
To all whom it may concern:

Be it known that I, William C. Putt, a citizen of the United States, residing Saginaw, in the county of Tarrant, State of Texas, have invented certain new and useful Improvements in Buggy-Top Supports and I do hereby declare the following to be my invention, such as will enable others to use the same.

The invention relates to vehicles having folding tops, and has for its object to provide a simple constructed attachment for safely supporting the top, and preventing injury thereto from the jars and jolts incident to the use of the vehicle upon rough roads.

The improved device may be applied to buggies, carriages, automobiles, or any vehicle having a folding top, but for the purpose of illustration is shown applied to a conventional form of vehicle seat.

With these and other objects in view, the invention consists in certain novel features of construction hereafter shown and described, and specifically pointed out in the claims, and in the drawings illustrating the preferred embodiment of the invention.

Figure 1 is an end view of a conventional form of vehicle seat and a portion of the folding top, with the improved attachment enlarged.

The improved device may be attached to any of the various forms of vehicle seats adapted to the various forms of folding in use without material structural change and for the purpose of illustration is attached to a conventional form of buggies.

The improved device consists of a resilient member formed in a U-shape with the sides of unequal length, the shorter side attached by screws or other fastening means to
