ABSTRACT

The objective of the invention is to eliminate the discomfort and potentially dangerous burning caused by the arms of outdoor furniture after prolonged exposure to the sun.
COVERS FOR ARMS OF PATIO FURNITURE

BRIEF DESCRIPTION

[0006] The present invention relates to covers for the arms of patio furniture/chairs. The invention is comprised of rectangular pieces of terrycloth, seventeen (17) inches in length by six (6) inches in width. Strips of Velcro®, a hook and loop fastener, seventeen (17) inches in length by one (1) inch in width. Thread to sew the strips of Velcro to the terrycloth. One side of the Velcro, the hook side of the hook and loop fastener, is sewn to the top of the piece of terrycloth along its seventeen (17) inch length. The other side of the piece of Velcro, the loop side of the hook and loop fastener, is sewn to the bottom of the opposite seventeen (17) inch side of the terrycloth rectangle. The dimensions of the cover and Velcro may vary in size based on demand. Also the cover may be identified as an arm towel.

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWINGS

[0007] FIG. 1: Is the illustration for the cover for the arms of patio chairs/furniture.

[0008] FIG. 2: Is the illustration of the covers attached to the arms of the patio chair/furniture

NUMBER DESCRIPTION LIST

[0009] 10: is the overall invention of the covers
[0010] 12: is the Velcro® strip sewn on top of the terrycloth
[0011] 14: is the Velcro strip sewn underneath of the terrycloth

[0012] 16: is the terrycloth

[0013] 18: is the patio furniture

DETAILED DESCRIPTION OF THE INVENTION

[0014] Rectangular pieces of terrycloth, seventeen (17) inches in length by six (6) inches in width. Strips of Velcro®, a hook and loop fastener, seventeen (17) inches in length by one (1) inch in width. Thread to sew the strips of Velcro to the terrycloth. One side of the Velcro, the hook side of the hook and loop fastener, is sewn to the top of the piece of terrycloth along its seventeen (17) inch length. The other side of the piece of Velcro, the loop side of the hook and loop fastener, is sewn to the bottom of the opposite seventeen (17) inch side of the terrycloth rectangle. The terrycloth rectangle is wrapped around the arm of the furniture/chairs and the two (2) sides of the Velcro, hook and loop fastener, are connected underneath the arm of the furniture, creating a sleeve, preventing the cloth from slipping off the arm of the furniture/chair. The cloth “sleeve” prevents the arm of the furniture/chair from direct and prolonged exposure to the sun. By preventing direct and prolonged exposure to the sun the cloth sleeves avoid discomfort and potentially dangerous burns caused by overheated exposed arms of outdoor furniture. The dimensions of the cover and Velcro may vary in size based on demand and be identified as an arm towel.

[0015] Other means of connecting the two ends of the terrycloth under the arms of the furniture may be used. For example, snaps, buttons, or zippers could be used to secure the two ends of the terrycloth together under the arms of the furniture, closing the “sleeve”, to prevent the cloth from slipping off the furniture. Also, the arm covers could be attached to a towel that would also cover the remainder of the piece of furniture.

1. A washable terrycloth cover for the arms of outdoor patio furniture/chairs.

A washable terrycloth cover for the arms of outdoor patio furniture/chairs comprised of Velcro, a hook and loop fastener, sewn onto the terrycloth, so that it does not slip off the arm of the furniture.

A washable terrycloth cover for the arms of outdoor patio furniture/chairs comprised of strips of Velcro, a hook and loop fastener, sewn onto the terrycloth cover allowing the covers achieve their objective because the terrycloth wraps around the arm of the furniture forming “sleeve” as it is secured under the arms of the furniture by the Velcro sewn onto the terrycloth, so that it does not slip off the arm of the furniture and, as such, the resulting terrycloth “sleeve” covering the arm of the furniture prevents skin contact with the bare, sun exposed material, often metal, of the furniture, thereby preventing the users skin from being burned.
