The present invention relates to a novel class of kinase inhibitors, including pharmaceutically acceptable salts thereof, which are useful for modulating protein kinase activity for modulating cellular activities such as signal transduction, proliferation, and cytokine secretion. More specifically, the invention provides compounds which inhibit, regulate and/or modulate kinase activity, in particular mTOR activity, and signal transduction pathways relating to cellular activities as mentioned above. Furthermore, the present invention relates to pharmaceutical compositions comprising said compounds, e.g. for the treatment of diseases such as immunological, inflammatory, autoimmune, allergic disorders, or proliferative diseases such as cancer.

Kinases catalyse the phosphorylation of proteins, lipids, sugars, nucleosides and other cellular metabolites and play key roles in all aspects of eukaryotic cell physiology. Especially, protein kinases and lipid kinases participate in the signaling events which control the activation, growth, differentiation and survival of cells in response to extracellular mediators or stimuli such as growth factors, cytokines or chemokines. In general, protein kinases are classified in two groups, those that preferentially phosphorylate tyrosine residues and those that preferentially phosphorylate serine and/or threonine residues.

Inappropriately high protein kinase activity is involved in many diseases including cancer, metabolic diseases and autoimmune/inflammatory disorders. This can be caused either directly or indirectly by the failure of control mechanisms due to mutation, overexpression or inappropriate activation of the enzyme. In all of these instances, selective inhibition of the kinase is expected to have a beneficial effect.

mTOR (“mammalian target of rapamycin”, also known as FRAP or RAFT1) has become a recent focus of drug discovery efforts (Tsang et al., 2007, Drug Discovery Today 12, 112-124). It was discovered that the mTOR protein is the drug target for the immunosuppressive effect of rapamycin, a drug that is used to prevent transplant rejection. Rapamycin works through a gain-of-function mechanism by binding to the intracellular protein "FK-506-binding protein of 12 kDa" (FKBP12) to generate a drug-receptor complex that then binds to and inhibits mTOR. Thus, rapamycin induces the formation of the ternary complex consisting of rapamycin and the two proteins FKBP12 and mTOR.

mTOR is a large kinase of 289 kDa which occurs in all eukaryotic organisms sequenced so far (Schmelzle and Hall, 2000, Cell 103, 253-262). The sequence of the carboxy-terminal "phosphatidylinositol 3-kinase (PI3K)-related kinase" (PIKK) domain is highly conserved between species and exhibits serine and threonine kinase activity but no detectable lipid kinase activity. The intact PIKK domain is required for all known functions of mTOR. The FKBP12-rapamycin-binding (FRB) domain is located close to the PIKK domain and forms a hydrophobic pocket that binds to the rapamycin bound to FKBP12. The FRB domain does not appear to inhibit the enzymatic activity of the kinase domain directly. One explanation is that FKBP12-rapamycin prevents the interaction of mTOR with its substrates due to steric hindrance. The N-terminus of mTOR consists of approximately 20 tandem repeats of 37 to 43 amino acids termed HEAT repeats. The HEAT repeats interact with protein binding partners such as Raptor.

mTOR can form at least two distinct protein complexes, mTORC1 and mTORC2. In the mTORC1 protein complex mTOR interacts with the proteins Raptor and mLST8/GβL and regulates cell growth by phosphorylating effectors such as p70S6K and 4E-BP1 to promote mRNA translation and protein synthesis. The mTORC1 complex is responsible for sensing nutrient signals (for example the availability of amino acids) in conjunction with insulin signaling. The activity of mTOR in mTORC1 can be inhibited by rapamycin.

The second protein complex, mTORC2, consists of the proteins mTOR, Rictor, mLST8/GβL and Sin1 and is involved in the organization of actin. The mTORC2 was originally described as rapamycin insensitive. A recent publication demonstrated that rapamycin affects the function of mTORC2 after prolonged treatment through an indirect mechanism by interfering with the assembly of the mTORC2 protein complex (Sarbassov et al., 2006, Molecular Cell 22, 159-168).

The biological function of mTOR is that of a central regulator of various extracellular and intracellular signals, including growth factors, nutrients, energy and stress. Growth factor and hormone (e.g. insulin) induced mTOR activation is mediated by PI3 kinases, Akt, and the tuberous sclerosis protein complex (TSC). For example, mTOR acts as a central regulator of cell proliferation, angiogenesis, and cell metabolism (Tsang et al., 2007, Drug Discovery Today 12, 112-124). In addition to its immunosuppressive effects rapamycin (Sirolimus) is a potent inhibitor of the proliferation of vascular smooth muscle cells and was approved by the FDA as an anti-restenosis drug used in coronary stents. In addition, it was observed that rapamycin displays anti-tumour activity in several in vitro and animal models (Faivre et al., 2006. Nat. Rev. Drug. Discov. 5(8):671-688).

Because of the therapeutic potential of rapamycin several pharmaceutical companies started to develop rapamycin analogs to improve the pharmacokinetic properties of the molecule (Tsang et al., 2007, Drug Discovery Today 12, 112-124). For example, CCI779 (temsirolimus) represents a more water-soluble ester derivative of rapamycin for intravenous and oral formulation. CCI779 has antitumor activity either alone or in combination with cytotoxic agents in cell lines. RAD001 (everolimus) is a hydroxyethyl ether derivative of rapamycin that is developed for oral administration. AP23573 (deferolimus) is developed for either oral or intravenous administration.

In general, the rapamycin derivatives act through the same molecular mechanism, the induction of the ternary complex mTOR interacts with the proteins Raptor and mLST8/GβL and regulates cell growth by phosphorylating effectors such as p70S6K and 4E-BP1 to promote mRNA translation and protein synthesis. The mTORC1 complex is responsible for sensing nutrient signals (for example the availability of amino acids) in conjunction with insulin signaling. The activity of mTOR in mTORC1 can be inhibited by rapamycin.
rapamycin-FKBP12-mTOR complex. It is conceivable that the function of mTOR could be equally or even more effectively inhibited by inhibitors of the kinase function. For example, this could be achieved by identifying compounds that interact with the ATP-binding pocket of the mTOR kinase domain. For example Torin1 is a potent and selective ATP-competitive mTOR inhibitor that directly binds to both mTOR complexes and impairs cell growth and proliferation more efficiently than rapamycin (Thoreen et al., 2009. J Biol. Chem. 284(12):8023-32; Feldman et al., 2009. PLOS Biology 7(2):e38).

Several mTOR inhibitors have been reported in the literature which may be useful in the medical field, for example as anticancer agents (Faireve et al., 2006. Nat. Rev. Drug. Discov. 5(8):671-688). In WO-A 2008/116129 imidazolopyrimidine analogs are described as mixed mTOR and PI3K kinase inhibitors. Pyrazolopyrimidine analogs are described as mixed mTOR and PI3K kinase inhibitors in WO-A 2008/115974. Further pyrimidine derivatives as mTOR kinase and/or PI3K enzyme active compounds are disclosed in WO-A 2008/023159, WO-A 2009/007749, WO-A 2009/007750, WO-A 2009/007751, WO-A 2010/103094, WO-A 2010/120994 and WO-A 2010/120998.

Furthermore mTOR inhibitors are described in international patent application with application number PCT/EP2012/055953 and WO 2011/107585 A1.

It is expected that a selective mTOR inhibitor that inhibits mTOR with greater potency than other kinases may have advantageous therapeutic properties because inhibition of other kinases may cause unwanted side effects (Richard et al., 2011. Current Opinion Drug Discovery and Development 13(4):428-440). Especially selectivity versus members of the phosphatidylinositol 3 kinase (PI3K) family (for example PI3Kα, PI3Kβ, PI3Kγ, and PI3Kδ) and PI3K related kinases (for example DMA-PK, ATM and ATR) may be important.

Even though mTOR inhibitors are known in the art there is a need for providing additional mTOR inhibitors having at least partially more effective pharmaceutically relevant properties, like activity, selectivity, and ADME properties.

Accordingly, the present invention provides compounds of formula (I)
R₄, R₄a, R₄b are independently selected from the group consisting of H; and C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more halogen, which are the same or different;

T⁰ is phenyl; or 5 to 6 membered aromatic heterocycle, wherein T⁰ is substituted with N(R⁵a)C(O)N(R⁵bR⁵) or N(R⁵a)C(O)OR⁶ and optionally further substituted with one or more R⁶, which are the same or different;

R⁶ is halogen; CN; C(O)OR⁸; OR⁸; C(O)R⁸; C(O)N(R⁸R⁸a); S(O)₂N(R⁸R⁸a); S(O)₂N(R⁸R⁸b); S(O)₂R⁸; S(O)R⁸; N(R⁸)S(O)₂N(R⁸R⁸b); N(R⁸)S(O)N(R⁸R⁸b); SR⁸; N(R⁸)R⁸; NO₂; OC(O)R⁸; N(R⁸)C(O)R⁸a; N(R⁸)S(O)₂R⁸a; N(R⁸)S(O)R⁸a; N(R⁸)C(O)N(R⁸R⁸a); N(R⁸)C(O)OR⁸a; OC(O)N(R⁸R⁸a); or T²;

R⁸, R₉a, R₉b are independently selected from the group consisting of H; C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more halogen, which are the same or different;

R⁵ is H; T²; and C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more R⁶, which are the same or different;

R⁶ is halogen; CN; C(O)OR⁸; OR⁸; C(O)R⁸; C(O)N(R⁸R⁸a); S(O)₂N(R⁸R⁸a); S(O)₂N(R⁸R⁸b); S(O)₂R⁸; S(O)R⁸; N(R⁸)S(O)₂N(R⁸R⁸b); N(R⁸)S(O)N(R⁸R⁸b); SR⁸; N(R⁸)R⁸; NO₂; OC(O)R⁸; N(R⁸)C(O)R⁸a; N(R⁸)S(O)₂R⁸a; N(R⁸)S(O)R⁸a; N(R⁸)C(O)N(R⁸R⁸a); N(R⁸)C(O)OR⁸a; OC(O)N(R⁸R⁸a); or T²;

R⁸, R₉a, R₉b are independently selected from the group consisting of H; C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more halogen, which are the same or different;

Optionally R⁵, R₉b are joined to form together with the nitrogen atom to which they are attached an at least the nitrogen atom as ring heteroatom containing 4 to 7 membered heterocyclic ring; or 8 to 11 membered heterobicyclic ring, wherein the 4 to 7 membered heterocyclic ring; and the 8 to 11 membered heterobicyclic ring are optionally substituted with one or more R¹⁰, which are the same or different;

T² is C₃₋₇ cycloalkyl; 4 to 7 membered heterocyclic; 8 to 11 membered heterobicyclic; phenyl; naphthyl; indenyl; or indanyl, wherein T² is optionally substituted with one or more R¹⁰, which are the same or different;

R¹⁰ is halogen; CN; C(O)OR¹¹; OR¹¹; oxo (=O), where the ring is at least partially saturated; C(O)R¹¹; C(O)N(R¹¹R¹¹a); S(O)₂N(R¹¹R¹¹b); S(O)₂R¹¹; S(O)R¹¹; N(R¹¹)S(O)₂N(R¹¹aR¹¹b); N(R¹¹)S(O)N(R¹¹aR¹¹b); SR¹¹; N(R¹¹)R¹¹; NO₂; OC(O)R¹¹; N(R¹¹)C(O)R¹¹a; N(R¹¹)S(O)₂R¹¹a; N(R¹¹)S(O)R¹¹a; N(R¹¹)C(O)N(R¹¹aR¹¹b); N(R¹¹)C(O)OR¹¹a; or C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more R¹², which are the same or different;

R¹¹, R¹¹a, R¹¹b are independently selected from the group consisting of H; C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more halogen, which are the same or different;

R¹² is halogen; CN; C(O)OR¹³; OR¹³; C(O)R¹³; C(O)N(R¹³R¹³a); S(O)₂N(R¹³R¹³a); S(O)₂N(R¹³R¹³b); S(O)₂R¹³; S(O)R¹³; N(R¹³)S(O)₂N(R¹³aR¹³b); N(R¹³)S(O)N(R¹³aR¹³b); SR¹³; N(R¹³)R¹³; NO₂; OC(O)R¹³; N(R¹³)C(O)R¹³a; N(R¹³)S(O)₂R¹³a; N(R¹³)S(O)R¹³a; N(R¹³)C(O)N(R¹³aR¹³b); N(R¹³)C(O)OR¹³a; or C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more R¹², which are the same or different;

R¹³, R¹³a, R¹³b are independently selected from the group consisting of H; and C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more halogen, which are the same or different;

T¹ is phenyl; or 5 to 6 membered aromatic heterocycle, wherein T¹ is substituted with S(O)N(R¹⁴aR¹⁴b); S(O)₂N(R¹⁴aR¹⁴b); S(O)R¹⁴; S(O)₂R¹⁴ and optionally further substituted with one or more R¹⁵, which are the same or different;

R¹⁵ is halogen; CN; C(O)OR¹⁶; OR¹⁶; C(O)R¹⁶; C(O)N(R¹⁶R¹⁶a); S(O)₂N(R¹⁶R¹⁶a); S(O)N(R¹⁶R¹⁶b); S(O)R¹⁶; N(R¹⁶)S(O)₂N(R¹⁶aR¹⁶b); S(O)N(R¹⁶R¹⁶a); N(R¹⁶)S(O)₂N(R¹⁶aR¹⁶b); S(O)N(R¹⁶R¹⁶b); NO₂; OC(O)R¹⁶ N(R¹⁶)C(O)R¹⁶a; N(R¹⁶)S(O)₂R¹⁶a; N(R¹⁶)S(O)R¹⁶a; OC(O)N(R¹⁶R¹⁶a); or C₁₋₆ alkyl, wherein C₁₋₆ alkyl is optionally substituted with one or more halogen, which are the same or different;

R¹⁴a, R¹⁶, R¹⁶a, R¹⁶b are independently selected from the group consisting of H; C₁₋₆ alkyl, wherein C₁₋₆ alkyl is
optionally substituted with one or more halogen, which are the same or different;

\[ R^{14} \text{ is } C_{1-6} \text{ alkyl, which is optionally substituted with one or more halogen, which are the same or different; or an unsubstituted } 4 \text{ to } 7 \text{ membered heterocyclyl ring.} \]

**[0018]** In case a variable or substituent can be selected from a group of different variants and such variable or substituent occurs more than once the respective variants can be the same or different.

**[0019]** Within the meaning of the present invention the terms are used as follows:

The term "optionally substituted" means unsubstituted or substituted. Generally "one or more substituents" means one, two or three, preferably one or two and more preferably one substituents. Generally these substituents can be the same or different.

"Alkyl" means a straight-chain or branched carbon chain. Each hydrogen of an alkyl carbon may be replaced by a substituent as further specified herein.

"C\textsubscript{1-4} alkyl" means an alkyl chain having 1 - 4 carbon atoms, e.g. if present at the end of a molecule: methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl tert-butyl, or e.g. -CH\textsubscript{2}-, -CH\textsubscript{2}-CH\textsubscript{2}-, -CH(\textsubscript{2}H\textsubscript{3})-, -CH(CH\textsubscript{2}H\textsubscript{3})-, -CH(CH\textsubscript{3})\textsubscript{2}-, when two moieties of a molecule are linked by the alkyl group. Each hydrogen of a C\textsubscript{1-4} alkyl carbon may be replaced by a substituent as further specified herein.

"C\textsubscript{1-6} alkyl" means an alkyl chain having 1 - 6 carbon atoms, e.g. if present at the end of a molecule: C\textsubscript{1-4} alkyl, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl tert-butyl, n-pentyl, n-hexyl, or e.g. -CH\textsubscript{2}-, -CH\textsubscript{2}-CH\textsubscript{2}-, -CH(C\textsubscript{2}H\textsubscript{5})-, -C(CH\textsubscript{3})\textsubscript{2}-, when two moieties of a molecule are linked by the alkyl group. Each hydrogen of a C\textsubscript{1-6} alkyl carbon may be replaced by a substituent as further specified herein.

"C\textsubscript{3-7cycloalkyl}" or "C\textsubscript{3-7} cycloalkyl ring" means a cyclic alkyl chain having 3 - 7 carbon atoms, e.g. cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cyclohexenyl, cycloheptyl. Each hydrogen of a cycloalkyl carbon may be replaced by a substituent as further specified herein.

"Halogen" means fluoro, chloro, bromo or iodo. It is generally preferred that halogen is fluoro or chloro.

"4 to 7 membered heterocyclyl" or "4 to 7 membered heterocycle" means a ring with 4, 5, 6 or 7 ring atoms that may contain up to the maximum number of double bonds (aromatic or non-aromatic ring which is fully, partially or unsaturated) wherein at least one ring atom up to 4 ring atoms are replaced by a heteroatom selected from the group consisting of sulfur (including -S(O)-, -S(O)\textsubscript{2}-), oxygen and nitrogen (including =N(O)-) and wherein the ring is linked to the rest of the molecule via a carbon or nitrogen atom. Examples for a 4 to 7 membered heterocycles are azetidine, oxetane, thietane, furan, thiophene, pyrrole, pyrrrole, imidazole, imidazoline, pyrazole, pyrazoline, oxazole, oxazoline, isoxazole, isoxazoline, thiazole, thiazole, isothiazole, isothiazoline, thiadiazole, thiadiazoline, tetrahydrofuran, tetrahydrothiophene, pyrrolidine, imidazolidine, pyrazolidine, oxazolidine, isoxazolidine, thiazolidine, isothiazolidine, thiadiazolidine, sulfolane, pyran, dihydropyran, tetrahydropyran, imidazolidine, pyridine, pyridazine, pyrazine, pyrimidine, pyrazoline, morpholine, tetrazole, triazole, triazoline, tetrazolidine, diazepane, azepine or homopiperazine. The term "5 to 6 membered heterocyclyl" or "5 to 6 membered heterocycle" is defined accordingly.

"8 to 11 membered heterobicyclyl" or "8 to 11 membered heterobicycle" means a heterocyclic system of two rings with 8 to 11 ring atoms that may contain up to the maximum number of double bonds (aromatic or non-aromatic ring which is fully, partially or unsaturated) wherein at least one ring atom up to 6 ring atoms are replaced by a heteroatom selected from the group consisting of sulfur (including -S(O)-, -S(O)\textsubscript{2}-), oxygen and nitrogen (including =N(O)-) and wherein the ring is linked to the rest of the molecule via a carbon or nitrogen atom. Examples for a 8 to 11 membered heterobicycle are indole, indoline, benzofuran, benzothiophene, benzoaxazole, benzisoxazole, benzothiazole, benzisothiazole, benzimidazole, benzimidazoline, quinoline, quinazolinone, dihydroquinazolinone, quinoline, dihydroquinoline, tetrahydroquinoline, decahydroquinoline, isoquinoline, decachydroisoquinoline, tetrahydroisoquinoline, dihydroisoquinoline, benzazepine, purine or pteridine. The term 8 to 11 membered heterobicycle also includes spiro structures of two rings like 1,4-dioxo-8-azaspiro[4.5]decane or bridged heterocycles like 8-aza-bicyclo[3.2.1]octane.

"5 to 6 membered aromatic heterocyclyl" or "5 to 6 membered aromatic heterocycle" means a heterocycle derived from cyclopentadienyl or benzene, where at least one carbon atom is replaced by a heteroatom selected from the...
group consisting of sulfur (including -S(O)-, -S(O)₂-), oxygen and nitrogen (including =N(O)-). Examples for such heterocycles are furan, thiophene, pyrrole, imidazole, pyrazole, oxazole, isoxazole, thiazole, isothiazole, thiadiazole, pyranium, pyridine, pyrimidine, pyridazine, triazole, tetrazole.

[0020] Preferred compounds of formula (I) are those compounds in which one or more of the residues contained therein have the meanings given below, with all combinations of preferred substituent definitions being a subject of the present invention. With respect to all preferred compounds of the formula (I) the present invention also includes all tautomeric and stereoisomeric forms and mixtures thereof in all ratios, and their pharmaceutically acceptable salts.

[0021] In preferred embodiments of the present invention, the substituents mentioned below independently have the following meaning. Hence, one or more of these substituents can have the preferred or more preferred meanings given below.

[0022] Preferably, m is 1.

[0023] Preferably, n is 1 or 2.

[0024] Preferably, R1 is unsubstituted C₁₋₆ alkyl (more preferably methyl or ethyl, even more preferred methyl); or C₁₋₆ alkyl substituted with one R³.

[0025] Preferably, two R¹ are joined to form together with the ring to which they are attached an 8-oxa-3-azabicyclo[3.2.1]octan-3-yl or an 3-oxa-8-azabicyclo[3.2.1]octan-8-yl ring.

[0026] Preferably, T₀ is phenyl, wherein T₀ is substituted with N(R₅a)C(O)N(R₅bR₅) or N(R₅a)C(O)OR₅ and optionally further substituted with one or more R₆, which are the same or different.

[0027] Preferably, T₀ is substituted with N(R₅a)C(O)N(R₅bR₅) and optionally further substituted with one or more R₆, which are the same or different.

[0028] Preferably, T₀ is not further substituted with one or more R₆.

[0029] Preferably, T₀ is substituted with N(R₅a)C(O)N(R₅bR₅) and optionally further substituted with one or more R₆, which are the same or different.

[0030] Preferably, R₅ is T₂, wherein T₂ is optionally substituted with one or more R¹₀, which are the same or different and wherein T₂ is phenyl; pyridyl; cyclopentyl; cyclohexyl; oxetanyl; or tetrahydrofuranyl; more preferably, cyclopropyl. More preferably, T₂ is unsubstituted.

[0031] Preferably, R₅ is unsubstituted C₁₋₆ alkyl.

[0032] Preferably, R₅ is substituted with one or more R₈, which are the same or different and selected from the group consisting of F; OR₉; and N(R₉R₉a).

[0033] Preferably, T₁ is substituted with S(O)₂R₁₄ and optionally further substituted with one or more R₁₅, which are the same or different.

[0034] Preferably, T₁ is not further substituted with one or more R₁₅ or T₁ is further substituted with one R₁₅ Preferably, R₁₅ is halogen, more preferably F.

[0035] Preferably, T₁ is substituted with S(O)₂R₁₄ and optionally further substituted with one or more R₁₅, which are the same or different.

[0036] Preferably, R₁₄ is methyl; or ethyl; more preferably, methyl.

[0037] Preferably, in formula (I) T₀ and T₁ are selected to give formula (Ia)

\[
(Ia),
\]

wherein X is CH or N, o is 0 or 1 and n, m, R¹, R₆, R₁₄, R₁₅ have the meaning as indicated above.

[0038] Even more preferred is formula (Ib)
wherein X is CH or N, o is 0 or 1 and m, R¹, R⁵, R¹⁴, R¹⁵ have the meaning as indicated above.

[0039] Compounds of formula (I) in which some or all of the above-mentioned groups have the preferred meanings are also an object of the present invention.

[0040] Further preferred compounds of the present invention are selected from the group consisting of

(S)-1-cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(2-hydroxyethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-cyclopropyl-3-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(4-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(2,2-difluoroethyl)-3-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(oxetan-3-yl)urea;
(S)-1-ethyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(4-(8-oxa-3-azabicyclo[3.2.1]octan-3-yl)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-cyclopropylurea;
(S)-1-cyclopropyl-3-(4-(4-(2-(methylsulfonyl)phenyl)-6-morpholino-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(2,2-difluorocyclopropyl)-3-(4-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(hydroxymethyl)phenyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
Where tautomerism, like e.g. keto-enol tautomerism, of compounds of general formula (I) may occur, the individual forms, like e.g. the keto and enol form, are comprised separately and together as mixtures in any ratio. The same applies for stereoisomers, like e.g. enantiomers, cis/trans isomers, conformers and the like.

Especially, compounds of formula (I), wherein the morpholino ring is substituted with one R¹ in 3-position are encompassed by the present invention as isomers or enantiomers or mixtures thereof concerning the respective chiral carbon center.

If desired, isomers can be separated by methods well known in the art, e.g. by liquid chromatography. The same applies for enantiomers by using e.g. chiral stationary phases. Additionally, enantiomers may be isolated by converting them into diastereomers, i.e. coupling with an enantiomerically pure auxiliary compound, subsequent separation of the resulting diastereomers and cleavage of the auxiliary residue. Alternatively, any enantiomer of a compound of formula (I) may be obtained from stereoselective synthesis using optically pure starting materials.

The compounds of formula (I) may exist in crystalline or amorphous form. Furthermore, some of the crystalline forms of the compounds of formula (I) may exist as polymorphs, which are included within the scope of the present invention. Polymorphic forms of compounds of formula (I) may be characterized and differentiated using a number of conventional analytical techniques, including X-ray powder diffraction (XRPD) patterns, infrared (IR) spectra, Raman spectra, differential scanning calorimetry (DSC), thermogravimetric analysis (TGA) and solid state nuclear magnetic resonance (ssNMR).

In case the compounds according to formula (I) contain one or more acidic or basic groups, the invention also comprises their corresponding pharmaceutically or toxicologically acceptable salts, in particular their pharmaceutically utilizable salts. Thus, the compounds of the formula (I) which contain acidic groups can be used according to the invention, for example, as alkali metal salts, alkaline earth metal salts or as ammonium salts. More precise examples of such salts include sodium salts, potassium salts, calcium salts, magnesium salts or salts with ammonia or organic amines such as, for example, ethylamine, ethanolamine, triethanolamine or amino acids. Compounds of the formula (I) which contain one or more basic groups, i.e. groups which can be protonated, can be present and can be used according to the invention in the form of their addition salts with inorganic or organic acids. Examples for suitable acids include hydrogen chloride, hydrogen bromide, phosphoric acid, sulfuric acid, nitric acid, methanesulfonic acid, p-toluenesulfonic acid, naphthalenedisulfonic acids, oxalic acid, acetic acid, tartaric acid, lactic acid, salicylic acid, benzoic acid, formic acid, propanoic acid, pivalic acid, diethylacetic acid, malonic acid, succinic acid, pimelic acid, fumaric acid, maleic acid, malic acid, sulfaminic acid, phenylpropionic acid, gluconic acid, ascorbic acid, isonicotinic acid, citric acid, adipic acid, and other acids known to the person skilled in the art. If the compounds of the formula (I) simultaneously contain acidic and basic groups in the molecule, the invention also includes, in addition to the salt forms mentioned, inner salts or betaines (zwitterions). The respective salts according to the formula (I) can be obtained by customary methods which are known to the person skilled in the art like, for example by contacting these with an organic or inorganic acid or base in a solvent or dispersant, or by anion exchange or cation exchange with other salts. The present invention also includes all salts of the compounds of the formula (I) which, owing to low physiological compatibility, are not directly suitable for use in pharmaceuticals but which can be used, for example, as intermediates for chemical reactions or for the preparation of pharmaceutically acceptable salts.

Throughout the invention, the term "pharmaceutically acceptable" means that the corresponding compound, carrier or molecule is suitable for administration to humans. Preferably, this term means approved by a regulatory agency.
such as the EMEA (Europe) and/or the FDA (US) and/or any other national regulatory agency for use in animals, preferably in humans.

[0046] The present invention furthermore includes all solvates of the compounds according to the invention.

[0047] If desired, the effects of the claimed compounds on mTOR activity may e.g. be tested using transiently expressed epitope-tagged mTOR in a mammalian cell line such as HEK293 that is immunoprecipitated with a monoclonal antibody directed against the epitope tag (Knight et al. 2004, Bioorganic and Medicinal Chemistry 12, 4749-4759). Another assay employs mTOR protein enriched from cells or tissue lysates using conventional protein purification methods. In this assay a GST-fusion protein of the P70 S6 kinase is used as a substrate. The phosphorylation of P70 S6 is detected using a primary phospho-specific antibody (directed against phosphorylated threonine 389) and an enzyme linked secondary anti-body in an ELISA assay (US-A 2004/0191836).

[0048] According to the present invention, the expression "mTOR" or "mTOR kinase" means the mTOR protein (Tsang et al., 2007, Drug Discovery Today 12, 112-124). The gene encoding mTOR is located on human chromosome map locus 1p36.2 and it is widely expressed in human tissues.

[0049] As shown in the examples, compounds of the invention were tested for their selectivity for mTOR over other kinases. As shown, tested compounds bind mTOR more selectively than the kinases PI3Kdelta or DNA-PK (see table 2 below). Consequently, the compounds of the present invention are considered to be useful for the prevention or treatment of diseases and disorders associated with mTOR, e.g. immunological, inflammatory, autoimmune, or allergic disorders, or proliferative diseases, transplant rejection, Graft-versus-Host-Disease, cardiovascular diseases, metabolic diseases or neurodegenerative diseases.

[0050] Therefore, the present invention provides pharmaceutical compositions comprising a compound of formula (I) or a pharmaceutically acceptable salt thereof as active ingredient together with a pharmaceutically acceptable carrier, optionally in combination with one or more other pharmaceutical compositions.

[0051] "Pharmaceutical composition" means one or more active ingredients, and one or more inert ingredients that make up the carrier, as well as any product which results, directly or indirectly, from combination, complexation or aggregation of any two or more of the ingredients, or from dissociation of one or more of the ingredients, or from other types of reactions or interactions of one or more of the ingredients. Accordingly, the pharmaceutical compositions of the present invention encompass any composition made by admixing a compound of the present invention and a pharmaceutically acceptable carrier.

[0052] The term "carrier" refers to a diluent, adjuvant, excipient, or vehicle with which the therapeutic is administered. Such pharmaceutical carriers can be sterile liquids, such as water and oils, including those of petroleum, animal, vegetable or synthetic origin, including peanut oil, soybean oil, mineral oil, sesame oil and the like. Water is a preferred carrier when the pharmaceutical composition is administered orally. Saline and aqueous dextrose are preferred carriers when the pharmaceutical composition is administered intravenously. Saline solutions and aqueous dextrose and glycerol solutions are preferably employed as liquid carriers for injectable solutions. Suitable pharmaceutical excipients include starch, glucose, lactose, sucrose, gelatin, malt, rice, flour, chalk, silica gel, sodium stearate, glycerol monostearate, talc, sodium chloride, dried skim milk, glycerol, propylene, glycol, water, ethanol and the like. The composition, if desired, can also contain minor amounts of wetting or emulsifying agents, or pH buffering agents. These compositions can take the form of solutions, suspensions, emulsions, tablets, pills, capsules, powders, sustained-release formulations and the like. The composition can be formulated as a suppository, with traditional binders and carriers such as triglycerides. Oral formulation can include standard carriers such as pharmaceutical grades of mannitol, lactose, starch, magnesium stearate, sodium saccharine, cellulose, magnesium carbonate, etc. Examples of suitable pharmaceutical carriers are described in "Remington's Pharmaceutical Sciences" by E.W. Martin. Such compositions will contain a therapeutically effective amount of the therapeutic, preferably in purified form, together with a suitable amount of carrier so as to provide the form for proper administration to the patient. The formulation should suit the mode of administration.

[0053] A pharmaceutical composition of the present invention may comprise one or more additional compounds as active ingredients like one or more compounds of formula (I) not being the first compound in the composition or mTOR inhibitors. Further bioactive compounds for may be steroids, leukotriene antagonists, cyclosporine or rapamycin.

[0054] The compounds of the present invention or pharmaceutically acceptable salt(s) thereof and the other pharmaceutically active agent(s) may be administered together or separately and, when administered separately, this may occur separately or sequentially in any order. When combined in the same formulation it will be appreciated that the two compounds must be stable and compatible with each other and the other components of the formulation. When formulated separately they may be provided in any convenient formulation, conveniently in such manner as are known for such compounds in the art.

[0055] It is further included within the present invention that the compound of formula (I), or a pharmaceutically acceptable salt thereof, or a pharmaceutical composition comprising a compound of formula (I) is administered in combination with another drug or pharmaceutically active agent and/or that the pharmaceutical composition of the invention further comprises such a drug or pharmaceutically active agent.

[0056] In this context, the term "drug or pharmaceutically active agent" includes a drug or pharmaceutical agent that
will elicit the biological or medical response of a tissue, system, animal or human that is being sought, for instance, by a researcher or clinician.

[0057] "Combined" or "in combination" or "combination" should be understood as a functional coadministration, wherein some or all compounds may be administered separately, in different formulations, different modes of administration (for example subcutaneous, intravenous or oral) and different times of administration. The individual compounds of such combinations may be administered either sequentially in separate pharmaceutical compositions as well as simultaneously in combined pharmaceutical compositions.

[0058] For example, in rheumatoid arthritis therapy, combination with other chemotherapeutic or antibody agents is envisaged. Suitable examples of pharmaceutically active agents which may be employed in combination with the compounds of the present invention and their salts for rheumatoid arthritis therapy include: immunosuppressants such as amtolmetin guacil, mizoribine and rimexolone; anti-TNFα agents such as etanercept, infliximab, Adalimumab, Anakinra, Abatacept, Rituximab; tyrosine kinase inhibitors such as leflunomide; kallikrein antagonists such as subreum; interleukin 11 agonists such as oprelvekin; interferon beta 1 agonists; hyaluronic acid agonists such as NRD-101 (Aventis); interleukin 1 receptor antagonists such as anakinra; CD8 antagonists such as amiprilose hydrochloride; beta amyloid precursor protein antagonists such as reumacon; matrix metalloproteinase inhibitors such as cipemastat and other disease modifying anti-rheumatic drugs (DMARDS) such as methotrextate, sulphasalazine, cyclosporin A, hydroxychoroquine, auranofin, aurothioglucose, gold sodium thiomalate and penicillamine.

[0059] In particular, the treatment defined herein may be applied as a sole therapy or may involve, in addition to the compounds of the invention, conventional surgery or radiotherapy or chemotherapy. Accordingly, the compounds of the invention can also be used in combination with existing therapeutic agents for the treatment proliferative diseases such as cancer. Suitable agents to be used in combination include:

(i) antiproliferative/antineoplastic drugs and combinations thereof, as used in medical oncology such as alkylating agents (for example cis-platin, carboplatin, cyclophosphamide, nitrogen mustard, melphalan, chlorambucil, busulfan and nitrosoureas); antimetabolites (for example for example antifolates such as fluoropyrimidines like 5-fluorouracil and tegafur, raltitrexed, methotrexate, cytosine arabinoside, hydroxyurea and gemcitabine); antitumour antibodies (for example for example anthraclynes like adriamycin, bleomycin, doxorubicin, daunomycin, epirubicin, idarubicin, mitomycin-C, dactinomycin and mithramycin); antimetabolites (for example for example vinca alkaloids like vincristine, vinblastine, vindesine and vinorelbine and taxoids like paclitaxel and taxotere); and topoisomerase inhibitors (for example for example epipodophyllotoxins like etoposide and teniposide, amsacrine, topotecan and camptothecins);

(ii) cytostatic agents such as antioestrogens (for example tamoxifen, toremifene, droloxifene and idoxofene), oestrogen receptor down regulators (for example fulvestrant), antiandrogens (for example bicalutamide, flutamide, nilutamide and cyproterone acetate), LHRH antagonists or LHRH agonists (for example goserelin, leuprorelin and buserelin), progesterons (for example megestrol acetate), aromatase inhibitors (for example for example anastrozole, letrozole, vorazole and exemestane) and inhibitors of 5α-reductase such as finasteride;

(iii) anti-invasion agents (for example c-Src kinase family inhibitors like 4-(6-chloro- 2,3 -methylene dioxyanilino)-7-[2-(4-methylpiperazin- 1 -yl)ethoxy]-5-tetrahydropyran-4-yl-quinazoline (AZD0530) and N-[2-chloro-6-methylphenyl]-2-[6-[4-(2-hydroxyethyl)piperazin-1-y1]-2-methylpyrimidin-4-ylamino]thiazole-5-carboxamide (dasatinib, BMS-354825), and metalloproteinase inhibitors like marimastat and inhibitors of urokinase plasminogen activator receptor function);

(iv) inhibitors of growth factor function: for example such inhibitors include growth factor antibodies and growth factor receptor antibodies (for example such as anti-erbB2 antibody trastuzumab [Herceptin™] and the anti-erbB1 antibody cetuximab [C225]); such inhibitors also include, for example, tyrosine kinase inhibitors, for example inhibitors of the epidermal growth factor family (for example for example EGFR family tyrosine kinase inhibitors such as N-(3-chloro-4-fluorophenyl)-7-methoxy-6-(3-morpholinoproxy)quinazolin-4-amine (gefitinib, ZD 1839), ∧(3-ethynylphenyl)-6,7-bis(2-methoxyethoxy)quinazolin-4-amine (erlotinib, OSI-774) and 6-acrylamido-∧(3-chloro-4-fluorophenyl)-7-(3-morpholinoproxy)-quinazolin-4-amine (CI 1033) and erbB2 tyrosine kinase inhibitors such as lapatinib), inhibitors of the hepatocyte growth factor family, inhibitors of the platelet-derived growth factor family such as imatinib, inhibitors of serine/threonine kinases (for example such as farnesyl transferase inhibitors, for example sorafenib (BAY 43-9006)) and inhibitors of cell signalling through MEK and/or Akt kinases;

(v) antiangiogenic agents such as those which inhibit the effects of vascular endothelial growth factor, for example the anti-vascular endothelial cell growth factor antibody bevacizumab (Avastin™) and VEGF receptor tyrosine kinase inhibitors such as 4-(4-bromo-2-fluorooanilino)-6-methoxy-7-(1-methylpiperidin-4-ylmethoxy)quinazoline (ZD6474; Example 2 within WO 01/32651), 4-(4-fluoro-2-methylindol-5-yl)-6-methoxy-7-(3-pyrollidin-1-ylpropoxy)quina-
Further combination treatments are described in WO-A 2009/008992.

Powders for the extemporaneous preparation of sterile injectable solutions or dispersions. In all cases, the form must and use, these preparations contain a preservative to prevent the growth of microorganisms. Also be prepared in glycerol, liquid polyethylene glycols and mixtures thereof in oils. Under ordinary conditions of storage cherry or orange flavor.

Various other materials may be present as coatings or to modify the physical form of the dosage unit. For example, tablets may be coated with shellac, sugar or both. A syrup or elixir may contain, in addition to the active ingredient, sucrose as a sweetening agent, methyl and propylparabens as preservatives, a dye and a flavoring such as cherry or orange flavor.

The pharmaceutical compositions of the present invention include compositions suitable for oral, rectal, topical, parenteral (including subcutaneous, intramuscular, and intravenous), ocular (ophthalmic), pulmonary (nasal or buccal inhalation), or nasal administration, although the most suitable route in any given case will depend on the nature and severity of the conditions being treated and on the nature of the active ingredient. They may be conveniently presented in unit dosage form and prepared by any of the methods well-known in the art of pharmacy.

In practical use, the compounds of formula (I) can be combined as the active ingredient in intimate admixture with a pharmaceutical carrier according to conventional pharmaceutical compounding techniques. The carrier may take a wide variety of forms depending on the form of preparation desired for administration, e.g., oral or parenteral (including intravenous). In preparing the compositions for oral dosage form, any of the usual pharmaceutical media may be employed, such as water, glycols, oils, alcohols, flavoring agents, preservatives, coloring agents and the like in the case of oral liquid preparations, such as, for example, suspensions, elixirs and solutions; or carriers such as starches, sugars, microcrystalline cellulose, diluents, granulating agents, lubricants, binders, disintegrating agents and the like in the case of oral solid preparations such as powders, hard and soft capsules and tablets, with the solid oral preparations being preferred over the liquid preparations.

Because of their ease of administration, tablets and capsules represent the most advantageous oral dosage unit form in which case solid pharmaceutical carriers are obviously employed. If desired, tablets may be coated by standard aqueous or non-aqueous techniques. Such compositions and preparations should contain at least 0.1 percent of active compound. The percentage of active compound in these compositions may, of course, be varied and may conveniently be between about 2 percent to about 60 percent of the weight of the unit. The amount of active compound in such therapeutically useful compositions is such that an effective dosage will be obtained. The active compounds can also be administered intranasally, for example, as liquid drops or spray.

The tablets, pills, capsules, and the like may also contain a binder such as gum tragacanth, acacia, corn starch or gelatin; excipients such as dicalcium phosphate; a disintegrating agent such as corn starch, potato starch, alginic acid; a lubricant such as magnesium stearate; and a sweetening agent such as sucrose, lactose or saccharin. When a dosage unit form is a capsule, it may contain, in addition to materials of the above type, a liquid carrier such as fatty oil.

Various other materials may be present as coatings or to modify the physical form of the dosage unit. For instance, tablets may be coated with shellac, sugar or both. A syrup or elixir may contain, in addition to the active ingredient, sucrose as a sweetening agent, methyl and propylparabens as preservatives, a dye and a flavoring such as cherry or orange flavor.

Compounds of formula (I) may also be administered parenterally. Solutions or suspensions of these active compounds can be prepared in water suitably mixed with a surfactant such as hydroxypropyl-cellulose. Dispersions can also be prepared in glycerol, liquid polyethylene glycols and mixtures thereof in oils. Under ordinary conditions of storage and use, these preparations contain a preservative to prevent the growth of microorganisms.

The pharmaceutical forms suitable for injectable use include sterile aqueous solutions or dispersions and sterile powders for the extemporaneous preparation of sterile injectable solutions or dispersions. In all cases, the form must
be sterile and must be fluid to the extent that easy syringability exists. It must be stable under the conditions of manufacture and storage and must be preserved against the contaminating action of microorganisms such as bacteria and fungi. The carrier can be a solvent or dispersion medium containing, for example, water, ethanol, polyol (e.g., glycerol, propylene glycol and liquid polyethylene glycol), suitable mixtures thereof, and vegetable oils.

Any suitable route of administration may be employed for providing a mammal, especially a human, with an effective dose of a compound of the present invention. For example, oral, rectal, topical, parenteral, ocular, pulmonary, nasal, and the like may be employed. Dosage forms include tablets, troches, dispersions, suspensions, solutions, capsules, creams, ointments, aerosols, and the like. Preferably compounds of formula (I) are administered orally.

The effective dosage of active ingredient employed may vary depending on the particular compound employed, the mode of administration, the condition being treated and the severity of the condition being treated. Such dosage may be ascertained readily by a person skilled in the art.

A therapeutically effective amount of a compound of the present invention will normally depend upon a number of factors including, for example, the age and weight of the animal, the precise condition requiring treatment and its severity, the nature of the formulation, and the route of administration. However, an effective amount of a compound of formula (I) for the treatment of an inflammatory disease, for example rheumatoid arthritis (RA), will generally be in the range of 0.1 to 100 mg/kg body weight of recipient (mammal) per day and more usually in the range of 1 to 10 mg/kg body weight per day. Thus, for a 70 kg adult mammal, the actual amount per day would usually be from 70 to 700 mg and this amount may be given in a single dose per day or more usually in a number (such as two, three, four, five or six) of sub-doses per day such that the total daily dose is the same. An effective amount of a pharmaceutically acceptable salt thereof, may be determined as a proportion of the effective amount of the compound of formula (I) per se. It is envisaged that similar dosages would be appropriate for treatment of the other conditions referred to above.

As used herein, the term "effective amount" means that amount of a drug or pharmaceutical agent that will elicit the biological or medical response of a tissue, system, animal or human that is being sought, for instance, by a researcher or clinician.

Furthermore, the term "therapeutically effective amount" means any amount which, as compared to a corresponding subject who has not received such amount, results in improved treatment, healing, prevention, or amelioration of a disease, disorder, or side effect, or a decrease in the rate of advancement of a disease or disorder. The term also includes within its scope amounts effective to enhance normal physiological function.

Another aspect of the present invention is a compound of the present invention or a pharmaceutically acceptable salt thereof for use as a medicament.

Another aspect of the present invention is a compound of the present invention or a pharmaceutically acceptable salt thereof for use in a method of treating or preventing a disease or disorder associated with mTOR.

In the context of the present invention, a disease or disorder associated with mTOR is defined as a disease or disorder where mTOR is involved.

In a preferred embodiment, the diseases or disorder associated with mTOR is an immunological, inflammatory, autoimmune, or allergic disorder or disease or a transplant rejection or a Graft-versus-host disease.

Consequently, another aspect of the present invention is a compound or a pharmaceutically acceptable salt thereof of the present invention for use in a method of treating or preventing an immunological, inflammatory, autoimmune, or allergic disorder or disease or a transplant rejection or a Graft-versus-host disease.

According to the present invention, an autoimmune disease is a disease which is at least partially provoked by an immune reaction of the body against own components, e.g. proteins, lipids or DNA.

In a preferred embodiment, the autoimmune disease is selected from the group consisting of rheumatoid arthritis (RA), inflammatory bowel disease (IBD; Crohn’s disease and ulcerative colitis), psoriasis, systemic lupus erythematosus (SLE), and multiple sclerosis (MS).

[0083] Systemic lupus erythematosus (SLE) is a chronic inflammatory disease generated by T cell-mediated B-cell activation, which results in glomerulonephritis and renal failure. Human SLE is characterized at early stages by the expansion of long-lasting autoreactive CD4+ memory cells (D’Cruz et al., 2007, Lancet 369(9561):587-596).

[0084] Multiple sclerosis (MS) is an inflammatory and demyelinating neurological disease. It has been considered as an autoimmune disorder mediated by CD4+ type 1 T helper cells, but recent studies indicated a role of other immune cells (Hemmer et al., 2002, Nat. Rev. Neuroscience 3:291-301).

[0085] Graft-versus-host disease (GVHD) is a major complication in allogeneic bone marrow transplantation. GVHD is caused by donor T cells that recognize and react to recipient differences in the histocompatibility complex system, resulting in significant morbidity and mortality.

[0086] Transplant rejection (allograft transplant rejection) includes acute and chronic allograft rejection following for example transplantation of kidney, heart, liver, lung, bone marrow, skin and cornea. It is known that T cells play a central role in the specific immune response of allograft rejection.

[0087] In a further preferred embodiment, the disease or disorder associated with mTOR is a proliferative disease, especially cancer.

[0088] Diseases and disorders associated especially with mTOR are proliferative disorders or diseases, especially cancer.

[0089] Therefore, another aspect of the present invention is a compound or a pharmaceutically acceptable salt thereof of the present invention for use in a method of treating or preventing a proliferative disease, especially cancer.

[0090] Cancer comprises a group of diseases characterized by uncontrolled growth and spread of abnormal cells. All types of cancers generally involve some abnormality in the control of cell growth, division and survival, resulting in the malignant growth of cells. Key factors contributing to said malignant growth of cells are independence from growth signals, insensitivity to anti-growth signals, evasion of apoptosis, limitless replicative potential, sustained angiogenesis, tissue invasion and metastasis, and genome instability (Hanahan and Weinberg, 2000. The Hallmarks of Cancer. Cell 100, 57-70).

[0091] Typically, cancers are classified as hematological cancers (for example leukemias and lymphomas) and solid cancers such as sarcomas and carcinomas (for example cancers of the brain, breast, lung, colon, stomach, liver, pancreas, prostate, ovary).

[0092] Especially cancers in which the PI3K/Akt signal transduction pathway is activated, for example due to inactivation of the tumour suppressor PTEN or activating mutations in PIK3A, the gene encoding the catalytic phosphoinositide-3 kinase subunit p110α (p110alpha) are expected to respond to treatment with mTOR inhibitors (Garcia-Echeverria and Sellers, 2008, Oncogene 27, 5511-5526). Examples of cancers with a high incidence of PTEN mutations and/or activation of PI3K/Akt are endometrial carcinoma, glioblastoma, head and neck cancer, colon cancer, pancreatic cancer, gastric cancer, hepatocarcinoma, ovarian cancer, thyroid carcinoma, renal cell cancer, breast cancer, prostate cancer and gastrointestinal stromal tumours (GIST). The most promising results with mTOR inhibitors have been obtained in renal cell carcinoma (RCC), mantle cell lymphoma and endometrial cancers (Faiy et al., 2006, Nat. Rev. Drug. Discov. 5(8):671-688). In addition, mTOR inhibitors may be useful for the treatment of leukemias including ALL and CML, multiple myeloma and lymphomas.

[0093] In addition, cancers harbouring activating mTOR mutations, for example single amino acid changes that confer constitutive activation of mTOR such as S2215Y or R2505P, may be treated with mTOR inhibitors (Sato et al., 2010, Oncogene 29(18):2746-2752).

[0094] mTOR plays an important role in angiogenesis, the formation of new blood vessels to provide oxygen and nutrients to growing and dividing cells. In this context mTOR controls the production of the HIF 1-α and HIF1-β proteins, which are subunits of hypoxia-inducible factor (HIF), a transcription factor that controls the expression of genes whose products play a role in angiogenesis, cell proliferation, motility and survival. Two important proteins induced by HIF are vascular endothelial growth factors (VEGFs) and angiopoietin-2. Recently it has been reported that a small molecule mTOR inhibitor can reduce tumour growth, tumour angiogenesis an vascular permeability (Xue et al., 2008. Cancer Research 68(22): 9551-9557).

[0095] In addition to tumourigenesis, there is evidence that mTOR plays a role in hamartoma syndromes. Recent studies have shown that the tumour suppressor proteins such as TSC1, TSC2, PTEN and LKB1 tightly control mTOR signalling. Loss of these tumour suppressor proteins leads to a range of hamartoma conditions as a result of elevated mTOR signalling (Rosner et al., 2008. Mutation Research 659(3):284-292). Syndromes with an established molecular link to dysregulation of mTOR include Peutz-Jeghers syndrome (PJS), Cowden disease, Bannayan-Riley-Ruvalcaba syndrome (BRRS), Proteus syndrome, L’hermitte-Duclos disease and Tuberous sclerosis (TSC). Patients with these syndromes characteristically develop benign hamartomatous tumours in multiple organs. Other tumour suppressor proteins having an influence on mTOR activity are VHL, NF1 and PKD whose loss can trigger von Hippel-Lindau disease, Neurofibromatosis type 1, and Polycystic kidney disease respectively.

[0096] Proliferative disorders or disorders comprises a group of diseases characterized by increased cell multiplication.
One example is restenosis caused by the overgrowth of vascular smooth muscle (VSM) cells after coronary angioplasty with stents. To circumvent this issue, drug-eluting stents have been developed to inhibit the growth of VSM cells. Rapamycin-coated stents effectively reduce restenosis and have been approved by the FDA (Serruys et al., 2006. N. Engl. J. Med. 354(5):483-95).

In a further preferred embodiment, the disease or disorder associated with mTOR is a cardiovascular disease, a metabolic disease or a neurodegenerative disease.

Therefore, another aspect of the present invention is a compound or a pharmaceutically acceptable salt thereof of the present invention for use in a method of treating or preventing a cardiovascular disease, a metabolic disease or a neurodegenerative disease.

Recent studies have revealed a role of mTOR in cardiovascular diseases, for example elevated mTOR kinase activity has been associated with cardiac hypertrophy (heart enlargement), which is a major risk factor for heart failure. At the cellular level, cardiac hypertrophy is characterized by an increase in cell size and enhanced protein synthesis. Although there are various hypertrophic stimuli, such as neurohormones and peptide growth factors, and several protein kinase cascades are involved in cardiac hypertrophy, it is likely that all forms of hypertrophic stimuli activate the general protein translational machinery in an mTOR dependent manner. Remarkably, inhibition of mTOR by rapamycin prevents cardiac hypertrophy in numerous transgenic mouse models. In addition, stress-induced cardiac hypertrophy is dependent on mTOR in mice. These results indicate that mTOR is crucial for the abnormal cardiac overgrowth, and that mTOR inhibitors may be useful for the treatment of human cardiac hypertrophy (Tsang et al., 2007, Drug Discovery Today 12, 112-124).

Metabolic diseases that may be treated with mTOR inhibitors comprise type 1 diabetes, type 2 diabetes, and obesity (Tsang et al., 2007, Drug Discovery Today 12, 112-124). Type 1 diabetes is caused by loss of insulin production due to destruction of pancreatic β-cells. Clinical studies using immunosuppressive regimens that contain rapamycin to prevent rejection of islet transplants have shown significant efficacy in type 1 diabetic patients. Type 2 diabetes arises when insulin secretion from pancreatic β-cells fails to compensate for the peripheral insulin resistance (or insensitivity to insulin) in skeletal muscle, liver and fat cells.

Recent data indicate that sustained activation of mTOR signalling is a crucial event that renders insulin-receptors substrate (IRS) insensitive to insulin. Moreover, it has been demonstrated that rapamycin restores the sensitivity of IRS to insulin (Shah et al., 2004. Curr. Biol. 14(18):1650-1656). Therefore, mTOR inhibitors are potentially useful in the management of type 2 diabetes. Obesity is a metabolic disease with a steadily increasing health risk worldwide. Recent evidence suggests that mTOR plays a role in lipid metabolism. During adipogenesis the expression of mTOR increases dramatically from barely detectable in preadipocytes to highly expressed in fully differentiated adipocytes, and rapamycin inhibits adipocyte differentiation (Yeh et al., 1995. Proc. Natl. Acad. Sci. USA. 92(24):11086-90).

Recent reports suggest that mTOR inhibitors may be useful to treat neurodegenerative diseases such as Huntington's, Alzheimer's and Parkinson's disease. Huntington's disease is a neurodegenerative disorder caused by a mutant form of the protein huntingtin with abnormally long glutamine repeats at the amino-terminus. The mutant protein aggregates in neuronal cells and can cause nerve cell damage and toxicity. Rapamycin attenuates the accumulation of huntingtin and cell death, and protects against neurodegeneration in animal models of Huntington's disease (Ravikumar et al., 2004. Nat Genet. 36(6):585-95). In addition, rapamycin induces an autophagy response that has been suggested to play a role in the clearance of huntingtin aggregates.

Intracellular protein aggregates also occur in other neurodegenerative diseases, for example Alzheimer's disease. The Tau protein is frequently found in brains of Alzheimer's patients and is thought to contribute to the formation of neurofibrillary tangles (for example in tauopathies such as fronto-temporal dementia). In a fly model rapamycin reduces the concentration of tau protein and lowers the toxicity caused by tau accumulation (Berger et al., 2006. Hum Mol Genet. 2006 Feb 1;15(3):433-42). Therefore, mTOR inhibitors may be useful in preventing the accumulation of toxic tau protein in Alzheimer's patients.

Parkinson's disease (PD) is a neurodegenerative disease associated with the accumulation and aggregation of misfolded proteins. Preventing aggregation or disaggregating misfolded proteins may provide a therapeutic benefit by slowing or preventing the progression of PD. The ubiquitin-proteasome system (UPS) is an important degradation mechanism acting on aggregated proteins. It was reported that rapamycin provides neuroprotection against dopaminergic neuronal cell death induced by the proteasome inhibitor lactacystin. It was suggested that the rapamycin effect is partially mediated by autophagy enhancement through enhanced degradation of misfolded proteins (Pan et al., 2008. Neurobiol. Dis. 32(1):16-25). Therefore compounds that can enhance autophagy may represent a promising strategy to treat PD patients.

In a further preferred embodiment, the disease or disorder associated with mTOR is an autophagy associated disease.

Therefore, another aspect of the present invention is a compound or a pharmaceutically acceptable salt thereof of the present invention for use in a method of treating or preventing an autophagy associated disease.

Autophagy is a lysosome-dependent process whereby proteins or damaged organelles within a cell are de-
Autophagy inducing compound refers to a compound that induces autophagy in a cell. Autophagy associated diseases refer to a disease that can be treated by the induction of autophagy. It has recently been shown that an ATP-competitive mTOR kinase inhibitor can induce autophagy (Thoreen et al., 2009. J. Biol. Chem. 284(12):8023-32). Interestingly, ATP competitive mTOR kinase inhibitors seem to induce autophagy more effectively than rapamycin in mammalian cells. Taken together, compounds of the present invention may be useful to induce autophagy in cells and to treat autophagy associated diseases.

Therefore, another aspect of the present invention is a compound or a pharmaceutically acceptable salt thereof of the present invention for use as a method of treating or preventing a viral infection. All viruses require cellular ribosomes to translate their mRNAs. For example, Human cytomegalovirus (HCMV) infection has been shown to activate the mTORC1 signaling pathway. Treatment of infected cells with Torin1, a mTOR inhibitor that targets the catalytic site of mTOR kinase, blocks the production of virus progeny. In addition, it was shown that Torin1 inhibits the replication of representative members of the alpha-, beta-, and gammaherpesvirus families, demonstrating the potential of mTOR kinase inhibitors as broad-spectrum antiviral agents (Moorman and Shenk, 2010. J. Virol. 84(10):5260-9). Further viral infections that may be treated or prevented by mTOR inhibitors are described in WO-A 2011/011716.

In the context of these uses of the invention, diseases and disorders associated with mTOR are as defined above. Therefore, another aspect of the present invention is the use of a compound of the present invention or a pharmaceutically acceptable salt thereof for the manufacture of a medicament for treating or prophylaxis of diseases and disorders associated with mTOR.
Also disclosed is a method for treating, controlling, delaying or preventing in a mammalian patient in need thereof an autophagy associated disease, wherein the method comprises the administration to said patient a therapeutically effective amount of a compound according to present invention or a pharmaceutically acceptable salt thereof.

Also disclosed is a method for treating, controlling, delaying or preventing in a mammalian patient in need thereof a viral infection, wherein the method comprises the administration to said patient a therapeutically effective amount of a compound according to present invention or a pharmaceutically acceptable salt thereof.

In the context of these methods of the invention, diseases and disorders associated with mTOR are as defined above.

As used herein, the term "treating" or "treatment" is intended to refer to all processes, wherein there may be a slowing, interrupting, arresting, or stopping of the progression of a disease, but does not necessarily indicate a total elimination of all symptoms.

All embodiments discussed above with respect to the pharmaceutical composition of the invention also apply to the above mentioned first or second medical uses or methods of the invention.

Exemplary routes for the preparation of compounds of the present invention are described below. It is clear to a practitioner in the art to combine or adjust such routes especially in combination with the introduction of activating or protective chemical groups.

In general initial addition of morpholine (or substituted morpholine) to cyanuric chloride is followed by a first Suzuki coupling reaction to add a phenyl (or heterocyclic) sulphone or sulphonamide and a second Suzuki coupling reaction to add a phenyl urea. (Scheme 1)

Alternatively the order of the Suzuki coupling steps may be reversed (Scheme 2)
In some cases the sulphone moiety is initially added as a thioether and subsequently oxidized to give the sulphone. (Scheme 3)

To access a wider range of urea variations the initial addition of a protected aniline or phenyl nitro group is followed by deprotection or reduction respectively and the resulting aniline is subsequently reacted with triphosgene and a suitable amine to give the desired urea. (Scheme 4) Alternative urea formation methods may also be used.
Examples

Analytical Methods

[0133] NMR spectra were obtained on a Brucker dpx400.

[0134] LCMS was carried out on an Agilent 1100. Solvents used were water and acetonitrile (both with 0.1% formic acid) with an injection volume of 3 μL. Wavelengths were 254 and 210 nm. The mass spec data were gathered in positive mode scanning for masses between 150 and 700 amu.

Method A

[0135] Column: Phenomenex Gemini-NX C18, 3 x 30 mm, 3 microns. Flow rate: 1.2 mL/min

Example 1:

(S)-1-cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea

Step (i)

To a solution of cyanuric chloride (1.844g, 10.0mmol) in DCM (20mL) was added 3S-S-Methylmorpholine (1.012g) in DCM (3mL) dropwise. The reaction mixture was stirred at room temperature for 20 minutes. The reaction mixture was washed with water (20mL), the organic layer passed through a hydrophobic frit and concentrated in-vacuo to leave a yellow solid (S)-4-(4,6-dichloro-1,3,5-triazin-2-yl)-3-methylmorpholine, 1.91g, 77%. LC-MS (method A), (ES+) 249/251, RT = 2.45 min.

Step (ii)

A mixture of (S)-4-(4,6-dichloro-1,3,5-triazin-2-yl)-3-methylmorpholine (1.25g, 5.0mmol), 2-methylsulfonylphenylboronic acid (1.1g, 5.5mmol), sodium carbonate (1.6g, 15.0mmol) and bis(triphenylphosphene)palladium(II) dichloride (205mg, 0.25mmol) in DME/H2O/ (4:1, 10mL) was heated in the microwave at 60°C for 25 minutes. The mixture was then diluted with DCM (200mL), washed with water (200mL), the organic layer passed through a PTFE hydrophobic frit and the solvent removed in vacuo to yield a dark orange/brown oil (S)-4-(4-chloro-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-3-methylmorpholine, 2.59g, >100%, crude. LC-MS (method B ), (ES+) 369, RT = 9.43 min.
Step (iii)

[0142] A mixture of (S)-4-(4-chloro-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-3-methylmorpholine (400mg, 1.0mmol), 4-(3-cyclopropylureido)phenyl boronic acid (302mg, 1.0mmol), sodium carbonate (318mg, 3.0mmol) and bis(triphenylphosphene)palladium(II) dichloride (41mg, 0.05mmol) in DME/H2O/ (4:1, 5mL) was heated in the microwave at 100°C for 30 minutes. The mixture was then diluted with DCM (70mL), washed with water (70mL), the organic layer passed through a PTFE hydrophobic frit and the solvent removed in vacuo to yield a brown oil, 1.1g.

[0143] The oil was purified by flash chromatography using DCM (4 column volumes) followed by 0-15% MeOH/DCM (10 column volumes) to yield a brown residue, 320mg. The brown residue was purified further by prep HPLC. The desired fractions were concentrated in a Genevac to afford an off-white solid (S)-1-cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)phenyl)urea, 67mg, 15%.

1HNMR (d6-DMSO) 8.78 (s, 1H), 8.27 (d, 2H), 8.09-9.07 (m, 1H), 7.89-7.85 (m, 1H), 7.75-7.73 (m, 1H), 7.58-7.55 (d, 2H), 6.58-6.56 (m, 1H), 5.04-4.27 (m, 2H), 4.04-3.90 (m, 1H), 3.84-3.56 (m, 2H), 3.51 (s, 3H), 2.59-2.52 (m, 1H), 1.40-1.26 (m, 3H), 0.67-0.62 (m, 2H), 0.44-0.62 (m, 2H) and 2 protons hidden under the water peak.

LC-MS (method B), (ES+) 509, RT = 9.28 min.

Example 2:

(S)-1-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylurea

[0144]

Step (i)

[0145] A mixture of (S)-4-(4,6-dichloro-1,3,5-triazin-2-yl)-3-methylmorpholine (step (i) example 1) (4g, 16.1 mmol), 1-methyl-3-(4-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)phenyl)urea (4.67g, 16.1mmol), bis(triphenylphosphene)palladium(II) dichloride (0.66g, 0.8mmol) and 2M Na2CO3 (8ml, 19.6mmol) in DME (32ml) was heated in the microwave at 90°C for 90 minutes. The mixture was diluted with DCM (200mL), washed with water (200mL), the organic layer passed through a PTFE hydrophobic frit and the solvent removed in vacuo to yield a black oil. The oil was purified by flash chromatography using Pet ether, EtOAc 0 - 100% gradient to yield an off-white solid of (S)-1-(4-(4-chloro-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylurea. (932mg, 15%)

LC-MS (method A), (ES+) 363, RT = 2.44 min.
Step (ii)

[0146] A mixture of (S)-1-(4-(4-chloro-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylurea (250mg, 0.69mmol), 2-(methylsulfanyl)pyridine-3-boronic acid pinacol ester (190mg, 0.76mmol), bis(triphenylphosphene)palladium(II) dichloride (28mg, 0.035mmol) and 2M Na2CO3 (420 ml, 0.84mmol) in DME (1.7ml) was heated in the microwave at 100°C for 60 minutes. The mixture was diluted with DCM (70mL), washed with water (70mL), the organic layer passed through a PTFE hydrophobic frit and the solvent removed in vacuo to yield a yellow solid of (S)-1-(4-(4-(5-fluoro-2-(methylthio)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylurea. (520mg, used without further purification).

Step (iii)

[0147] (S)-1-(4-(4-(5-fluoro-2-(methylthio)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylurea (258mg, 0.55mmol) was stirred with Potassium peroxymonosulfate (Oxone) (1.01g, 1.65mmol) in THF:MeOH:H2O (5:3:2)(10ml) for 1 hour at 0°C. Reaction allowed to reach room temperature and stirred overnight with more oxone (1.01g, 1.65mmol). The mixture is quenched with saturated sodium thiosulfate solution (10ml). Diluted with DCM (50mL) and washed with brine (50mL). The organic layer was passed through a hydrophobic frit and concentrated in vacuo. The resulting solid was purified by prep HPLC at to afford the title compound as a yellow solid. (127mg, Yield 46%).

1H NMR (d6-DMSO) 8.94 (s, 1H) 8.25 (m, 2H) 8.14 (m, 1H) 7.65 (m, 2H) 7.55 (d, 2H) 6.17 (m, 1H) 5.05 - 4.20 (t, 2H) 4.05 - 3.25 (m, 5H) 3.51 (s, 3H) 2.67 (d, 3H) 1.29 (s, 3H) LCMS (method B), (M+H+) 501 RT=9.15.

Example 3:

(S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(pyridin-3-yl)urea

[0148]
Step (i)

To a solution of (S)-4-(4-chloro-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-3-methylmorpholine (step (ii) Example 1) (1g, 2.7mmol) in 1,4-dioxane (16ml) was added tert-butyl (4-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)phenyl)carbamate (1eq), Pd(dppf)Cl2.DCM (0.05eq) and 2M aqueous Na2CO3. The reaction was heated in the microwave at 120°C for 40 minutes. The reaction was concentrated in vacuo and the residue partitioned between saturated NaHCO3 and DCM. The aqueous phase was extracted three times into DCM, the organic extracts were combined, dried over magnesium sulphate and concentrated in vacuo. The residue was purified by flash chromatography on a Nh-KP column, eluting with 0-100% EtOAc in petroleum ether. The compound was deprotected by stirring in MeOH (10ml) with 4M HCl in 1,4-dioxane (5ml) for 24hrs to give (S)-4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)aniline hydrochloride, 716mg, 57% yield.

\[ \text{1H NMR (400 MHz, DMSO)} \delta 8.16 (d, 1H), 8.06 (dd, 1H), 7.86 (td, 1H), 7.79 (td, 1H), 7.72 (dd, 1H), 6.81 (d, 2H), 4.96 (br s, 5H), 4.65 (br s, 1H), 4.34 (br s, 1H), 3.96 (br s, 1H), 3.49 (s, 3H), 3.46 (br s, 1H), 3.34 (br s, 1H), 1.38 (br s, 3H);
\]

LCMS (method B ), (M+H+) 426, RT = 9.24 min.

Step (ii)

To an ice cold solution of (S)-4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)aniline hydrochloride (0.217g, 0.47mmol) in THF/pyridine (4:1 respective ratio, 10ml) was added triphosgene (1eq) portionwise. The resulting suspension was stirred for five minutes before adding to an ice cold solution of 3-aminopyridine (4eq) in THF/pyridine (4:1 respective ratio, 2ml). The reaction was stirred at 0°C for 1hr after which time it was quenched by addition of methanol and concentrated in vacuo. The residue was purified by high pH preparative HPLC to afford the title compound, (S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(pyridin-3-yl)urea, 24mg, 38% yield. \[ \text{1H NMR (400 MHz, MeOD)} \delta 8.63 (d, 1H), 8.38 - 8.33 (m, 2H), 8.19 (dd, 1H), 8.18 - 8.10 (m, 1H), 8.02 (ddd, 1H), 7.82 (td, 1H), 7.77 - 7.68 (m, 2H), 7.60 - 7.56 (m, 2H), 7.38 (dd, 1H), 5.17 - 4.37 (m, 2H), 3.99 (br s, 1H), 3.84 - 3.67 (m, 2H), 3.57 (t, 1H), 3.48 (s, 3H), 3.38 (dd, 1H), 1.39 (d, 3H);
\]

LCMS (method B ), (M+H+) 546, RT = 7.00 min.

The following compounds were synthesised by methods analogous to those described above.

Determination of the effect of the compounds according to the invention on mTOR

[0152] The compounds of the present invention as described were tested in the mTOR kinobeads assay as described below. Briefly, test compounds (at various concentrations) and the affinity matrix (1:1 mixture of beads with immobilized phenylthiazole ligand 1 and beads with immobilized phenylmorpholin-chromen ligand; WO 2009/098021) were added to cell lysate aliquots and allowed to bind to the proteins in the lysate sample. After the incubation time the beads with captured proteins were separated from the lysate. Bound proteins were then eluted and the presence of mTOR, PI3K alpha (PI3Kα), PI3K beta (PI3Kβ), PI3K gamma (PI3Kγ), PI3K delta (PI3Kδ) and DNA-dependent protein kinase (DNA-PK) was detected and quantified using a specific antibody in a dot blot procedure and the Odyssey infrared detection system. Dose response curves for individual kinases were generated and IC50 values calculated. Kinobeads assays for PI3 kinases (WO-A 2008/015013) and for kinase selectivity profiling (WO 2009/098021) have been previously described.

Washing of affinity matrix

[0153] The affinity matrix (beads with immobilized phenylmorpholin-chromen ligand) was washed three times with 15 ml of 1x DP buffer containing 0.2% NP40 (IGEPAL® CA-630, Sigma, #13021) and then resuspended in 5.5 ml of 1x DP buffer containing 0.2% NP40 (10% beads slurry).

[0154] 5xDP buffer: 250 mM Tris-HCl pH 7.4, 25% Glycerol, 7.5 mM MgCl2, 750 mM NaCl, 5 mM Na3VO4, filter the 5x-lysis buffer through 0.22 m filter and store in aliquots at -80°C. The 5xDP buffer is diluted to 1xDP buffer containing 1 mM DTT and 25 mM NaF.

Preparation of test compounds

[0155] Stock solutions of test compounds were prepared in DMSO. In a 96 well plate 30 μl solution of diluted test compounds at 5 mM in DMSO were prepared. Starting with this solution a 1:3 dilution series (9 steps) was prepared. For control experiments (no test compound) a buffer containing 2% DMSO was used. Compound PI-103 served as a positive control (Calbiochem catalogue number 528100).

Cell culture and preparation of cell lysates

[0156] Jurkat cells (ATCC catalogue number TIB-152 Jurkat, clone E6-1) were grown in 1 litre Spinner flasks (Integra Biosciences, #182101) in suspension in RPMI 1640 medium (Invitrogen, #21875-034) supplemented with 10% Fetal Bovine Serum (Invitrogen) at a density between 0.15 x 10⁶ and 1.2 x 10⁶ cells/ml. Cells were harvested by centrifugation, washed once with 1 x PBS buffer (Invitrogen, #14190-094) and cell pellets were frozen in liquid nitrogen and subsequently stored at -80°C.

[0157] Jurkat cells were homogenized in a Potter S homogenizer in lysis buffer: 50 mM Tris-HCl, 0.8% NP40, 5% glycerol, 150 mM NaCl, 1.5 mM MgCl2, 25 mM NaF, 1 mM sodium vanadate, 1 mM DTT, pH 7.5. One complete EDTA-free tablet (protease inhibitor cocktail, Roche Diagnostics, 1873580) per 25 ml buffer was added. The material was dounced 10 times using a mechanized POTTER S, transferred to 50 ml falcon tubes, incubated for 30 minutes on ice and spun down for 10 min at 20,000 g at 4°C (10,000 rpm in Sorvall SLA600, precooled). The supernatant was transferred to an ultracentrifuge (UZ)-polycarbonate tube (Beckmann, 355654) and spun for 1 hour at 100,000 g at 4°C (33,500 rpm in TI50.2, precooled). The supernatant was transferred again to a fresh 50 ml falcon tube, the protein concentration was determined by a Bradford assay (BioRad) and samples containing 50 mg of protein per aliquot were prepared. The samples were immediately used for experiments or frozen in liquid nitrogen and stored frozen at -80°C.

Dilution of cell lysate

[0158] Jurkat cell lysate (approximately 50 mg protein per plate) was thawed in a water bath at room temperature and then kept on ice. To the thawed cell lysate 1xDP 0.8% NP40 buffer containing protease inhibitors (1 tablet for 25 ml buffer; EDTA-free protease inhibitor cocktail; Roche Diagnostics 1873580) was added in order to reach a final protein concentration of 5mg/ml total protein. The diluted cell lysate was stored on ice.

Incubation of lysate with test compound and affinity matrix

[0159] To a 96 well filter plate (Multiscreen HTS, BV Filter Plates, Millipore #MSBV1250) were added per well: 50 μl affinity matrix (10% beads slurry), 3 μl of compound solution, and 100 μl of cell diluted lysate. Plates were sealed and incubated for three hours in a cold room on a Thermomixer with shaking (750 rpm). Afterwards the plate was washed three times with 230 μl washing buffer (1xDP 0.4% NP40). The filter plate was placed on top of a collection plate (Greiner...
bio-one, PP-microplate 96 well V-shape, 65120) and the beads were then eluted with 20 µl of sample buffer (100 mM Tris, pH 7.4, 4% SDS, 0.00025% Bromophenol blue, 20% glycerol, 50 mM DTT). The eluate was frozen quickly at -80°C and stored at -20°C.

Detection and quantification of eluted kinases

[0160] The kinases in the eluates were detected and quantified by spotting on Nitrocellulose membranes and using a first antibody directed against the kinase of interest and a fluorescently labelled secondary antibody (anti-mouse or anti-rabbit IRDye™ antibodies from Rockland). The Odyssey Infrared Imaging system from LI-COR Biosciences (Lincoln, Nebraska, USA) was operated according to instructions provided by the manufacturer (Schutz-Geschwendener et al., 2004. Quantitative, two-color Western blot detection with infrared fluorescence. Published May 2004 by LI-COR Biosciences, www.licor.com).

[0161] After spotting of the eluates the nitrocellulose membrane (BioTrace NT; PALL, #BTNT30R) was first blocked by incubation with Odyssey blocking buffer (LICOR, 927-40000) for one hour at room temperature. Blocked membranes were then incubated for 16 hours at 25°C (or at 4°C) with the first antibody diluted in Odyssey blocking buffer (LICOR #927-40000). Afterwards the membrane was washed twice for 10 minutes with PBS buffer containing 0.1% Tween 20 at room temperature. Then the membrane was incubated for 60 minutes at room temperature with the detection antibody (IRDye™ labelled antibody from Rockland) diluted in Odyssey blocking buffer (LICOR #927-40000). Afterwards the membrane was washed twice for 10 minutes each with 1 x PBS buffer containing 0.1% Tween 20 at room temperature. Then the membrane was rinsed once with PBS buffer to remove residual Tween 20. The membrane was kept in PBS buffer at 4°C and then scanned with the Odyssey instrument. Fluorescence signals were recorded and analysed according to the instructions of the manufacturer.

In vitro phospho-S6 and phospho-Akt cellular assay

Activation of mTOR signaling results in phosphorylation of several downstream targets. In cells, mTOR exists in two different protein complexes. The mTOR Complex-1 (mTORC1) phosphorylates and activates S6 Kinase 1 (S6K1) and S6 Kinase 2 (S6K2) (also known as p70S6K) which then phosphorylate S6 Ribosomal Protein (S6RP) (also known as RPS6) [3]. S6RP is phosphorylated on serine 235, serine 236, serine 240 and serine 244 by both pS6K1 and pS6K2. The mTOR Complex-2 (mTORC2) phosphorylates AKT on serine 473 which activates the AKT signaling pathway.

The assay measures a test compound’s inhibition of S6RP serine-240/244 phosphorylation and inhibition of Akt serine-473 phosphorylation in human embryonic kidney derived HEK293T/17 cells (ATCC CRL-11268).

The HEK293T/17 cell line is maintained in DMEM media (Invitrogen catalogue number 41965-039) supplemented with 10% FCS at 37°C in a 5% CO2 humidified incubator.

Cells are seeded in 96-well plates at 40,000 cells/well (pS6RP S240/244 assay) or 80,000 cells/well (pAkt S473 assay) in 90 µl growth media (DMEM, 2% FCS). Plates are incubated for 1 hour in a humidified incubator to allow the cells to adhere. Cells are treated with 8 concentrations of test compounds or DMSO alone for controls (final DMSO concentration 0.1%) and incubated at 37°C for 2 hours. Then 20µl of 5x concentrated lysis buffer (750mM NaCl, 100mM Tris pH7.4, 5mM ADTA, 5mM EGTA, 5% Triton X-100) is added, plates are sealed and incubated for 15 minutes at 4°C with gentle shaking. After cell lysis, 25µl cell lysate is transferred to a MesoScale plate coated with an antibody to pS6RP Ser240/244 (MesoScale Discovery K150DGD-3) or an antibody to pAkt Ser 473 (MesoScale Discovery K151DGD-3). Plates have been blocked before by incubation with 150µl MesoScale Discovery Blocking Solution-A for 1 hour at room temperature followed by washing with 150µl 1x Tris wash buffer per well. After the transfer of the cell lysate to the MSD plate, the pS6RP (or pAkt) protein is captured on the coated antibody by incubation at room temperature for 1 hour with gentle shaking. After the capture step the plate is washed three times with 150µl of 1x Tris wash buffer per well. Then 25µl detection antibody conjugated with a Sulfo-Tag is added and incubated for 1 hour at room temperature with gentle shaking. Subsequently the antibody solution is removed and the plate is washed 3 times with 150µl 1x Tris wash buffer per well and 150µl Read buffer is added. The plates are analysed on a MSD 2400 Plate Reader (MesoScale Discovery). Data analysis is performed using nonlinear regression for a sigmoidal dose-response with a variable slope.

**Claims**

1. A compound of formula (I)
or a pharmaceutically acceptable salt thereof, wherein

m is 1; or 2;

n is 1; 2; 3; or 4;

Each R1 is independently selected from the group consisting of H; halogen; CN; C(O)OR2; OR2; oxo (=O); C(O)R2; C(O)N(R2R2a); S(O)2N(R2R2a); S(O)N(R2R2a); S(O)R2; S(O2)N(R2R2a); N(R2)S(O)N(R2R2a); N(R2)S(O)R2; SR2; N(R2)2; NO2; OC(O)R2; N(R2)C(O)R2a; N(R2)S(O)R2a; N(R2)C(O)N(R2aR2b); N(R2)C(O)OR2a; OC(O)N(R2R2a); and C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more R3, which are the same or different;

 Optionally two R1 are joined to form together with the ring to which they are attached an 8 to 11 membered heterocycle;

R2, R2a, R2b are independently selected from the group consisting of H; C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

R3 is halogen; CN; C(O)OR4; OR4; C(O)R4; C(O)N(R4R4a); S(O)2N(R4R4a); S(O)N(R4R4a); S(O)R4; N(R4)S(O)N(R4aR4b); N(R4)S(O)2N(R4aR4b); N(R4)S(O)2R4; N(R4)R4a; N(R4)C(O)R4a; N(R4)S(O)2R4a; N(R4)S(O)R4a; N(R4)C(O)N(R4aR4b); N(R4)C(O)OR4a; or OC(O)N(R4R4a);

R4, R4a, R4b are independently selected from the group consisting of H; and C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

T0 is phenyl; or 5 to 6 membered aromatic heterocycle, wherein T0 is substituted with N(R5a)C(O)N(R5bR5) or N(R5a)C(O)OR5 and optionally further substituted with one or more R6, which are the same or different;

R6 is halogen; CN; C(O)OR7; OR7; C(O)R7; C(O)N(R7R7a); S(O)2N(R7R7a); S(O)N(R7R7a); S(O)R7; N(R7)S(O)N(R7aR7b); N(R7)S(O)2N(R7aR7b); S(R7); N(R7)2; NO2; OC(O)R7; N(R7)C(O)R7a; N(R7)S(O)2R7a; N(R7)S(O)R7a; N(R7)C(O)N(R7aR7b); N(R7)C(O)OR7a; OC(O)N(R7R7a); or C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

R7, R7a, R7b are independently selected from the group consisting of H; and C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

R5 is H; T2; and C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

R8 is halogen; CN; C(O)OR9; OR9; C(O)R9; C(O)N(R9R9a); S(O)2N(R9R9a); S(O)N(R9R9a); S(O)R9; N(R9)S(O)N(R9aR9b); N(R9)S(O)2N(R9aR9b); N(R9)S(O)R9; N(R9)R9a; N(R9)C(O)R9a; N(R9)S(O)2R9a; N(R9)S(O)R9a; N(R9)C(O)N(R9aR9b); N(R9)C(O)OR9a; or R9;

T2 is C3-7 cycloalkyl; 4 to 7 membered heterocyclyl; 8 to 11 membered heterobicyclyl; phenyl; or naphthyl; indienyl; or indanyl, wherein T2 is optionally substituted with one or more R10, which are the same or different;

R9, R9a, R9b are independently selected from the group consisting of H; and C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

Optional T2 is C3-7 cycloalkyl; 4 to 7 membered heterocyclyl; 8 to 11 membered heterobicyclyl; phenyl; or naphthyl; indienyl; or indanyl, wherein T2 is optionally substituted with one or more R10, which are the same or different;

R10 is halogen; CN; C(O)OR11; OR11; oxo (=O), where the ring is at least partially saturated; C(O)R11; C(O)N(R11R11a); S(O)2N(R11R11a); S(O)N(R11R11a); S(O)R11; S(O2)N(R11R11a); S(O)N(R11R11a); S(O)R11; S(O2)N(R11aR11b); N(R11)S(O)N(R11aR11b); S(R11); N(R11)2; NO2; OC(O)R11; N(R11)C(O)R11a; N(R11)S(O)R11a; N(R11)C(O)N(R11aR11b); N(R11)C(O)OR11a; OC(O)N(R11R11a); or C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more R12, which are the same or different;

T14, R11a, R11b are independently selected from the group consisting of H; C1-6 alkyl, wherein C1-6 alkyl is optionally substituted with one or more halogen, which are the same or different;

R12 is halogen; CN; C(O)OR13; OR13; C(O)R13; C(O)N(R13R13a); S(O)2N(R13R13a); S(O)N(R13R13a); S(O)R13; N(R13)S(O)N(R13aR13b); N(R13)S(O)R13a; N(R13)C(O)R13a; N(R13)C(O)OR13a; or
OC(O)N(R^{13}R^{13a});
R^{13}, R^{13a}, R^{13b} are independently selected from the group consisting of H; and C_{1-6} alkyl, wherein C_{1-6} alkyl is optionally substituted with one or more R^{15}, which are the same or different;
T^{1} is phenyl; or 5 to 6 membered aromatic heterocycle, wherein T^{1} is substituted with S(O)N(R^{14a}R^{14}), S(O)_{2}N(R^{14a}R^{14}); S(O)R^{14}, S(O)_{2}R^{14} and optionally further substituted with one or more R^{15}, which are the same or different;
R^{15} is halogen; CN; C(O)OR^{16}; OR^{16}; C(O)R^{16}; C(O)N(R^{16}R^{16a}); S(O)_{2}N(R^{16}R^{16a}); S(O)R^{16}; S(O)_{2}R^{16}; N(R^{16})S(O)_{2}N(R^{16a}R^{16b}); N(R^{16})S(O)N(R^{16a}R^{16b});
R^{16} is halogen; CN; C(O)OR^{16}; OR^{16}; C(O)R^{16}; C(O)N(R^{16}R^{16a}); S(O)_{2}N(R^{16}R^{16a}); S(O)R^{16}; S(O)_{2}R^{16}; N(R^{16})S(O)_{2}N(R^{16a}R^{16b}); N(R^{16})S(O)N(R^{16a}R^{16b});
R^{15} is halogen; CN; C(O)OR^{16}; OR^{16}; C(O)R^{16}; C(O)N(R^{16}R^{16a}); S(O)_{2}N(R^{16}R^{16a}); S(O)R^{16}; S(O)_{2}R^{16}; N(R^{16})S(O)_{2}N(R^{16a}R^{16b}); N(R^{16})S(O)N(R^{16a}R^{16b});
C_{1-6} alkyl, wherein C_{1-6} alkyl is optionally substituted with one or more R^{15}, which are the same or different;
R^{14a}, R^{16}, R^{16a}, R^{16b} are independently selected from the group consisting of H; C_{1-6} alkyl, wherein C_{1-6} alkyl is optionally substituted with one or more R^{15}, which are the same or different; R^{14} is C_{1-6} alkyl, which is optionally substituted with one or more halogen, which are the same or different; or an unsubstituted 4 to 7 membered heterocyclyl ring.

2. A compound of claim 1, wherein n is 1 or 2.

3. A compound of any one of claims 1 or 2, wherein R^{1} is unsubstituted C_{1-6} alkyl; or C_{1-6} alkyl substituted with one R^{2}.

4. A compound of any one of claims 1 to 3, wherein two R^{1} are joined to form together with the ring to which they are attached an 8-oxa-3-azabicyclo[3.2.1]octan-3-yl or an 3-oxa-8-azabicyclo[3.2.1]octan-8-yl ring.

5. A compound of any one of claims 1 to 4, wherein T^{0} is phenyl, wherein T^{0} is substituted with N(R^{5a})C(O)N(R^{5b}R^{5}) or N(R^{5a})C(O)OR^{5} and optionally further substituted with one or more R^{6}, which are the same or different.

6. A compound of any one of claims 1 to 5, wherein R^{5} is T^{2}, wherein T^{2} is optionally substituted with one or more R^{10}, which are the same or different and wherein T^{2} is phenyl; pyridyl; cyclopentyl; cyclobutyl; cycohexyl; oxetanyl; or tetrahydrofuranyl.

7. A compound of any one of claims 1 to 6, wherein R^{5} is unsubstituted C_{1-6} alkyl or R^{5} is C_{1-6} alkyl substituted with one or more R^{6}, which are the same or different and selected from the group consisting of F; OR^{9}; and N(R^{9}R^{9a}).

8. A compound of any one of claims 1 to 7, wherein T^{1} is phenyl or pyridyl and wherein T^{1} is substituted with S(O)N(R^{14a}R^{14}), S(O)_{2}N(R^{14a}R^{14}); S(O)R^{14}, S(O)_{2}R^{14} and optionally further substituted with one or more R^{15}, which are the same or different.

9. A compound of any one of claims 1 to 8, wherein R^{14} is methyl; or ethyl.

10. A compound of any one of claims 1 to 9, wherein in formula (I) T^{0} and T^{1} are selected to give formula (Ia)

wherein X is CH or N, o is 0 or 1 and n, m, R^{1}, R^{5}, R^{14}, R^{15} have the meaning as indicated in any one of claims 1 to 9.

11. A compound of any one of claims 1 to 10 or a pharmaceutically acceptable salt thereof, wherein the compound is selected from the group consisting of

(S)-1-cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-((2-hydroxyethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-cyclopropyl-3-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-(2-hydroxyethyl)urea;
(S)-1-(2-fluoroethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(2,2-difluoroethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-((3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(oxetan-3-yl)urea;
(S)-1-ethyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
1-(4-(4-(8-oxa-3-azabicyclo[3.2.1]octan-3-yl)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-cyclopropylurea;
1-cyclopropyl-3-(4-(4-(2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-methyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-isopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
1-(4-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(oxetan-3-yl)urea;
(S)-1-cyclopropyl-3-(4-(4-(2-(ethylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-propylurea;
(S)-1-isobutyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)urea;
1-(4-(4-(3-oxa-8-azabicyclo[3.2.1]octan-8-yl)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-cyclopropylurea;
(S)-1-cyclopropyl-3-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea;
(S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-neopentylurea;
(S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(3,3,3-trifluoropropyl)urea;
(S)-1-(4-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(tetrahydrofuran-3-yl)urea;
(S)-1-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(3,3,3-trifluoro-3-hydroxypropyl)urea;
(S)-1-(4-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(4,4,4-trifluorobutyl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(4,4,4-trifluorobutyl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(octan-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(2,2,2-trifluoroethyl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(tetrahydrofuran-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(4,4,4-trifluorobutyl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(4,4,4-trifluorobutyl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(octan-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(fluorine-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(octan-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(fluorine-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(octan-3-yl)urea;
(S)-1-(4-((S)-3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-(fluorine-3-yl)urea;
(S)-1-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylurea;
(S)-1-(2,2-difluoroethyl)-3-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)urea; and
(S)-1-(4-(4-(5-fluoro-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-(2-fluoroethyln)-urea.

12. A pharmaceutical composition comprising a compound or a pharmaceutically acceptable salt thereof of any one of the claims 1 to 11 together with a pharmaceutically acceptable carrier, optionally in combination with one or more other pharmaceutical compositions.

13. A compound or a pharmaceutically acceptable salt thereof of any one of claims 1 to 11 for use as a medicament.

14. A compound or a pharmaceutically acceptable salt thereof of any one of claims 1 to 11 for use in a method of treating or preventing a disease or disorder associated with mTOR.

15. A compound or a pharmaceutically acceptable salt thereof of any one of claims 1 to 11 for use in a method of treating or preventing a viral infection, an autophagy associated disease, a cardiovascular disease, a metabolic disease a neurodegenerative disease, a proliferative disease, an immunological, inflammatory, autoimmune, or allergic disorder or disease or a transplant rejection or a Graft-versus host disease.

Patentansprüche

1. Verbindung der Formel (I)

oder ein pharmazeutisch annehmbares Salz davon, worin

m 1 oder 2 ist;

n 1, 2, 3 oder 4 ist;

die jedes R1 unabhängig ausgewählt ist aus der Gruppe bestehend aus H; Halogen; CN; C(O)OR2; OR2a; Oxo (=O); C(O)R2; C(O)N(R2R2a); S(O)2N(R2R2a); S(O)N(R2R2a); S(O)2R2; S(O)R2; N(R2)S(O)2N(R2R2a); N(R2)S(O)N(R2R2a); SR2; N(R2R2a); NO2; OC(O)R2; N(R2)C(O)R2a; N(R2)S(O)2R2a; N(R2)S(O)R2a; N(R2)C(O)N(R2R2a); N(R2)C(O)OR2a; OC(O)N(R2R2a) und C1-6-Alkyl, wobei das C 1-6-Alkyl gegebenenfalls mit einem oder mehreren R3, die gleich oder verschieden sind, substituiert ist;

die gegebenenfalls zwei R1 verbunden sind, um zusammen mit dem Ring, an den sie gebunden sind, einen 8- bis 11-gliedrigen Heterobicyclus zu bilden;

R2, R2a, R2b unabhängig aus der Gruppe bestehend aus H und C1-6-Alkyl ausgewählt sind, wobei das C1-6-Alkyl gegebenenfalls mit einer oder mehreren Halogene, die gleich oder verschieden sind, substituiert ist;

R3 Halogen; CN; C(O)OR4; OR4; C(O)R4; C(O)N(R4R4a); S(O)2N(R4R4a); S(O)N(R4R4a); S(O)2R4; S(O)R4; N(R4)S(O)2N(R4aR4b); N(R4)S(O)N(R4aR4b); SR4; N(R4R4a); NO2; OC(O)R4; N(R4)C(O)R4a; N(R4)S(O)2R4a; N(R4)S(O)R4a; N(R4)C(O)N(R4aR4b); N(R4)C(O)OR4a oder OC(O)N(R4R4a) ist;

R4, R4a, R4b unabhängig aus der Gruppe bestehend aus H und C1-6-Alkyl ausgewählt sind, wobei das C1-6-Alkyl gegebenenfalls mit einer oder mehreren Halogene, die gleich oder verschieden sind, substituiert ist;

T0 Phenyl oder ein 5- bis 6-gliedriger aromatischer Heterocyclus ist, wobei T0 mit N(R5a)C(O)N(R5bR5) oder N(R5a)C(O)OR5 substituiert ist und ferner gegebenenfalls mit einem oder mehreren R6, die gleich oder verschieden sind, substituiert ist;

R5 Halogen; CN; C(O)OR7; OR7; C(O)R7; C(O)N(R7R7a); S(O)2N(R7R7a); S(O)N(R7R7a); S(O)2R7; S(O)R7;
N(R^7)S(O)N(R^{7a}R^{7b}); N(R^7)S(O)N(R^{7a}R^{7b}); SR^7; N(R^7C(O)R^{7a}; N(R^7)S(O)R^{7a}; N(R^7)C(O)N(R^{7a}R^{7b}); N(R^7C(O)OR^{7a}; OC(O)N(R^7R^{7a}) oder C_{1-6}-Alkyl ist, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; R^{5a}, R^{5b}, R^7, R^{7a}, R^{7b} unabhängig aus der Gruppe bestehend aus H und C_{1-6}-Alkyl ausgewählt sind, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; R^5 H; T^2 und C_{1-6}-Alkyl ist, wobei das C_{1-6}-Alkyl gegebenenfalls mit einem oder mehreren R^8, die gleich oder verschieden sind, substituiert ist; R^8 Halogen; CN; C(O)OR^9; OR^9; C(O)R^9; C(O)N(R^9R^{9a}); S(O)N(R^9R^{9a}); S(O)N(R^9R^{9a}); S(O)OR^9; S(O)R^9; N(R^9)S(O)N(R^{9a}R^{9b}); S(O)N(R^9R^{9a}); NO^2; OC(O)R^9; N(R^9)C(O)R^{9a}; N(R^9)S(O)R^{9a}; N(R^9)S(O)N(R^{9a}R^{9b}); N(R^9)C(O)N(R^{9a}R^{9b}); N(R^9)C(O)OR^{9a}; OC(O)N(R^9R^{9a}) oder T^2 ist; R^8, R^9 unabhängig aus der Gruppe bestehend aus H und C_{1-6}-Alkyl ausgewählt sind, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; R^5 und R^{5b} gegebenenfalls verbunden sind, um zusammen mit dem Stickstoffatom, an das sie gebunden sind, einen zumindest das Stickstoffatom als Ringheteroatom enthaltenden 4- bis 7-gliedrigen Heterocycliring oder 8- bis 11-gliedrigen Heterobicycliring zu bilden, wobei der 4- bis 7-gliedrige Heterocycliring und der 8- bis 11-gliedrige Heterobicycliring gegebenenfalls mit einem oder mehreren R^{10}, die gleich oder verschieden sind, substituiert sind; T^2 C_{3-7}-Cycloalkyl; 4- bis 7-gliedriges Heterocycl; 8-bis 11-gliedriges Heterobicycl; Phenyl; Naphthyl; Indenyl oder Indanyl ist, wobei T^2 gegebenenfalls mit einem oder mehreren R^{10}, die gleich oder verschieden sind, substituiert ist; R^{10} Halogen; CN; C(O)OR^{11}; OR^{11}; Oxo (=O), wobei der Ring zumindest teilweise gesättigt ist; C(O)R^{11}; C(O)N(R^{11}R^{11a}); S(O)N(R^{11}R^{11a}); S(O)N(R^{11}R^{11a}); S(O)_2R^{11}; S(O)N(R^{11})S(O)R^{11}; N(R^{11})S(O)N(R^{11}R^{11b}); SR^{11}; N(R^{11}R^{11a}); NO^2; OC(O)R^{11}; N(R^{11})C(O)R^{11a}; N(R^{11})C(O)OR^{11a}; N(R^{11})S(O)R^{11a}; N(R^{11})S(O)N(R^{11}R^{11b}); N(R^{11})S(O)N(R^{11}R^{11a}); N(R^{11})C(O)N(R^{11}R^{11a}) oder C_{1-6}-Alkyl ist, wobei das C_{1-6}-Alkyl gegebenenfalls mit einem oder mehreren R^{12}, die gleich oder verschieden sind, substituiert ist; R^{11}, R^{11a}, R^{11b} unabhängig aus der Gruppe bestehend aus H und C_{1-6}-Alkyl ausgewählt sind, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; R^{12} Halogen; CN; C(O)OR^{13}; OR^{13}; C(O)R^{13}; C(O)N(R^{13}R^{13a}); S(O)N(R^{13}R^{13a}); S(O)N(R^{13}R^{13a}); S(O)_2R^{13}; S(O)N(R^{13})S(O)R^{13}; S(O)N(R^{13})S(O)R^{13}; N(R^{13})S(O)N(R^{13}R^{13b}); SR^{13}; N(R^{13}R^{13a}); NO^2; OC(O)R^{13}; N(R^{13})C(O)R^{13a}; N(R^{13})S(O)N(R^{13}R^{13b}); N(R^{13})C(O)N(R^{13}R^{13a}) oder OC(O)N(R^{13}R^{13a}) ist; R^{13}, R^{13a}, R^{13b} unabhängig aus der Gruppe bestehend aus H und C_{1-6}-Alkyl ausgewählt sind, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; T^1 Phenyl oder ein 5- bis 6-gliedriger aromatischer Heterocyclus ist, wobei T^1 mit S(O)N(R^{14}R^{14a}); S(O)_2N(R^{14}R^{14a}) substituiert und gegebenenfalls ferner mit einem oder mehreren R^{15}, die gleich oder verschieden sind, substituiert ist; R^{15} Halogen; CN; C(O)OR^{16}; OR^{16}; C(O)R^{16}; C(O)N(R^{16}R^{16a}); S(O)N(R^{16}R^{16a}); S(O)N(R^{16}R^{16a}); S(O)R^{16}; S(O)_2R^{16}; N(R^{16})S(O)N(R^{16}R^{16a}); N(R^{16})S(O)N(R^{16}R^{16a}); SR^{16}; N(R^{16}R^{16a}); NO^2; OC(O)R^{16}; N(R^{16})C(O)R^{16a}; N(R^{16})S(O)R^{16a}; N(R^{16})S(O)R^{16a}; OC(O)N(R^{16}R^{16a}) oder C_{1-6}-Alkyl ist, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; R^{14a}, R^{16} und R^{16a} unabhängig aus der Gruppe bestehend aus H und C_{1-6}-Alkyl ausgewählt sind, wobei das C_{1-6}-Alkyl gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; R^{14} C_{1-6}-Alkyl, das gegebenenfalls mit einer oder mehreren Halogengruppen, die gleich oder verschieden sind, substituiert ist; oder ein unsubstituierter 4- bis 7-gliedriger Heterocycliring ist.

2. Verbindung gemäß Anspruch 1, worin n 1 oder 2 ist.

3. Verbindung gemäß irgendeinem der Ansprüche 1 oder 2, worin R^1 unsubstituiertes C_{1-6}-Alkyl oder mit einem R^3 substituiertes C_{1-6}-Alkyl ist.

4. Verbindung gemäß irgendeinem der Ansprüche 1 bis 3, wobei zwei R^1 verbunden sind, um zusammen mit dem Ring, an den sie gebunden sind, einen 8-Oxa-3-azabicyclo[3.2.1]octan-3-yl- oder einen 3-Oxa-8-azabicyclo[3.2.1]octan-8-yl-Ring zu bilden.
5. Verbindung gemäß irgendeinem der Ansprüche 1 bis 4, worin T⁰ Phenyl ist, wobei T⁰ mit N(R⁵ₐ)C(O)N(R⁵ₐR⁵₉) oder N(R⁵ₐ)C(O)OR⁵ substituiert ist und gegebenenfalls ferner mit einem oder mehreren R⁶, die gleich oder verschieden sind, substituiert ist.

6. Verbindung gemäß irgendeinem der Ansprüche 1 bis 5, worin R⁵ T² ist, wobei T² gegebenenfalls mit einem oder mehreren R¹⁰, die gleich oder verschieden sind, substituiert ist und worin T² Phenyl; Pyridyl; Cyclopropyl; Cyclobutyl; Cyclopentyl; Cyclohexyl; Oxetanyl oder Tetrahydrofuranyl ist.

7. Verbindung gemäß irgendeinem der Ansprüche 1 bis 6, worin R⁵ unsubstituiertes C₁₋₆-Alkyl ist oder R⁵ C₁₋₆-Alkyl ist, das mit einem oder mehreren R⁸, die gleich oder verschieden sind, substituiert ist und aus der Gruppe bestehend aus F; OR⁹ und N(R⁹R⁹ₐ) ausgewählt ist.

8. Verbindung gemäß irgendeinem der Ansprüche 1 bis 7, worin T¹ Phenyl oder Pyridyl ist und wobei T¹ mit S(O)N(R¹₄ₐR¹₄), S(O)₂N(R¹₄ₐR¹₄), S(O)R¹₄ und S(O)₂R¹₄ substituiert ist und gegebenenfalls ferner mit einem oder mehreren R¹₅, die gleich oder verschieden sind, substituiert ist.

9. Verbindung gemäß irgendeinem der Ansprüche 1 bis 8, worin R¹₄ Methyl oder Ethyl ist.

10. Verbindung gemäß irgendeinem der Ansprüche 1 bis 9, wobei in Formel (I) T⁰ und T¹ so ausgewählt sind, um die Formel (Ia) zu erhalten:

![Image](https://example.com/image.png)

worin X CH oder N ist, o 0 oder 1 ist und n, m, R¹, R⁵, R¹₄ und R¹₅ die Bedeutungen haben, wie in irgendeinem der Ansprüche 1 bis 9 angegeben.

11. Verbindung gemäß irgendeinem der Ansprüche 1 bis 10 oder ein pharmazeutisch annehmbares Salz davon, wobei die Verbindung ausgewählt ist aus der Gruppe bestehend aus:

(S)-1-Cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-phenyl)-harnstoff;  
(S)-1-(2-Hydroxyethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-phenyl)-harnstoff;  
(S)-1-Cyclopropyl-3-(4-(4-(3-fluor-2-(methylsulfonyl)phenyl)-phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)-phenyl)-harnstoff;  
(S)-1-(4-(4-(3-fluor-2-(methylsulfonyl)phenyl)-phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)-phenyl)-3-(2-hydroxyethyl)-harnstoff;  
(S)-1-(2,2-Difluorethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-phenyl)-harnstoff;  
(S)-1-(2,2-Difluorethyl)-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-phenyl)-3-(oxetan-3-yl)-harnstoff;  
(S)-1-Ethyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)-phenyl)-harnstoff;  
1-(4-(4-(8-Oxa-3-azabicyclo[3.2.1]octan-3-yl)-octan-3-yl)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-cyclopropyl-harnstoff;  
1-Cyclopropyl-3-(4-(4-(2-(methylsulfonyl)phenyl)-6-morpholino-1,3,5-triazin-2-yl)-phenyl)-harnstoff;
(R)-1-Cyclopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-harnstoff;
(S)-1-Methyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-harnstoff;
(S)-1-Isopropyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-harnstoff;
1-(4-(4-(3-Oxa-8-azabicyclo[3.2.1]octan-8-yl)-6-(2-(methylsulfonyl)phenyl)-1,3,5-triazin-2-yl)phenyl)-3-cyclopropylharnstoff;
(S)-1-Cyclopropyl-3-(4-(2-(ethylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-harnstoff;
(S)-1-(4-(4-(3-Methylmorpholino)-6-(2-(methylsulfonyl)-phenyl)-1,3,5-triazin-2-yl)phenyl)-3-propylharnstoff;

(S)-1-Methyl-3-(4-(4-(3-methylmorpholino)-6-(2-(methylsulfonyl)pyridin-3-yl)-1,3,5-triazin-2-yl)phenyl)-harnstoff;
(S)-1-Ethyl-3-(4-(4-(5-fluor-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-harnstoff;
(S)-1-(4-(4-(5-Fluor-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-methylharnstoff;
EP 2 758 379 B1

(S)-1-(2,2-Difluorethyl)-3-(4-(4-(5-fluor-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)harnstoff und
(S)-1-(4-(4-(5-Fluor-2-(methylsulfonyl)phenyl)-6-(3-methylmorpholino)-1,3,5-triazin-2-yl)phenyl)-3-(2-fluorethyl)harnstoff.

13. Verbindung oder ein pharmazeutisch annehmbares Salz davon gemäss irgendeinem der Ansprüche 1 bis 11 zur Verwendung als Arzneimittel.

14. Verbindung oder ein pharmazeutisch annehmbares Salz davon gemäss irgendeinem der Ansprüche 1 bis 11 zur Verwendung in einem Verfahren zur Behandlung oder Prävention einer Erkrankung oder Störung, die mit mTOR assoziiert ist.

Revendications

1. Composé de formule (I)

ou un sel pharmaceutiquement acceptable de celui-ci, dans laquelle :

m représente 1 ; ou 2 ;
n représente 1 ; 2 ; 3 ; ou 4 ;
chaque R1 est indépendamment choisi dans le groupe consistant en H ; un halogène ; CN ; C(O)OR2 ; OR2a ;
pxox (=O) ; C(O)R2 ; C(O)N(R2R2a) ; S(O)2N(R2R2a) ; S(O)N(R2R2a) ; S(O)2R2 ; S(O)R2 ; N(R2)S(O)2N(R2R2a) ;
N(R2)S(O)N(R2R2a) ; SR2 ; N(R2)R2 ; NO2 ; OC(O)R2 ; N(R2)C(O)R2a ; N(R2)S(O)2R2a ; N(R2)S(O)R2a ;
N(R2)C(O)N(R2R2a) ; N(R2)C(O)OR2a ; OC(O)N(R2)2 ; et un alkyle en C1 à C6, dans lesquels un alkyle en
C1 à C6 est éventuellement substitué par un ou plusieurs R3, qui sont identiques ou différents ;
Éventuellement, deux R1 sont reliés pour former, ensemble avec le cycle auquel ils sont liés, un hétérobicycle ayant de 8 à 11 chaînons ;
R2, R2a, R2b sont indépendamment choisis dans le groupe consistant en H ; un alkyle en C1 à C6, dans lesquels un alkyle en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ;
R3 représente un halogène ; CN ; C(O)OR4 ; OR4 ; 1C(O)R4 ; C(O)N(R4R4a) ; S(O)2N(R4R4a) ; S(O)N(R4R4a) ;
S(O)2R4 ; S(O)R4 ; N(R4)S(O)2N(R4R4a) ; N(R4)S(O)N(R4R4a) ; SR4 ; N(R4)R4 ; NO2 ; OC(O)R4 ;
N(R4)C(O)R4a ; N(R4)S(O)2R4a ; N(R4)S(O)R4a ; N(R4)C(O)N(R4R4a) ; N(R4)C(O)OR4a ; ou OC(O)N(R4R4a) ;
R4, R4a, R4b sont indépendamment choisis dans le groupe consistant en H ; et un alkyle en C1 à C6, dans lesquels un alkyle en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ;
T0 représente un phényle ; ou un hétérocycle aromatique ayant de 5 à 6 chaînons, dans lequel T0 est substitué par
N(R5)C(O)N(R5pR5) ou N(R5p)C(O)OR5 et éventuellement encore substitué par un ou plusieurs R6, qui sont identiques ou différents ;
R6 représente un halogène ; CN ; C(O)OR7 ; OR7 ; C(O)R7 ; C(O)N(R7R7a) ; S(O)2N(R7R7a) ; S(O)R7 ; S(O)R7 ; N(R7)S(O)N(R7aR7b) ; N(R7)S(O)N(R7R7b) ; SR7 ; N(R7R7a) ; NO2 ; OC(O)R7 ; N(R7)C(O)R7a ; N(R7)S(O)R7a ; N(R7)S(O)N(R7aR7b) ; N(R7)S(O)N(R7R7a) ; ou un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R5a, R5b, R7, R7a, R7b sont indépendamment choisis dans le groupe consistant en H ; un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R5 représente H ; T2 ; et un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs R8, qui sont identiques ou différents ; R6 représente H ; T2 ; et un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; Éventuellement, R5, R5b sont reliés pour former, ensemble avec l’atome d’azote auquel ils sont liés, un noyau hétérocyclique ayant de 4 à 7 chaînons contenant au moins l’atome d’azote utilisé comme hétéroatome du cycle ; ou un noyau hétérobicyclique ayant de 8 à 11 chaînons, dans lesquels le noyau hétérocyclique ayant de 4 à 7 chaînons, et le noyau hétérobicyclique ayant de 8 à 11 chaînons sont éventuellement substitués par un ou plusieurs R10, qui sont identiques ou différents ; T2 représente un cycloalkyle en C3 à C7 ; un hétérocycle ayant de 4 à 7 chaînons ; un hétérobicycle ayant de 8 à 11 chaînons ; un phényle ; un naphtyle ; un indényle ; ou un indanyle, dans lesquels T2 est éventuellement substitué par un ou plusieurs R10, qui sont identiques ou différents ; R10 représente un halogène ; CN ; C(O)OR11 ; OR11 ; oxo (=0), dans lesquels le cycle est au moins en partie saturé ; C(O)R11 ; C(O)N(R11R11a) ; S(O)2N(R11R11a) ; S(O)2R11 ; S(O)R11 ; N(R11)S(O)N(R11aR11b) ; N(R11)S(O)N(R11R11b) ; SR11 ; N(R11R11a) ; NO2 ; OC(O)R11 ; N(R11)C(O)R11a ; N(R11)S(O)2R11a ; N(R11)S(O)R11a ; N(R11)C(O)R11a ; ou un alkyle en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R11, R11a, R11b sont indépendamment choisis dans le groupe consistant en H ; un phényl ; un naphthyl ; un indène ; ou un indanyle, dans lesquels T2 est éventuellement substitué par un ou plusieurs R12, qui sont identiques ou différents ; R11, R11a, R11b sont indépendamment choisis dans le groupe consistant en H ; un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R12 représente un halogène ; CN ; C(O)OR13 ; OR13 ; oxo (=0), dans lesquels le cycle est au moins en partie saturé ; C(O)R13 ; C(O)N(R13R13a) ; S(O)2N(R13R13a) ; S(O)2R13 ; S(O)R13 ; N(R13)S(O)N(R13aR13b) ; N(R13)S(O)N(R13R13b) ; SR13 ; N(R13)R13a ; NO2 ; OC(O)R13 ; N(R13)C(O)R13a ; N(R13)S(O)2R13a ; N(R13)S(O)R13a ; N(R13)C(O)N(R13aR13b) ; N(R13)C(O)N(R13aR13b) ; ou un alkyle en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R13, R13a, R13b sont indépendamment choisis dans le groupe consistant en H ; et un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; T1 représente un phényl ; ou un hétérocyclique ayant de 5 à 6 chaînons, dans lesquels T1 est substitué par S(O)2N(R14aR14b) ; S(O)2N(R14aR14b) ; S(O)2N(R14aR14b) ; S(O)2N(R14aR14b) ; et éventuellement encore substitué par un ou plusieurs R15, qui sont identiques ou différents ; R14 représente un alkyle en C1 à C6, qui est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R14a, R14b, R14c sont indépendamment choisis dans le groupe consistant en H ; un alkyne en C1 à C6, dans lesquels un alkyne en C1 à C6 est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; R14 représente un alkyne en C1 à C6, qui est éventuellement substitué par un ou plusieurs halogènes, qui sont identiques ou différents ; ou un noyau hétérocyclique ayant de 4 à 7 chaînons non substitué.
substitué ; ou un alkyle en C₁ à C₆ substitué par un R³.

4. Composé selon l’une quelconque des revendications 1 à 3, dans lequel deux R¹ sont reliés pour former, ensemble avec le cycle auquel ils sont liés, un noyau 8-oxa-3-azabicyclo[3.2.1]octan-3-yle ou un noyau 3-oxa-8-azabicyclo[3.2.1]octan-8-yle.

5. Composé selon l’une quelconque des revendications 1 à 4, dans lequel T⁰ représente un phényle, dans lequel T⁰ est substitué par N(R⁵a)C(O)N(R⁵bR⁵) ou N(R⁵bR⁵)C(O)OR⁵ et éventuellement encore substitué par un ou plusieurs R⁶, qui sont identiques ou différents.

6. Composé selon l’une quelconque des revendications 1 à 5, dans lequel R⁵ représente T², dans lequel T² est éventuellement substitué par un ou plusieurs R¹⁰, qui sont identiques ou différents, et dans lequel T² représente un phényle ; un pyridyle ; un cyclopropyle ; un cyclobutyle ; un cyclopentyle ; un cyclohexyle ; un oxétanyle ; ou un tétrahydrofuranyle.

7. Composé selon l’une quelconque des revendications 1 à 6, dans lequel R⁵ représente un alkyle en C₁ à C₆ non substitué ou R⁵ représente un alkyle en C₁ à C₆ substitué par un ou plusieurs R⁸, qui sont identiques ou différents et sont choisis dans le groupe consistant en F ; OR⁹ ; et N(R⁹R⁹a).

8. Composé selon l’une quelconque des revendications 1 à 7, dans lequel T¹ représente un phényle ou un pyridyle et dans lequel T¹ est substitué par S(O)N(R¹⁴aR¹⁴), S(O)₂N(R¹⁴aR¹⁴), S(O)R¹⁴, S(O)₂R¹⁴ et est éventuellement encore substitué par un ou plusieurs R¹⁵, qui sont identiques ou différents.

9. Composé selon l’une quelconque des revendications 1 à 8, dans lequel R¹⁴ représente un méthyle ; ou un éthyle.

10. Composé selon l’une quelconque des revendications 1 à 9, dans lequel, dans la formule (1), T⁰ et T¹ sont choisis pour obtenir la formule (Ia) :

   ![Formule (Ia)](image.png)

dans laquelle X représente CH ou N, o représente 0 ou 1 et n, m, R¹, R⁵, R¹⁴, R¹⁵ sont tels que décrits dans l’une quelconque des revendications 1 à 9.

11. Composé selon l’une quelconque des revendications 1 à 10, ou un sel pharmaceutiquement acceptable de celui-ci, dans lequel le composé est choisi dans le groupe consistant en :

   une (S)-1-cyclopropyl-3-(4-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
   une (S)-1-(2-hydroxyéthyl)-3-(4-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
   une (S)-1-cyclopentyl-3-(4-(4-(5-fluoro-2-(méthylsulfonyl)phényl)-phényl)-6-(3-méthylmorpholino)-1,3,5-triazin-2-yl)phényl)urée ;
   une (S)-1-(4-(4-(5-fluoro-2-(méthylsulfonyl)phényl)-phényl)-6-(3-méthylmorpholino)-1,3,5-triazin-2-yl)phényl)urée ;
   une (S)-1-(2-fluoroéthyl)-3-(4-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
   une (S)-1-(2,2-difluoroéthyl)-3-(4-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
   une (S)-1-(4-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
une (S)-1-éthyl-3-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
une 1-(4-(4-((S)-3-méthylmorpholino)-6-(2-(méthylsulfonyl)pyridin-3-yl)-1,3,5-triazin-2-yl)phényl)urée ;
une 1-(4-(4-((S)-3-méthylmorpholino)-6-(2-(pyrrolidin-1-ylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
une (S)-1-cyclobutyl-3-(4-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
une 1-(4-(4-((S)-3-méthylmorpholino)-6-(2-(méthylsulfonyl)pyridin-3-yl)-1,3,5-triazin-2-yl)phényl)urée ;
une 1-(4-(4-((S)-3-méthylmorpholino)-6-(2-(méthylsulfonyl)pyridin-3-yl)-1,3,5-triazin-2-yl)phényl)urée ;
une 1-(4-(4-(5-fluoro-2-(méthylsulfonyl)phényl)-6-(3-méthylmorpholino)-1,3,5-triazin-2-yl)phényl)urée ;
une (S)-1-éthyl-3-(4-(3-éthylmorpholino)-6-(2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)urée ;
une 1-(4-(4-(8-oxa-3-azabicyclo[3.2.1]octan-3-yl)-6-(2-fluoro-2-(méthylsulfonyl)phényl)-1,3,5-triazin-2-yl)phényl)-3-cyclopropylurée ;
une (S)-1-éthyl-3-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)pyridin-3-yl)-1,3,5-triazin-2-yl)phényl)urée ;
une (S)-1-éthyl-3-(4-(3-méthylmorpholino)-6-(2-(méthylsulfonyl)pyridin-3-yl)-1,3,5-triazin-2-yl)phényl)urée ;
une (S)-1-(4-(4-(5-fluooro-2-(méthylsulfonyl)phényl)-6-(3-méthylmorpholino)-1,3,5-triazin-2-yl)phényl)-3-
méthylurée ;
une (S)-1-(2,2-difluoroéthyl)-3-(4-(4-(5-fluooro-2-(méthylsulfonyl)phényl)-6-(3-méthylmorpholino)-1,3,5-triazin-
2-yl)phényl)urée ;
et une (S)-1-(4-(4-(5-fluooro-2-(méthylsulfonyl)phényl)-6-(3-méthylmorpholino)-1,3,5-triazin-2-yl)phényl)-3-(2-
fluoroéthyl)urée.

12. Composition pharmaceutique comprenant un composé ou un sel pharmaceutiquement acceptable de celui-ci selon
l’une quelconque des revendications 1 à 11, conjointement avec un transporteur pharmaceutiquement acceptable,
éventuellement en association avec une ou plusieurs autres compositions pharmaceutiques.

13. Composé ou un sel pharmaceutiquement acceptable de celui-ci selon l’une quelconque des revendications 1 à 11,
destiné à être utilisé comme médicament.

14. Composé ou un sel pharmaceutiquement acceptable de celui-ci selon l’une quelconque des revendications 1 à 11,
destiné à être utilisé dans un procédé de traitement ou de prévention d’une maladie ou d’un trouble associé au mTOR.

15. Composé ou un sel pharmaceutiquement acceptable de celui-ci selon l’une quelconque des revendications 1 à 11,
destiné à être utilisé dans un procédé de traitement ou de prévention d’une infection virale, d’une maladie associée
à l’autophagie, d’une maladie cardiovasculaire, d’une maladie métabolique, d’une maladie neurodégénérative, d’une
maladie proliférative, d’un trouble ou d’une maladie immunologique, inflammatoire, auto-immune, ou allergique ou
d’un rejet de transplant ou d’une maladie de greffe contre hôte.
