Title: FREIGHT CAPACITY MAXIMIZATION SYSTEM

Abstract: A system 100 for maximizing freight capacity utilization includes a user interface 102 for receiving shipment data and a database 104 for storing the received shipment data. The user interface 102 receives carrier data, and a means for matching 106 determines shipment data matching the received carrier data. A notifier 108 of the system 100 provides notice of the matched shipment data to the carrier 114. The carrier 114 can bid on a matched shipment corresponding to the matched shipment data, and the notifier 108 notifies the carrier 112 of the bid. If the carrier 112 accepts the bid, the system 100 notifies the carrier 114 of the accepted bid and provides additional information about the shipper 112 such that the shipment can be completed by the carrier 114.
