A class of introducers is comprised of a plurality of straight sections and at least two curved sections with a predetermined sense of curvature preceded, separated and followed by the straight sections, which introducer is adapted by its shape to access the septal wall or apex of a heart. One of the plurality of straight sections is a distal- most straight section. The straight and curved sections define a predetermined three dimensional shape by means of the distal straight section lying out of plane with respect to the remaining curved and straight sections.
Date of publication of the international search report:
19 April 2007

Date of publication of the revised international search report:
31 May 2007

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

Information about Correction:
see PCT Gazette No. 22/2007 of 31 May 2007
INTERNATIONAL SEARCH REPORT

International application No.
PCT/US06/02460

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - A61N 140/2006.01
USPC - 607/122, 123

According to International Patent Classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification symbols followed by clarification symbols)
IPC(8) - A61B 5/42 (2009.01)
USPC - 607/122,123

Documentation in fields other than minimum documentation to extent that such documents are included in the fields searched

Electronic data bases consulted during the international search (name of data base and, where practicable, search terms used)

USPTO EAST System (US, USPG-PUB, EPO, DERWENT), MPECentanyl
