C_{1-4}, nitro, amino ou halo), hétéroaryle ou alkylthio C_{1-4};
où "aryl" signifie phényle ou naphthyl, et "hétéroaryl" signifie pyridyle, thiazolyl, thiophénylen, furyl, indolyl,
imidazolyl, benzothiophénylen, pyridazinylen, pyrimidinylen, indolinylen, quinolinylen, indazolyl, benzofurylen,
isooquinolénylen, triazinylen, pyrazinyl, isoxazolyl, thiadiazolyl, benzothiazolyl, triazolyl, benzotriazolyl ou oxazolyl; et
n est un entier de 1-3;
les sels pharmaceutiquement acceptables.

2. Composé de la revendication 1 où R_7 est hydrogène ou alkyle C_{1-8}; et R_2 est H, alkyle C_{1-6}; (R_4)_2N(CH_2)_p, R_5O
(CH_2)_p, ou R_5S(CH_2)_p.

3. Composé de la revendication 1 où R_7 est H; R_2 est H ou alkyle C_{1-6}; R_3 est aryle, haloarylen, alcoxy arylen C_{1-4}
hétéroaryle; et X est un cycle hétérocyclique.

4. Composé de la revendication 3 où X est un cycle hétérocyclique sélectionné parmi imidazol-1-ylen; morpholyn-4-ylen;
alcoxyphénylpipérazin-4-ylen; pipéridin-1-ylen; thiomorpholyn-4-ylen; pipérazin-1-ylen; 1,4-dioxo-8-azaspiro[4,5]décan-
8-ylen; 1-(2-méthoxyacétyl)pipéra zin-4-ylen et pipéridinon-1-ylen.

5. Composé de la revendication 1 où R_7 est H; R_2 est H ou alkyle C_{1-6}; R_3 est aryle, haloarylen, alcoxy arylen C_{1-4}
hétéroaryle; et X est un cycle carbocyclique.

6. Composé de la revendication 5 où le cycle carbocyclique est un cycle phénylen.

7. Composé de la revendication 1 où
R_2 est sélectionné dans le groupe consistant en hydrogène; alkyle C_{1-6}; phényl(alkyle C_{1-4}); hétéroaryl(alkyle C_{1-4});
(R₄)₂N(CH₂)₉ où R₄ est identique ou différent et est indépendamment sélectionné parmi hydrogène, alkyleC₁-₄, benzyle, phényle ou phényle substitué où le substituant est alkyleC₁-₄, alcoxyC₁-₄, nitro, amino ou halo; ou bien R₄ avec l’azote forment un cycle hétérocyclique; R₅O(CH₂)ₙ où R₅ est sélectionné parmi alkyleC₁-₄, benzyle, phényle ou phényle substitué où le substituant est sélectionné parmi alkyle C₁-₄, alcoxyC₁-₄, nitro, amino ou halo; et R₅S(CH₂)ₙ où R₅ est sélectionné parmi alkyleC₁-₄, benzyle, phényle ou phényle substitué où le substituant est sélectionné parmi alkyle Ci-₄, alcoxyC₁-₄, nitro, amino ou halo; et p est 1-5; et R₉ est indépendamment sélectionné dans le groupe consistant en phényle; phényle substitué, où les substituants sont indépendamment sélectionnés parmi alkyleC₁-₈, halo, perfluoroalkyleC₁-₄, hydroxy, alcoxyC₁-₄, amino, nitro, di(alkyleC₁-₄)amino, alcoxyacétylC₁-₄, alkylthioC₁-₄; un cycle hétéroaryle; un cycle hétéroaryle substitué; et cycloalkyle ayant 3-8 atomes de carbone.

8. Composé de la revendication 1 où R₁ est H; R₂ est H ou alkylC₁-₆; R₃ est sélectionné parmi 2,6-difluorophényle, 2-fluorophényle, 4-méthoxyphényle, 3-méthoxyphényle et thiazol-2-yile; et X est sélectionné parmi imidazol-1-yle, morpholin-4-yle, 1-(2-méthoxyphényl)pipérazin-4-yile; pipérizin-1-yle; thiomorpholin-4-yle; 1,4-dioxo-8-azaspiro (4,5)décan-8-yile; 1-(2-méthoxyacétyl)pipérazin-4-yile et 4-pipéridinon-1-yle.

9. Composition pharmaceutique comprenant une quantité thérapeutiquement efficace d’un composé de la revendication 1 et un support pharmaceutiquement acceptable.

10. Utilisation d’un composé de la revendication 1 dans la fabrication d’un médicament pour traiter des troubles du système nerveux central.
